Interdisciplinary Management of Orbital Diseases
Textbook and Atlas
Hans-Juergen Welkoborsky
Burkhard Wiechens
Michael L. Hinni
2017/383 pp./667 illus./hardcover/

Comprehensive and authoritative discussion of all diseases of the orbital region

This essential addition to your library offers descriptions of topographic and surgical anatomy, pathology, diagnostic steps, imaging, conservative treatment measures, operative approaches, radiotherapy, and orbital reconstruction. Readers will find key information for diagnosing conditions early and achieving maximum therapeutic and aesthetic results.

KEY FEATURES

• Coverage of the spectrum of orbital pathologies and diseases, including congenital malformations and posttraumatic deformities, orbital and skull base tumors and inflammation, sinus complications, thyroid eye disease, and more

• Useful details on patient examination, surgical techniques and pitfalls, and postoperative management aid in daily practice

• Full-color photographs and illustrations that allow for rapid learning and application of concepts

• Videos accessed through Thieme MediaCenter that enhance understanding of surgical procedures

The management of major vitreoretinal diseases has changed dramatically since publication of the first edition in 1999. The field continues to evolve rapidly and is becoming an increasingly complex, multifaceted practice of medicine and surgery. As such, retinal specialists are faced with increasingly sophisticated diagnostic and therapeutic modalities to learn and master. This new, up-to-date, clinically-oriented resource is richly illustrated with color state-of-the art retinal images and surgical procedure drawings. The clinical focus in this book will greatly benefit ophthalmology residents and practitioners.

**KEY FEATURES**

- New technologies including spectral domain optical coherence tomography (OCT), intravitreal injections, and microincisional vitrectomy
- The utilization of multifocal electroretinography, scanning laser ophthalmoscopy, and fundus autofluorescence
- Advances in treatment of macular edema and age-related macular degeneration with anti-VEGF therapy
- Clinical pearls, controversies, and special considerations highlighted in color boxes in every chapter
Leading glaucoma surgeons offer unique perspectives and experience gleaned from developing and mastering state-of-the-art techniques. These groundbreaking ophthalmic surgery approaches are effective, are not bleb-dependent, and result in fewer complications.

€119.99
A significant number of eye disorders result from deficiencies in the endothelial layer of the cornea. Endothelial keratoplasty (EK) helps spare patients from months of refractive adjustments, lengthy recovery, complications, and poor outcomes associated with full-thickness penetrating keratoplasty. This newer methodology is based on more selective transplantation of cells and is less invasive, resulting in quicker recovery and more efficacious outcomes.

**KEY FEATURES**

- A large compendium of high-quality videos demonstrate cutting-edge approaches
- Anterior segment surgery advances including Descemet’s stripping endothelial keratoplasty (DSEK), predescemet’s dothelial keratoplasty (PDEK), ultrathin DSEK, Descemet’s membrane endothelial keratoplasty (DMEK), and trocar anterior chamber maintainer
- Treatment of conditions such as pseudophakic bullous keratopathy and Fuchs’ dystrophy
- Management of complicated cases including glued IOL, cataract extraction & IOL implantation, glaucoma, failed grafts, and scarred corneas

Iqbal Ike K. Ahmed
2016/240 pp./150 illus./hardcover/

Online videos provide real-time learning from the operating room
Throughout three major sections and 28 chapters, top experts share many years of combined wisdom, firsthand tips, and extensive skills acquired from utilizing and refining IOL techniques. The comprehensive, richly illustrated text and accompanying surgical videos provide invaluable training on how to handle even the most complex cases, including strategies for overcoming obstacles such as compromised capsular support.

Neuro-Ophthalmology Illustrated
Second Edition
Valérie Biousse
Nancy J. Newman
2016/664 pp./913 illus./softcover/

Written by two of the most prominent neuro-ophthalmologists in the world

Neuro-Ophthalmology Illustrated, Second Edition, is an up-to-date, beautifully illustrated text that guides readers in recognizing signs and symptoms, localizing pathology, developing a differential diagnosis, and selecting a management strategy. It offers step-by-step guidance on performing examinations and covers disorders of the visual afferent system, the pupil, ocular motor efferent systems, and the orbit and lid.

Phacoemulsification and Intraocular Lens Implantation
Mastering Techniques and Complications in Cataract Surgery
Second Edition
William J. Fishkind
2017/572 pp./643 illus./hardcover/

The first book to analyze virtually all complications of phacoemulsification surgery

From phacoemulsification problems and vitrectomy to hydrodissection, hydrodileneation, and phaco-trabeculectomy complications, this outstanding guide is essential for anybody performing cataract surgery. Solutions are provided for all situations, from simple problems to the most complex—all described by a “who’s who” of leading specialists and educators.

KEY FEATURES OF THIS NEW CLINICAL REFERENCE
• Contributions from the best known surgeons and educators in the world
• Shows correct surgical techniques so that complications can be seen in the appropriate clinical context
• Nearly 300 detailed, full-color illustrations clarify all concepts and help you visualize key points
• Offers tips on anticipating problems that lead to complications
• Provides detailed, step-by-step instructions on how to manage problems after they occur
