Good Medicine and Good Health
Care Demand Good Information

General Remarks
Methods of Information in Medicine is an official journal of the International Medical Informatics Association (IMIA), of the European Federation of Medical Informatics (EFMI) and the international official journal of the German Association for Medical Informatics, Biometry and Epidemiology (GMDS, in German only). Methods of Information in Medicine is directed towards the methodology and scientific fundamentals of organizing, representing and analyzing data, information and knowledge in biomedicine and health care. Publications include new methods in biomedical and health informatics, biomedical statistics and epidemiology covering biomedically and clinically motivated approaches for:
- Information documentation, storage, and retrieval
- Knowledge management and discovery
- Data integration and interoperability
- Natural language processing and text mining
- Statistical modeling and analysis
- Data linkage
- Predictive modeling and simulation
- Software engineering and evaluation

Journal Policies and Guidelines
This journal follows the guidelines of the International Committee of Medical Journal Editors, the Committee on Publication Ethics and the Proposals for Safeguarding Good Scientific Practice of the German Research Foundation. Authors must acknowledge the following when submitting manuscripts:

Authorship
All authors must have made substantial contributions to
(1) conception and design, acquisition of data and/or analysis/interpretation of data and (2) drafting and/or critical revision of the manuscript.
All listed authors must approve the version to be published.

Conflicts of interest
All listed authors must disclose any and all financial and personal relationships with other people or organisations that may inappropriately influence or bias the objectivity of submitted content and/or its acceptance for publication in this journal. This disclosure must be included in the text of the manuscript and will be available to the peer reviewers.

Ethical considerations
All authors submitting manuscripts on research involving human subjects must indicate that the study has been reviewed in compliance with ethical standards of the responsible committee on human experimentation (institutional and/or national as pertinent) and with the World Medical Association Declaration of Helsinki on Ethical Principles for Medical Research Involving Human Subjects.

Submission Types
Original articles
Research articles that contain original work based on original research or experimentation not previously published or under consideration by another journal.

Original articles for a Focus Theme
From time to time, the journal publishes articles on current research topics in form of particular focus themes as part of a journal’s issue. Focus themes are managed by guest editors who are experts in the proposed topic and organized through an open call. Calls for focus themes are announced on the journal’s homepage well in advance of the deadline. Experts who are interested in proposing focus themes and in serving as guest editors may send a letter of request to the editor-in-chief of Methods of Information in Medicine at ed@MethodsInfMed.org.

Editorials
Editorials allow an expert to provide an opinion on a specific topic relevant to Methods of Information in Medicine. Editorials may be solicited by the editorial board based on a perceived need for discussion of a specific topic and should not exceed 1,500 words.

Letters to the Editor
Letters contain manuscripts directly discussing an article published in Methods of Information in Medicine within the last two years. Letters do not require keywords and summary and should not exceed 1,500 words. They should include no more than one table or figure, respectively.

Other type of manuscript
Review articles
A comprehensive review of prior publications relating to a specific subject relevant to Methods of Information in Medicine. Systematic reviews should follow the PRISMA guidelines. Meta-analysis of observational studies should follow the MOOSE guidelines. Please consult the EQUATOR web site for appropriate reporting guidelines.

For-discussion articles
Authors may be invited by the editors to submit papers discussing controversial scientific topics. Such For-discussion papers will be analysed and discussed by field experts.

Short papers
Short papers not exceeding 1,500 words including references, accompanied by a table or figure may be accepted for publication if they serve to promote communication of new ideas, upcoming methods or case studies.

Manuscript Preparation
Authors are kindly requested to carefully follow all instructions on how to write a paper. In cases where the instructions are not followed, the paper will be returned immediately with a request for changes, and the editorial review process will only start when the paper has been resubmitted in the correct style.

Permission and copyright
Authors are responsible for obtaining permission to reproduce any copyrighted material and this permission should be acknowledged in the paper. Authors should not use the names of patients. Patients should not be recognizable from photographs, unless their written permission has first been obtained. This permission should be acknowledged in the paper.

Language
Contributions are submitted in the English language of the authors. If English is not the first language of the authors, then it may be of benefit to seek help from a native English speaker before submitting the article. Professional English-language editing resources can be found here http://methods.schattauer.de/en/authors/english-language-help.html

Formatting and blinding
There is no template for submitting to Methods of Information in Medicine, but authors should use double line spacing, include line and page numbering and use only one column. The manuscript must be saved in Microsoft Word format (.docx, .doc), Rich Text Format (.rtf), or TeX format (.tex). For finally accepted manuscripts in TeX format, the author must cover additional processing fees of 200 € + 19 % VAT (within EU) prior to copy editing of the manuscript.

