Glass ionomer cement 65–66
Gold 55–56
Graft material properties 29–32
Granuloma, following stapedectomy 119
Gusher ear, stapedectomy and 130

Glass ceramics 62–64

patophysiologic aspects 142–143
piezoelectric transducers 145
sensorineural hearing loss 143, 146, 152–157
clinically approved amplifier implants (AlS) 155–157
fully implantable devices 154–155
partial systems 152–154
similarities to conventional hearing aids 143
surgical aspects 146–147
ossicular chain preservation 147
sensor 147
transducer 146
technological aspects 148–149
energy aspects 148
full implantability 148–149
modular principle 149
transducer principles 148

Incus 35
dislocation 37
see also Osseous chain
Internal carotid artery, eustachian tube relationship 7, 9, 11–12
Invasive cholesteatoma 76
Isthmus, eustachian tube 7

Klinefelter's syndrome 99

Labyrinthine fistula 89
Lamina propria 26–27

Laser techniques
stapes surgery 103–105, 110–114
clinical experience 104–105
properties of different lasers 103–104
temperature damage 104
transcanal argon laser stapedotomy 110–114
with preservation of the stapedius tendon 113–114
vibration measurement 24
Levator veli palatini 9–10, 16

Macor 63–64

Magnetic resonance imaging (MRI)
cholesteatoma 79
eustachian tube 14–15
otosclerosis 101

Malignant otosclerosis 98

Malleus 35
tympanic membrane relationship 27–29
vibration 27–28
see also Osseous chain
Malleus handle (malleus grip) stapedotomy 124–128
results 127–128

Mandibular nerve, eustachian tube relationship 12–13

Marfan's disease 99
Mastoid cavity, drainage 88–89
see also Open mastoid cavity
Maxillary artery, eustachian tube relationship 12

Measles virus 98
Ménère’s disease, with otosclerosis 115–116
Meningeal artery, middle, eustachian tube relationship 12
Meningitis, otogenic 90
malformations 99
replacement prostheses 107–109
commercially available piston prostheses 107–108
intraoperatively prepared prostheses 107
piston diameter influence on hearing gain 108–109
structure and weight influence on hearing gain 108
see also Ossicular chain; Stapes surgery
Stapes surgery 132–133
laser use 103–105, 110–114
properties of different lasers 103–104
temperature damage 104
microsurgical equipment 101–103
microdrills 102–103
operating microscope 105
outlook 132–133
perioperative medication 114
validity of evaluation methods 131–132
audiometry limits 131
evaluation proposals 132
paradox of the high surgical success rate 132
see also Stapedectomy; Stapedotomy; Stapesplasty 42–44
see also Stapes surgery
Staphylococcus aureus 78
Steel 54–55
Success rate calculation 132
Suspensory ligaments, eustachian tube 5–6

T
Tantalum 55
Teflon (polytetrafluoroethylene) 60–61, 68
with carbon (Proplast) 61
Temporomandibular joint, eustachian tube relationship 13
Tensor tympani 116
Tensor veli palatini 2, 10–11, 16
dysfunction 16
imaging 14–15
Tinnitus
in otosclerosis 100
tensor veli palatini role 11
Titanium 56–58
Totally Implantable Communication Assistant (TICA) 151–152, 154–155, 158
Totally Implantable Middle Ear Implant (T-MEI) 151
Transcanal argon laser stapedotomy 110–114
with preservation of the stapedius tendon 113–114
Transducers 148
dielectric 148
electrodynamic 148
electromagnetic 145, 148
implantable 149
magnetostrictive 148
nonacoustic 144
piezoelectric 145, 148
surgical aspects 146
see also Implantable hearing devices
Tricalcium phosphate (TCP) ceramic 64
Tubal cartilage 4–5
Tympanic membrane 26, 67–68, 142
acoustic mechanical properties 26–29
perforations 29
healed 29
reconstruction 27
see also Tympanoplasty
sound conduction 27–28, 37
Tympanoplasty 27, 29–35, 36, 61
eustachian tube function and 18
graft materials 29–32
cartilage 30–32, 85–87
fascia 30–32, 85–86
perichondrium 30–32, 86
in cholesteatoma surgery 84–85
reconstructed tympanic membrane 29–35
reconstruction technique effect on sound transmission 32–35
type IV tympanoplasty 36
Tympanotomy, posterior 82

U
Ultrasound technique, stapedectomy 102–103

V
Valsalva maneuver 18
Ventilation tubes 56, 58, 66
Vertigo
in otosclerosis 100
stapedectomy complications 119, 122
Vibrant Soundbridge 156–157
Vinyl acrylate 58
