ACI Open
Author Instructions

Thank you for contributing to ACI Open. Please read the instructions carefully and observe all the directions given. Failure to do so may result in unnecessary delays in publishing your article.

Find out more about Open Access at Thieme at http://open.thieme.com

SUBMISSION CHECKLIST
All manuscripts must be submitted at the following link:
https://mc.manuscriptcentral.com/aciopen

☐ AUTHOR INFORMATION
  - All authors: full name, department, affiliation
  - Corresponding author: full name, degrees, department, affiliation, mailing address, telephone and fax number, e-mail address

☐ MANUSCRIPT FILE
  - Must be digital - hard copy submissions are not accepted

☐ ABSTRACT AND KEYWORDS
  - See the section Article Types for word limit

☐ REFERENCES
  - Cited sequentially in AMA style

☐ FIGURES AND TABLES
  - Cited sequentially in the main document, must be saved separately from the main document

☐ ART FILES
  - Must be saved separately from the main document

☐ PERMISSIONS
  - Required if you plan to reproduce content from a published source or include a photograph of a patient
  - Patient permission form included at the end of this document

☐ ETHICAL POLICIES & CONFLICT OF INTEREST
  - Authors are required to disclose any conflict of interest as per ICMJE COI guidelines and form
  - Declaration to be accompanied with studies involving human or animal participants

- **Research Articles:** Research Articles contain original work based on original research or experimentation not previously published or under consideration by another journal.

- **Reviews:** Reviews contain a state of the art review and summary of a specific subject relevant to ACI Open. Reviews may be solicited by the editorial board based on a perceived need for discussion of a specific topic.

- **State of the Art / Best Practice Paper:** State of the Art / Best Practice Papers would be generally solicited contributions that describe the state of the art in a particular area of Clinical Informatics. These papers will be based on published research and personal experience with the topic. They will be heavily geared towards lessons learned, best approaches, safety and quality considerations, and outcomes. These submissions are intended to serve as an evidence-based summary of current thinking and practice on an issue with the aim of providing individuals and organizations with a condensed, practical, highly applicable resource relating to an applied clinical informatics issue. They may also signal areas for future research. Systematic literature reviews are not required for this type of submission.

- **Case reports:** Case reports are intended to be an ACI Open equivalent to case reports in clinical medicine. However, the focus in case reports will be an information system. Case reports focus on cases of interest with the emphasis on „lessons learned“. Case reports that focus on failures or successes and their analysis are preferred. Short case reports are preferred and they should not exceed 2,000 words.

- **Letters to the Editor:** Letters include short highlights of applied clinical informatics that are significant enough for dissemination in ACI Open. Letters do not require keywords and summary, and should not exceed 2,000 words (ca. 14,000 characters). They should include no more than one table or figure, respectively. Letters to the editor also undergo a review process.
• **Editorials:** Editorials allow an expert to provide an opinion on a specific topic relevant to ACI Open. Editorials may be solicited by the editorial board based on a perceived need for discussion of a specific topic and should not exceed 1,500 words.
General Guidelines

- You must submit a digital copy of your manuscript. Hard copy submissions are not accepted.
- Keep the format of your manuscript simple and clear. We will set your manuscript according to our style—do not try to “design” the document.
- The manuscript, including the title page, abstract and keywords, text, references, figure captions, and tables should be typewritten, double-spaced in 12-point font with 1-inch margins all around and saved as one file.
- Each figure should be saved as its own separate file. Do not embed figures within the manuscript file. This requires special handling by Thieme’s Production Department.
- Keep abbreviations to a minimum and be sure to explain all of them the first time they are used in the text.
- The manuscripts should be written in consistent British or American English.
- The authors should use Système International (SI) measurements. For clarity, nonmetric equivalents may be included in parentheses following the SI measurements.
- Use generic names for drugs. You may cite proprietary names in parentheses along with the name and location of the manufacturer.
- Credit suppliers and manufacturers of equipment, drugs, and other brand-name material mentioned in the manuscript within parentheses, giving the company name and primary location.

