COMPETITION

Internal Organs (Vol. 2) is closest equivalent in coverage to our book. Similar in that it is a text atlas with meaty captions and clinical applications woven in, set up in 2-page spreads to teach each topic. About two thirds our length with half our art and few if any summary tables. Pricing is what makes them competitive. Our volume is longer and has twice the art.

Leading clinical anatomy reference and textbook with strong standing despite length of (1). Essential Clinical Anatomy, 4/e is more often chosen by students and now adopted by instructors. We compete due to our clinical focus and coverage of internal organs. Our book is exclusively internal organs versus Moore et al. covers all body regions.
The Audiogram Workbook provides students with essential practice in reading and interpreting audiograms. Each case begins with a case history and audiogram, followed by the correct interpretation on the next page.

**SALES HOOKS**
- Each case allows the reader to view and correctly interpret audiograms and to understand case history writing
- Practice audiograms provide students with a “clean slate” to write and create a case history based on audiogram and then interpret results
- The Audiological Interpretation Cheat Sheet assists readers in interpreting audiograms during clinical rotations

This special version of the book gives the reader access to the video content in a handy flash drive, while also providing the option to access the videos online. The updated edition reflects recent advances in orthopaedic traumatology and a wealth of evidence-based, clinical expertise from world-class surgeons. It expands on the award-winning 2007 edition, with a more extensive video library that is notable in depth and breadth. The expertly written and richly illustrated text, coupled with the remarkable video compilation, enable surgeons to augment skills, overcome challenges, perfect surgical techniques, and successfully manage even the most complex cases.

SALES HOOKS
- More than 150 high-quality surgical videos are a superb learning tool
- Videos detail surgical procedures from preoperative planning and patient positioning to suturing the skin, featuring personalized commentary that delivers one-on-one training

1) Court-Brown: *Rockwood and Green’s Fractures in Adults, 8th edition*, 2,769 pages (two volumes), LWW, 2014, $499.99. Comes with enhanced ebook and videos. A landmark book that helps define the field. It should be seen as a competitor even though it covers all aspects of fractures, while Stannard focuses on surgical management.

3) Tornetta: *Operative Techniques in Orthopaedic Trauma Surgery*, 672 pages, LWW, $261.99. This is a step-by-step line drawings book, which is a different approach than Stannard.

4) Wiss: *Master Techniques in Orthopaedic Surgery: Fractures*, 848 pages, LWW, 2012, $249.99. Combination of line drawings and color images describing surgical technique. Stannard is positioned as a more practical, concise, clinical alternative to Browner and Rockwood and Green, yet it offers considerably more coverage than the surgical techniques book. This combination of comprehensiveness but not too much textbook is an appealing concept to orthopaedic surgeons.
The surgical anatomy of the middle ear cleft and mastoid and underlying pathophysiological mechanisms of chronic otitis media are clinically challenging. The editors have compiled a comprehensive textbook with international perspectives on treatment and surgical methodologies – from traditional to newly emerging hybrid – to address the inherent complexities of treating chronic ear disease. This book is an exceptional teaching tool for ear surgeons in training as well as a must-have clinical resource for practicing otolaryngologists.

The renowned authors share their collective wisdom and pearls gleaned from years of treating patients with temporal bone disease and teaching these methodologies to medical students, residents, and fellows. Procedural details are presented throughout 10 detailed chapters, accompanied by beautiful sequential illustrations and videos.

- Videos of cadaveric and surgical dissections highlight critical technical steps and appropriate execution
- More than 160 meticulous, expertly illustrated pen and ink drawings of progressive dissections
- A new chapter on middle ear endoscopy details key anatomical features and technical maneuvers integral to this approach
- New chapters on infratemporal surgical dissection and the intraoperative management of complications are also presented
- Expanded coverage of the middle fossa approach to the internal auditory canal and methods of assessing competencies when training novice surgeons in temporal bone dissection

This is the book that many people used over the years. While it is out of print, PDF copies are easily available on the internet. It is a nice book that is over ten years old but covers the basics well.

This comprehensive volume provides vital support for both novice and experienced practitioners of Neuro-Developmental Treatment (NDT) by integrating the latest theoretical foundations of NDT with real-life practice examples. The book is the culmination of a 5-year project by instructors of the Neuro-Developmental Treatment Association to develop an up-to-date guide to the neurorehabilitation approach originally developed by Karl and Berta Bobath.

COMPETITION
   The book is far more comprehensive than the Buckup. The first chapter is about more or less everything that has to do with muscle testing.

   Big textbook – not comparable to Buckup.

† Author deceased
Aesthetic Rejuvenation of the Face and Neck presents the latest surgical and non-surgical techniques used in facial aesthetic rejuvenation. In the current environment of “lunchtime facelifts” and “light lifts” that often produce poor results, this book fulfills the need for a text that takes a careful, detailed approach to describing high-quality aesthetic facial rejuvenation procedures.