As we apply a double-blind review process, it is important that authors blind any information that might identify them in both the manuscript (cf title page and references) and the replies to reviewers. All identification information should...
therefore be removed. This includes author names, initials, institutions, countries and cities, as well as information which may appear in images or figures. Either “Blinded” or “xxx” can be used as placeholder. Should the paper be accepted, this information will be added back in.

The submission must be organised at least in two main files, as follows:
- A Title Page, to be uploaded as a Supplementary file;
- A main text, to be uploaded as Main Document file;
- Other materials can be uploaded as Supplementary files.

The main text must be organized into the following sections:

**Title, Summary and Keywords, Introduction, Objectives, Methods, Results, Discussion, Conclusions, Acknowledgments and References.**

Apart from the main headings, such as Introduction and Methods, subheadings should be used where appropriate and may be numbered.

Authors should add a sub-section “Ethical considerations” at the end of the methods section. Authors should here state the name and location of the Ethical Review Board, the file number of the decision and the name of the ERB chair. Manuscripts on research not involving human subjects must include a statement of that fact in the text of the manuscript.

**Title Page**

The title page of the article must contain:
- a concise but informative title of the paper
- initial(s) and last name of each author, followed by their institutional affiliation(s)
- the name and address of the corresponding author (plus telephone, fax, e-mail address)

**Title, Summary and Keywords**

The title must be typed on the first page of the document, as a separate page. The Summary must be typed on a separate page and structured as shown below. At the end of the Summary, the contents of the paper should be specified by keywords. We recommend using MeSH keywords.
- Background (optional)
- Objectives
- Methods
- Results
- Conclusions
- Keywords

**Figures and Tables**

Figures and tables should be of high quality and suitable for reproduction. Type size should be chosen so that any reduction in the width of the columns will not affect legibility. Use a uniform type size, and avoid borders around tables and figures. Figures and tables must be numbered consecutively using Arabic numbers (e.g. “Table 2” respectively “Figure 3”). A self-explanatory and concise legend must appear at the top of each table and at the bottom of each figure. Figures and tables must be referenced in the manuscript by their number (e.g. ‘as shown on Table 2’). Any figures (including screenshots or handouts) and tables containing other languages than English must also be provided in a complete translated English version to ensure proper peer review.

In case of acceptance, figures must be sent to the editorial office as digital documents. Save graphics in .tif and .eps format (not in .doc) with a minimum resolution of 800 dpi (line drawings) or 300 dpi (photos, screen pictures). It is important to save your figures with a clear, descriptive file name such as “figure1.tif”.

**Formulas**

Special care should be taken with the presentation of formulas. In order to save formulas into your document in a manner that will ensure their accurate appearance in the system-generated proof, create the formulas as text. Check that any ‘dots’, ‘dashes’, ‘minus signs’, etc. are legible and not likely to be misinterpreted.

**Acknowledgments**

Scientific advice, technical assistance and credit for financial support and materials may be grouped in a section headed ‘Acknowledgment(s)’ that will appear at the end of the text.

**References**

In the text, number the references consecutively in the order in which they first appear, using Arabic numerals in square brackets (example [1]). The reference list should look like the examples below. Use the style, which is based on the formats used by the US National Library of Medicine in MEDLINE (sometimes called the ‘Vancouver style’). For details see the guidelines from the International Committee of Medical Journal Editors (http://www.nlm.nih.gov/bsd/uniform_requirements.html ). The first six authors of a paper should be listed by name, followed by et al.

**Examples:**

**Journal article**

**Journal article (in language other than English) – 2 possibilities**

(N.B. Use if there exists an English title in PubMed)

(N.B. Use if there does not exist an English title in PubMed)

**Conference paper**

**Book**

**Internet resource**

**Non-English Internet resource**

**Appendices**

Manuscript attachments and appendices will be published “as is” only online. The editor will decide at latest with acceptance of a manuscript, whether an appendix is essential for a publi-

Instructions to Authors

Manuscript Submission

Methods of Information in Medicine has two different submission tracks, Methods traditional submission publication print/online (“Methods Print”) and “Methods Open” (as described and illustrated here: http://methods.schattauer.de/fileadmin/assets/zeitschriften/methods/MethodsOpen.pdf). Applying an identical double-blind reviewing process, submissions to Methods Print are available in print and online and submissions to Methods Open are only available online as open access. Please note that both tracks belong to the same journal and there is no difference in impact factor between the two tracks.