Topics of interest for Applied Clinical Informatics Open include (but are not limited to):

Clinical information systems
Electronic health records and systems, personal health records, physician/provider order entry, electronic prescribing, clinical decision support, nursing information systems, patient scheduling and tracking tools, lab information systems, radiology information systems, PACS, Clinical Decision Support tools, Mobile Health system, GP information systems; Personal Health Records, mobile health technology.

Administrative and management systems
Practice management, patient notification and communications, drug and resource management, provider scheduling, forecasting and business intelligence, billing systems, quality/safety surveillance and reporting, innovative data reuse and research (data warehousing and data marts);

eHealth systems
Electronic communication among patients, providers and other stakeholders, electronic health systems, distributed services, wireless and mobile technologies for health care, telemedicine and telehealth, digital libraries, health information exchange;

Information technology development and deployment
Needs assessment and discovery, abstraction and design of systems, operationalization, selection and implementation, realization and operation, organizational and team barriers, project management, IT management;

Evaluation of information technology
Benefits and impact assessments, unexpected consequences, workflow evaluation, implications for safety and quality, system-related errors, application of evaluation methodology and evaluation guidelines, certification of information technology;

Socio-technical aspects of information technology
Implementation strategies and processes, privacy, security and information assurance, interdisciplinary workflows, workarounds, distinctions between ambulatory and inpatient workflows, diffusion of innovation,
barriers and failures, unintended consequences of HIT, organizational and team cultures, work practice innovation, communication processes, consumer involvement, user acceptance;

**Health IT training**
Training and education, requirements and strategies for training, analysis of effectiveness of training.
**MANUSCRIPT FORMAT continued**

Pages are to be numbered consecutively beginning with the title page, starting with Arabic numeral 1. Research papers should be organized into: Abstract, Background and Significance, Objectives, Methods, Results, Discussion, Conclusions, Clinical Relevance Statement, Conflict of Interest, Human Subjects Protections, Acknowledgments, and References. Tables are to be placed at the end of the manuscript as word tables. Figures and legends are to be referenced within the paper but must be uploaded separately.

**Blinding of Manuscript**
Submissions to ACI Open will be subject to a double-blinded peer review process in the primary review. This means that the authors are not aware who conducts the review, but also that the reviewer does not know the identities and institutions of the authors. This should guarantee a fair and un-biased review of the paper. The authors are thus responsible for masking any identifying information in the article (e.g., from the title, content, tables and figures, funding sources, acknowledgements, citations and conflict disclosures) that would allow the reviewer to deduce the organization or identity of the authors by changing the identifiable information to „XXX“. Identifying information includes names of authors, initials of authors, names and initials of contributors and those acknowledged, the names of the institution(s) where the research was conducted or where the authors are affiliated, references to prior work by the authors that is identified in the manuscript as such, funding numbers that can be traced to specific grants, and similar. The Managing Editor will review submissions prior to peer review to verify sufficient blinding. Any paper that is not adequately blinded will be returned to the author without review. Once accepted (with or without required edits), the authors must un-mask the information prior to publication.

**Title Page**
Because ACI Open conducts blinded peer-review, when uploading your manuscript you will need to upload a manuscript file with no identifying author information (designate as Main Document - Anonymous) and a separate title page (designate as Title Page) with author details. Please include all author names and affiliations, correspondence author and contact information, Acknowledgments, Funding, Author Contributions and Conflict of interest statements.

**Funding**
Authors should provide all relevant information regarding the funding which was received, including any provision of experimental materials, equipment, writing assistance, or related. It should also be stated what role the research funder had, for instance, whether they were also involved in other aspects of the study such as the design. This information will be published with the paper, should it be accepted. If no funding was received, please state this.

