

## Instructions for Authors

### Editors-in-Chief

Professor Dr. med. Thomas Gudermann

(Endocrinology)

Professor Dr. med. Peter Nawroth (Diabetology)

### Editorial Office

Jutta Schreier

Ludwig-Maximilians-Universität München

Walther-Straub-Institut für Pharmakologie und Toxikologie

Goethestr. 33

DE-80336 München

Tel.: +49 89 2180 75700

Fax: +49 89 2180 75701

E-mail: [jutta.schreier@thieme.de](mailto:jutta.schreier@thieme.de)

### Scope

*Experimental and Clinical Endocrinology & Diabetes* accepts manuscripts in English in the fields of endocrinology and diabetology from clinical and laboratory research. Special attention is given to obesity, bone metabolism and dyslipidemia. The journal publishes original papers, short communications, reviews, mini-reviews and commentaries. Abstracts from national and international meetings submitted by the organizers will also be considered for publication upon request.

Manuscripts are received with the explicit understanding that they have not been published elsewhere and are not under simultaneous consideration by any other publication.

### Manuscript Submission

All manuscripts must be submitted exclusively via online submission at <http://mc.manuscriptcentral.com/eced>

Submissions of hardcopy manuscripts will not be accepted. Please refrain from sending manuscripts via e-mail. For submission of all manuscripts, please follow the instructions on the online submission system. Before submission, keep ready full metadata of all manuscripts (title, short running title, authors' names including affiliations and addresses, list of keywords and abstract). The author submitting the manuscript will be corresponding author. Figures should be uploaded separately as \*.tif, \*.jpg, \*.ppt, \*.doc or \*.xls files (resolution: colored and black-white bitmaps: 300 dpi; diagrams and line drawings: 600 dpi minimum). Tables should be uploaded in a separate Word file (not as a \*.jpg file). The legends to the figure and table including Arabic numerals should be entered in the appropriate fields during the file upload. Please note that figures and tables should not be integrated into the main document, but a list with the legends of the figures and tables should be included here. Authors are responsible for the correctness of the manuscripts and the list of references.

### A. Original Articles

Original papers should deal with investigations and results of high scientific value which have not been published previously.

Authors are asked to follow the outline set below: Page 1: a) title, b) short running title (limit: 40 characters), c) name of the author (no titles or academic grades) and address of the institute(s) where the in-

vestigations have been carried out. Should the address of the author at the time of publication differ from the one stated in the paper, the current address should be stated in a footnote, d) complete mailing address of corresponding author including telephone and telefax numbers and e-mail addresses. Page 2: a) an abstract containing not more than 250 words with no abbreviations, b) keywords (3–6 without repeating words in the title). Page 3 and onwards: a) introduction also indicating the aim of the study, b) materials and methods, c) results: double presentation of data in the form of text, tables or figures should be avoided, d) discussion and conclusions, e) list of references, f) legends of tables and figures.

3. References a) *Text*: Citations and references should be numbered consecutively using square brackets in the order in which they are mentioned in the text, followed by any tables or legends. Please do not alphabetize references and bibliographics. Do not use footnotes and hyperlinks. If authors are mentioned in the text, only the first author should be given followed by "et al." whenever the reference has three or more authors. Example: "...protein concentrations were determined according to Lowry et al. [12]. b) List of References: References should be given as plain text. Do not use fields in MS Word, as these are difficult to process later. The references should be listed in numbered order according to the sequence they appear in the text. All authors or groups of authors of each publication should be mentioned. The name of the author(s) should be followed by the full title of the paper, name of the journal in which it has been published (abbreviations according to Index Medicus viz. PubMed/Medline), year of publication, volume, first and last page. Abstracts and supplements have to be clearly marked. Chapters from books have to be cited as follows: author(s), title of chapter, title of book, editor(s), place of publication, publisher, year of publication, first and last page of the chapter. Examples:

9 Lowry OH, Rosebrough NJ, Farr AL, Randall RJ. Protein measurement with the Folin-phenol reagent. *J Biol Chem* 1951; 193: 265–275