All submissions must be entered online at http://mc.manuscriptcentral.com/methods. Please check the proof that is generated by the Manuscript Central system carefully, especially all Greek letters, other special characters, and formulas. The proof is the version seen by the editor and reviewers. If you have any difficulties submitting your manuscript online, please contact Marie Lind, editorial assistant, in the editorial office, by e-mail ed@MethodsInfMed.org

Peer Review

All manuscripts submitted to the journal will first be checked by the editorial assistant to ensure they conform with the guidelines listed in this document. If manuscripts fail to meet the editorial requirements, authors will be asked to revise and resubmit before the manuscripts will be sent into the review process. Manuscripts that enter the review process will be examined by at least two, in most cases by three independent reviewers. They will be asked to comment on the significance of the work, including its scientific impact and importance to the field, quality of scientific and/or technical content, originality and innovativeness, reference to related literature, organization and clarity of expression. The entire review process is double-blinded: the authors do not know who is reviewing the paper, and the reviewers do not know who the authors are or where they come from. The final decision concerning acceptance or rejection of articles will be at the discretion of the editor-in-chief and the associate editors.

Proofs and Reprints

Galley proofs will be sent to the author to check for typesetting accuracy. No changes to the original typescript are accepted at this stage. Proofs with corrections must be returned within 48 hours of receipt. For submissions to Methods Print, reprints may be ordered at the prices shown on the publisher’s order form that is sent together with the proofs.

Methods Print – Fees

The first 5 pages in print of an article are free of charge (i.e., about 22,000 characters including space bars; please deduct 1,500 characters including space bars for each figure or table). Online supplementary material is also free of charge, which allows authors to include additional information without exceeding the 5-page print limit. Authors who submit an article that exceeds 5 pages in print (including references, figures and tables) will be charged 125€ for each page exceeding the number of 5 pages. For color illustrations 350€ + 19% VAT (within EU) per page will be charged to the author for the first figure. If further color figures fit on the same page, additional 75€ + 19% VAT (within EU) will be charged per figure. The sum is to be paid to the publisher before the article is published.

Methods Open – Article Publication Charge

Authors who submit to the Methods Open track will have their articles made available open access very fast after acceptance and upon receipt of the payment of the Article Publication Charge, APC – see below. The accepted manuscript will receive a DOI number after copyediting and typesetting and will be published freely accessible on the journal internet homepage (“Methods Open”). In parallel, the article metadata will be reported to databases such as Medline/PubMed and the article will be linked to those databases. From this point onwards the full-text article will be freely online accessible to all readers worldwide but will not be included in the traditional Methods printed issue. For Methods Open articles a fee (Article Publication Charge, APC) is required. The APC for Methods Open amounts to 1,650€ + 19% VAT (within EU) per article. Journal reviewers are eligible for a 10% discount. Interested authors may contact the respective journal editors.

Electronic Support

The Instructions to Authors are also available at the journal’s web site
http://www.methods-online.com

Online Access

Once published, all articles appear online at http://www.methods-online.com

The German Copyright law applies to usage of the articles.

Schattauer Copyright Permission and Self-Archiving Policy

Methods Print

Written permission is required to reproduce material from Schattauer GmbH publications in other publications, electronic products or other media. To obtain a copyright permission please contact Karola Kalff, karola.kalff@schattauer.de, fax: +497112298775. You may fax or e-mail your request along with the full citation of the journal in which the paper appears, in with volume number and page number(s) as well as what you are requesting to use the material for. Use of copyrighted material always requires proper citation.

Personal/Non-commercial Use

No copyright permission request is necessary from original authors, posting a pre-print (i.e., submitted, but not yet accepted) version of their article on their own web site or uploading it to institutional and/or centrally organized repositories. In this case the article must include the following statement: “This article is not an exact copy of the original published article in Methods of Information in Medicine. The definitive publisher-authenticated version of [insert complete citation information here] is available online at: [insert URL here].”

An author of an article is also allowed to include the article in a thesis or dissertation, provided that it is not to be published commercially.

Posting and uploading of the accepted, but not typeset and edited version is allowed only after a 12-month embargo period, after the publishing date according to the Schattauer copyright policy.

Methods Open

The articles will be published under the Creative Commons License CC-BY-NC-ND (www.creativecommons.org). Further information is available at: https://methods.schattauer.de/en/authors/open-access.html.

Authors of Open Access articles have the right to use the publisher’s version of the manuscript and publish it on their own personal website or an institutional website, as well as upload it to a repository.

Journal Contact Information

Please use ed@MethodsInfMed.org as e-mail address for all correspondence with the editors and with the editorial office. The editorial office is located at Karolinska Institutet, LIME, Health Informatics Centre, Tomtebodavägen 18a, 171 77 Stockholm, Sweden, www.ki.se/hic; editorial assistant is Stefano Bonacina.