**Abstract and Keywords**
See the section Article Types for word limits.

The Abstract should not exceed 300 words. It should include the following headings: Background (optional), Objectives, Methods, Results, and Conclusions and should be on a separate page. Keywords (no more than 5) that describe the contents of the submission should be included on a separate line below the Abstract. Terms from the Medical Subject Headings® (http://www.nlm.nih.gov/mesh/MBrowser.html) should be used (to facilitate indexing and retrieval). A minimum of two (2) keywords must be selected from the menu of keywords provided by ACI Open.
Main Document

- Please clearly distinguish the hierarchy of headings within the manuscript by using capital letters, underline, italic, and bold styles as necessary.
- As needed, use italic, superscripts, subscripts, and boldface, but otherwise do not use multiple fonts and font sizes.
- Do not insert page or section breaks except where noted in the Author Instructions.
- Use hard returns (the Enter key) only at the end of a paragraph, not at the end of a line. Allow lines of text to break automatically in your word-processing software. Do not justify your text.
- Use only one space, not two, after periods.
- Create tables using the Table function in Microsoft Word.

Submissions are to be double-spaced. Text is to be 12 point type in Times New Roman font. Headings (Background and Significance, Objectives, Methods, Results, Discussion, Conclusions) are to be numbered sequentially (e.g., 1. Background and Significance; 2. Objectives). Subheadings should be used where appropriate and may be numbered sequentially using decimal points (e.g., 1.1. Background first subheading; 1.2. Background second subheading). Paragraphs should be indented without extra line spacing.
Clinical Relevance Statement
As the journal focuses on facilitating the translation of research results into practice, authors must provide a short paragraph with no more than 3 succinct sentences that discusses the implications of results for practitioners and/or consumers. This should be placed following the Conclusions and before the References.

Multiple Choice Questions
Authors are asked to add 1–2 multiple choice questions after the conclusions in the paper. The questions should be pertinent to the content of your paper. Authors must pay close attention to the following instructions: Each question will have a short stem, for example „When implementing an Electronic Health Record, which of the following must have close attention to avoid severe interruption to clinical work?“ Authors should not include negation (not, least likely, wrong) into the stem. Each question must have four answers of which three are wrong and one is clearly correct. (For example: A. Hardware, B. Vendor, C. Workflow, D. Health Information Exchange) All answers should be similar in structure and design. Authors should avoid making the correct answer the longest if possible. All answers should be logical choices based on the stem. Authors should indicate the correct answer and provide an explanation (1–3 paragraphs) why it is the correct choice.

Thieme Editing Services
Thieme offers a language editing service for manuscripts, abstracts and theses in partnership with Enago, a world-leading provider of author services to researchers around the world. Authors can choose from a range of editing services and get their manuscripts edited by Enago’s professional medical editors. Authors that wish to use this service will receive a 20% discount on all editing services. To find out more information or get a quote, please visit https://www.enago.com/thieme

Acknowledgments
Scientific advice, technical assistance, and credit for financial support and materials may be grouped in a section headed ‘Acknowledgment(s)’ that will appear at the end of the text (immediately after the Protection of Human and Animal Subjects section). This section must be blinded prior to submission of the manuscript and then unblinded for accepted manuscripts prior to publication.

Protection of Human and Animal Subjects
All manuscripts must include language either describing the steps taken to protect human and/or animal subjects, or a statement acknowledging that human and/or animal subjects were not included in the project. An example of basic language for human subjects protections would be: “The study was performed in compliance with the World Medical Association Declaration of Helsinki on Ethical Principles for Medical Research Involving Human Subjects, and was reviewed by XXX Institutional Review Board.”

Conflict of Interest
Please click http://www.icmje.org/conflicts-of-interest to download a Conflict of Interest form. This should also be uploaded and designated as Title page to assure blinding.
MANUSCRIPT FORMAT continued

References

References should be the most recent and pertinent literature available. It is essential that they are complete and thoroughly checked. If the reference information is incomplete, good online sites to search for full details are the National Library of Medicine: www.nlm.nih.gov; Books in Print: www.booksinprint.com; PubMed: www.ncbi.nlm.nih.gov/PubMed/; or individual publisher Web sites.