10 Kerner W, Pfeiffer EF. The artificial pancreas. In: Sarnols E (ed). *The endocrine pancreas*. New York: Raven Press, 1991: 441–456

### B. Reviews, Mini-Reviews and Meta-Analyses

Reviews are normally published by invitation only. Reviews deal with previous research on a certain topic and serve to summarize the current state of the art. Their structure varies from an original paper according to the nature of the review. Reviews covering basic research should take a causal and mechanistic approach, whereas reviews dealing with clinical topics should focus on therapeutic relevance. They should not exceed 20 type-written pages and 100 references. All reviews will be peer reviewed. **Please refrain from submitting uninvited reviews.** If you plan to submit a review, please contact the editors first, explaining in your letter to the editor why this review is unique and suited to advance the field.

Mini-Reviews summarize the main findings only and give a brief outline. They should not exceed 8 type-written pages.

Meta-Analyses will only be considered if they make a substantial contribution to the field.

### C. Methods and Techniques

This section focusses on papers covering novel methods and/or substantial improvements on established, proven techniques in endocrinology and diabetes research. The aim is to provide researchers with new, innovative tools that will help them better conduct their research, hence practical relevance is of utmost importance to papers published in this section. Original articles covering recent technical and/or methodological developments or innovations are accepted. Methods must be accurately described and validated and there should ideally be an application to a specific question that the new technique addresses better than other, older methods. Methods must be described in detail so that other researchers can use this method for their own research.

For formal requirements please refer to the instructions for original articles above.

### D. Commentaries

Commentaries are usually invited. They aim at commenting on subjects with a strong impact upon experimental endocrinology and diabetology or they refer to a published article directly.

### E. Letters to the Editor

This section has been introduced in order to encourage the authors in a free exchange of ideas. The opinions presented will not necessarily reflect the opinions of the Editors.

### Supporting Information

To keep articles as concise and at the same time as informative as possible, authors are encouraged to submit part of their tables and figures as Supporting Information (SI). The following type of data will be published as SI: high-resolution halftone and color illustrations, and tables summarizing data that are not essential but useful to the understanding of an article. Tables and figures provided as SI must be referred to in the manuscript as follows: Table 1S and Figure 1S. SI has to be submitted as a separate file.

SI is published on the journal's homepage at: <http://www.thieme-connect.de/ejournals/toc/eced>.

### Clinical Trials

*Experimental and Clinical Endocrinology & Diabetes* supports trial registration. All trials reported must be registered at an official trial registry recognised by the International Committee of Medical Journal Editors, such as ClinicalTrials.gov ([www.clinicaltrials.gov](http://www.clinicaltrials.gov)) or any of the primary registries on the World Health Organization's International Clinical Trial Registry Platform ([www.who.int/ictpr](http://www.who.int/ictpr)).

### Conflict of Interest

A statement concerning the conflicts of interest of all authors is mandatory.

### Copyright

The publishers hold the copyright on all material appearing in *Experimental and Clinical Endocrinology & Diabetes*. A Copyright Transfer Agreement will be sent to the corresponding author together with the galley proofs. The agreement must be completed and returned to the publishers before the article can be published. **Important:** If you intend to use material

taken from foreign sources (including figures, tables, etc.), please contact the publisher directly to arrange the next steps (eced@thieme.de).

#### **English Language**

It is in the authors' best interest that manuscripts be proofread by a native English speaker.

#### **Proofs and Reprints as PDF File**

Galley proofs will be sent to the corresponding author as a PDF file. The corresponding author receives a PDF file of the published article free of charge.

#### **Reproduction of Colour Figures**

Figures are automatically reproduced in black and white in print and online. Should you want your figures in colour, you will be charged € 440 for the first colour figure and € 80 for any further figure (including 19% VAT).

#### **Research Ethics**

For all research involving humans, subjects must have given their informed consent. Research on animals must have been approved by the local ethics committee.