SALES HOOKS
- Written by experts from around the world, most fellowship trained by Dr. Connell
- Presents techniques that provide long-lasting results and are proven to be safe
- Enhanced with more than 650 full-color illustrations and photographs

COMPETITION
2) Regan: Advanced Therapy in Facial Plastic & Reconstructive Surgery, May 2010, 800pp, $250

It is interesting to note that there is limited competition, since so much of aesthetic plastic surgery is done on the face. The author’s marketing questionnaire mentions mostly older titles published a while ago. Lin is a plastic surgeon and the book does focus on aesthetic plastic surgery. Regan is a facial plastic surgeon and this book competes more with Papel than with this book.

DESCRIPTION

This e-book for bachelor and master students facilitates effective learning and is renowned for the quality of its content:

85 short chapters present each topic in a concise manner
Questions at the end of each unit support effective self-examination
Studying can be limited to individual chapters to match specific university curricula

Based on the author’s long teaching experience, this book has been developed from lecture scripts of courses held in the USA and in Germany. It comprises the molecular orbital model to explain covalent bonding in organic molecules, the classes of organic compounds including natural products, polymers and biopolymers, basic concepts (orbital hybridization, resonance, aromaticity), types and mechanisms of organic reactions, and essential aspects of molecular structure such as atom connectivities, skeletal isomerism, conformation, configuration and chirality.

The updated 2nd edition includes 4 new chapters on Selectivity and Specificity of Organic Reactions, Planning Organic Syntheses, Carbon-13 NMR, and two-dimensional NMR.

  Shanghai, P. R. of China

**Description**
Significant advances in metal-catalyzed reactions, especially cyclizations, have dramatically improved the efficiency of organic synthesis over the last three decades. To date these transformations are widely used in the area of synthesis of both natural products and therapeutic agents.

**Sales Hooks**
- Presentation of the most commonly used and significant metal-catalyzed reactions for modern organic synthesis
- Discussion of the basic principles, the current state of the art, scope, limitations, and mechanism of these reactions
- Typical examples of target synthesis are provided to help inspire further applications

**Table of Contents**
epoxidations
aziridinations
cyclopropanations
Pauson-Khand reactions
as well as a wide range of cycloaddition processes, radical cyclizations, and ring-closing metathesis
The rapid pace of evolution in domino, or cascade-based transformations has revolutionized the practice of chemical synthesis for the creation of natural products, designed molecules, and pharmaceuticals. “Science of Synthesis: Applications of Domino Transformations in Organic Synthesis” explores the topic thoroughly and systematically, serving as the basis for practical applications and future research. The 2-volume set presents the cutting-edge in terms of design, strategy, and experimental procedures, leading to multiple events being accomplished within a single reaction vessel. The content is organized by the core type of reaction used to initiate the event, be it a pericyclic reaction, a metal-mediated transformation, radical chemistry, or an acid-induced cascade among many others.

**Volume 1** covers polyene/cation-π cyclizations, metathesis, radical, and metal-mediated reactions, and non-radical skeletal rearrangements.

**Volume 2** covers pericyclic reactions (Diels-Alder, sigmatropic shifts, ene reactions), dearomatizations, and additions to C-O/C-N multiple bonds.

**CONTENTS OVERVIEW**
- polyene/cation-π cyclizations
- the synthesis of polyether natural products by polyepoxide ring-opening
- metathesis
- radical, and metal-mediated reactions
- pericyclic reactions
- Alkylative dearomatization reactions

General Remarks

- For all returns, authorization is granted strictly at the discretion of the publisher, except for faulty, damaged or wrongly delivered titles (see below).
- The basic principle for returns in any one year is that these should not exceed 5% of the previous year’s net turnover for any one company.
- The publisher does not guarantee to send back any products that are outside these returns rules and reserves the right to destroy these without compensation.
- Transport costs for returns are covered by the sender (except for Item 4).

1) Full credit can be granted only if
- prior permission to return has been requested and authorized
- the request for permission to return states invoice number, date, and reason for return
- returns are in mint condition, without defacing marks, stickers or security devices
- the request for return authorization is made at the latest twelve (12) months from invoice date
- returns are made directly to our warehouse address

2) No credit will be granted if products are
- returned without prior authorization
- not returned in a resalable condition as described above
- not accompanied by a delivery note listing invoice numbers and dates
- old or out-of-print editions returned more than three (3) months after publication of the new edition

3) No returns can be accepted or authorized
- if made or requested later than twelve (12) months from invoice date
- if made for the previous edition of a newly published work later than 3 months from publication date
- for offline electronic or audiovisual material for continuation orders, series orders and reduced-price or special priced books or sets
- for books with a selling price value (gross) of less than Euro 50.

4) No prior permission is required for
- imperfect copies
- wrongly delivered books (publisher’s error)

In such cases, please include invoice number, date, and reason for return.