- References must be listed in AMA style, using Index Medicus journal title abbreviations.
- References follow the article text. Insert a page break between the end of text and the start of references.
- References must be cited sequentially (NOT alphabetically) in the text using superscript numbers.
- By way of exception to AMA style, do not italicize book titles or journal title abbreviations and do not put a period at the end of a reference.
- List all author names, up to and including six names. For more than six authors, list the first three followed by et al.
- References should be styled per the following examples:

1. Citing a journal article:

2. Citing a chapter in a book:

3. Citing a book:
   Stryer L. Biochemistry. 2nd ed. San Francisco: WH Freeman; 1981:559–596

4. Citing a thesis:

5. Citing a government publication:

6. Citing an online article:

7. Citing a symposium article:
   Eisenberg J. Market forces and physician workforce reform: why they may not work. Paper presented at: Annual Meeting of the Association of American Medical Colleges; October 28, 1995; Washington, DC
**Figure Captions**

- Figures include photographs or radiographs, drawings, graphs, bar charts, flow charts, and pathways, but NOT lists or tables.
- Figures must be cited sequentially in the text. Number all figures (and corresponding figure captions) sequentially in the order they are cited in the text.
- Figure captions should be written after the reference list. Insert a page break between the end of references and the start of figure captions.
- Figure captions should include a description of the figure and/or each lettered part (A, B, etc.) and of any portions of the figure highlighted by arrows, arrowheads, asterisks, etc.
- For a figure borrowed or adapted from another publication (used with permission), add a credit line in parentheses at the end of each figure legend. This credit line should be a complete bibliographic listing of the source publication (as a reference), or other credit line as supplied by the copyright holder. For example (Reprinted with permission from Calfee DR, Wispelwey B. Brain abscess. Semin Neurol 2000;20:357.)

**Tables**

- Data given in tables should be commented on but not repeated in the text. Be sure that lists or columns of related data are composed in a word-processing program like the rest of the text.
- Do not intersperse tables in the text. Tables should appear after the figure captions. Insert a page break between the end of the figure captions and the start of the tables.
- Tables must be double-spaced and numbered in the same sequence they are cited in the text. A short descriptive title should be provided for each table.
- If a table contains artwork, supply the artwork separately as a digital file.
- For tables borrowed or adapted from another publication (used with permission), add a credit line as the first footnote beneath each table. This credit line should be a complete bibliographical listing of the source publication (as a reference), or other credit line as supplied by the copyright holder. For example, “Reprinted with permission from Calfee DR, Wispelwey B. Brain abscess. Semin Neurol 2000;20:357.” (“Data from . . .” or “Adapted from . . .” may also be used, as appropriate.)
- Other footnotes for tables should be indicated in the table using superscript letters in alphabetical order.
- Any abbreviations used in the table should be explained at the end of the table in a footnote.

**Formulas**

Mathematical, logical, computer and chemical formulas within documents should be reviewed carefully prior to submission for accuracy and clarity

- For mathematical and logical formulas, equation editor tools contained within word processors (For Microsoft Word: Microsoft Equation; For Open Office: Math) should be used. If other systems (ie LaTex) are used, it may be preferable to save the formula as an image file (.TIF or .PNG)
  - Within figures, formulas and equations should be formatted as part of the image file (.TIF or .PNG)
  - Within tables, formulas, equations and calculations may be formatted using the word processor equation editors
  - Within text, individual formulas, equations, and calculations should be presented as separate lines that present numbers and variables clearly.
- For chemical and other formulas, equations and maps (such as Unified Modeling Language (UML) diagrams) should be used.
  - Standard nomenclature should be used whenever possible
  - A legend that clearly explains the meaning of each formula and equation should be included. The legend should be able to stand separately from the text of the manuscript.
  - Formulas/equations/maps/diagrams should be saved as image files (.TIF or .PNG)

**Videos**

- The following formats are acceptable: *.avi, *.mov and *.mpg.
• For supplementary videos, the length should not exceed 4 minutes, and a legend of no more than 40 words per video or per sequence is required (it should also be included in the main document).
• If including a voice over, it must be in clear English. Be precise, informative, and clear in your speech. Re-record audio in post-production for sound quality.
DIGITAL ARTWORK PREPARATION

General Guidelines

- It is best to use Adobe Photoshop to create and save images, and Adobe Illustrator for line art and labels.
- Do not submit art created in Microsoft Excel, Word, or PowerPoint. These files cannot be used by the typesetter.
- Save each figure in a separate file.
- Do not compress files.
- All black-and-white and color artwork should be at a resolution of 300 dpi (dots per inch) in TIFF format. Line art should be 1,200 dpi in EPS or TIFF format. Contact the Production Editor at Thieme if you are unsure of the final size.
- It is preferable for figures to be cropped to their final size (approximately 3½ inches for a single column and up to 7 inches for a double column), or larger, and in the correct orientation. If art is submitted smaller and then has to be enlarged, its resolution (dpi) and clarity will decrease.

Note: Lower resolutions (less than 300 dpi) and JPEG format (.jpg extension) for grayscale and color artwork are strongly discouraged due to the poor quality they yield in printing, which requires 300 dpi resolution for sharp, clear, detailed images. JPEG format, by definition, is a lower resolution (compressed) format designed for quick upload on computer screens.

Black-and-White Art

- Black-and-white artwork can be halftone (or grayscale) photographs, radiographs, drawings, line art, graphs, and flowcharts. Thieme will only accept digital artwork.
- If possible, do not send color art for conversion to black-and-white. Do the conversion yourself so that you can check the results and confirm in advance that no critical details are lost or obscured by the change to black-and-white.
- For best results, line art should be black on a white background. Lines and type should be clean and evenly dark. Avoid screens or cross-hatching, as they can darken or be uneven in printing and lead to unacceptable printing quality.

Color Art

- All color artwork should be saved in CMYK, not RGB.

Art Labels

- Arrows, asterisks, and arrowheads (or other markers) should be white in dark or black areas and black in light or white areas, and large in size. If not, these highlighting marks may become difficult to see when figures are reduced in size during the typesetting process.
- Use 1-point (or thicker) rules and leader lines.
- Capitalize the first word of each label and all proper nouns. Consider using all capitals if you need a higher level of labels.
- Where there are alternate terms or spellings for a named structure, use the most common one and make sure it is consistent with what is used in the text.
- Avoid using multiple fonts and font sizes for the labels; use only one or two sizes of a serif font.
SUBMISSION PROCEDURE

Article Processing Charge (APC)

During the submission process, you will be prompted to confirm that you accept to pay the APC if your manuscript should be chosen for publication. Please refer to the first page of this document for the exact pricing. You will be billed based on the year in which you submitted your manuscript, but you will not receive the bill until and unless your manuscript has been accepted for publication.

Submission Procedure

- Consult the checklist on the first page of this document to ensure that you are ready to submit your manuscript.
- Manuscripts must be submitted electronically at the following link: https://mc.manuscriptcentral.com/acipopen
- Always review your manuscript before submitting it. You may stop a submission at any phase and save it to submit later. After submission, you will receive a confirmation email. You can also check the status of your manuscript by logging in to the submission system. The Editor in Chief will inform you via email once a decision has been made.

Revision Procedure

- Should the editors decide that your article requires a revision, you will need to make the changes via a word-processing program and resubmit it electronically.
- Log in to the submission system and find your article, which will be marked for revision.
- The best way to make revisions to your manuscript is by enabling the Track Changes mode in Microsoft Word, which will automatically highlight and mark up revised text. Please submit both a marked up copy and a clean copy of your revised manuscript to the submission system.
- Your original files will still be available after you upload your revised manuscript, so you should delete any redundant files before completing the submission.
- You will also be provided space in which to respond to the reviewers' and editors' comments. Please be as specific as possible in your response.

PRODUCTION PROCEDURE

Page Proofs

Page proofs will be sent to you via email. The proofs will be in a PDF file format, which should be opened using Acrobat Reader software. You will receive further instructions with your proofs. Take this opportunity to check the typeset text for typographic and related errors. Elective alterations are difficult to accommodate owing to the associated time and expense of introducing them. Therefore, please be sure that when you submit your manuscript, it is accurate, complete, and final.
POLICY STATEMENTS

Statement on Liability

The legislation on product liability makes increased demands on the duty of care to be exercised by authors of scientific research and medical publications. This applies in particular to papers and publications containing therapeutic directions or instructions and doses or dosage schedules. We therefore request you to examine with particular care, also in your own interest, the factual correctness of the contents of your manuscript once it has been copyedited and returned to you in the form of galley proofs. The responsibility for the correctness of data and statements made in the manuscript rests entirely with the author.

Definition of Authorship

Authorship credit should be based on criteria established by the International Committee of Medical Journal Editors. Each author should have made the following contributions towards the completion of the manuscript:

1. Substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data
2. Drafting the article or revising it critically for important intellectual content
3. Final approval of the version to be published

Copyright Statement

Submitted manuscripts must represent original research not previously published nor being considered for publication elsewhere. The editors and Thieme combat plagiarism, double publication, and scientific misconduct with the software CrossCheck powered by iThenticate. Your manuscript may be subject to an investigation and retraction if plagiarism is suspected.

If you plan to reproduce text, tables, or figures from a published source, you must first obtain written permission from the copyright holder (usually the publisher). This is required even if the material is from your own published work. For material never before published and given to you by another person, you must obtain permission from that person. Serious delays to publication can be incurred if permissions are not obtained.

As the author, it is your responsibility to obtain all permissions, pay any permission fees, furnish copies of permissions to Thieme with your manuscript, and include a credit line at the end of the figure caption, beneath the table, or in a text footnote.

Upon publication of an article, all rights are held by the publishers, including the rights to reproduce all or part of any publication. The reproduction of articles or illustrations without prior consent from the publisher is prohibited.

Statement of Ethics

This journal adheres to the ethical standards described by the Committee on Publication Ethics and the International Committee of Medical Journal Editors. Authors are expected to adhere to these standards.

For all manuscripts reporting data from studies involving human or animal participants, formal review and approval, or formal review and waiver (exemption), by an appropriate institutional review board (IRB) or ethics committee is required, as well as any necessary HIPAA consent, and should be described in the Methods section with the full name of the reviewing entity. All clinical trials must be registered in a public trials registry. Denote the registry and registry number.

Patient Permission Policy

You must obtain a signed patient permission form for every patient whose recognizable photograph will be used. If you do not supply this, the identity of the patient must be obscured before the image is published; this could interfere with the instructive value of the photograph. Attached below is a sample patient permission form.
EDITORIAL CONTACTS

Please contact the Editors or Thieme Publishers with any questions.

Schattauer Publishers – Managing Editor
Dr. Elinor Switzer
Schattauer GmbH
Hölderlinstr. 3
70174 Stuttgart
Germany

Statement of Consent

The use of images (and videos) is essential for the progress of science and medical and dental treatment.

For this reason, I hereby grant my consent for Thieme Medical Publishers, Inc. and other publishing houses to use all images and videos produced as a result of my treatment for scientific or educational purposes, even though my identity/my child's identity may be recognized. This includes the publication and reproduction in scientific journals, textbooks, scientific documentation, and electronic media forms (e.g. educational film, CD-ROM, DVD, electronic paper, databases, internet, etc.) This also includes usage as a cover illustration or for advertisement of such publications.

I also grant consent to link the illustrations with the clinical picture and medical therapy.
