# Hughes/Pensak, *Clinical Otology, 3rd Edition*

## TABLE OF CONTENTS

### Section One: Basic Science
1. Anatomy and embryology of the ear  
   Gulya
2. Principles of audiology and auditory physiology  
   Brown/Keith
3. Vestibular physiology  
   Goebel/Sumer
4. Molecular biology methodology  
   Ryan/Hernandez/Wasserman
5. Clinical molecular disorders  
   Friedman/Lim/Doherty
6. Pharmokinetics  
   Rybak

### Section Two: Evaluation
7. Temporal bone imaging  
   Cornelius
8. Diagnostic audiology  
   Newman/Sandridge
9. Central auditory assessment  
   Keith
10. Laboratory tests of vestibular and balance function  
    White
11. Evaluation of the cranial nerves  
    Welling/Jacob
12. Otologic photography and videography  
    Yanagisawa/Yanagisawa
13. Clinical evaluation of hearing loss  
    Terk/Kveton
14. Clinical evaluation of the dizzy patient  
    White

### Section Three: Management
15. Disorders of the Auricle  
    Liess/Kinney
16. Diseases of the external auditory canal  
    Zender/Marzo/Leonetti
17. Otitis media with effusion  
    Sautter/Hirose
18. Surgery for chronic ear disease  
    Weber
19. Complications of otitis media and intraoperative complications  
    Lin/Selesnick/Prasad
20. Otosclerosis  
    McKenna/de Venecia
21. Temporal bone trauma  
    Huang/Lambert
22. Hereditary hearing loss  
    Choo/Greinwald
23. Nonhereditary hearing loss

Monsell, Teixido, Slattery, Wilson, Kung, and Hughes

24. Benign tumors of the temporal bone
25. Cystic lesions of the petrous apex
26. Malignant tumors of the temporal bone
27. Vestibular disorders
28. Facial nerve disorders
29. Immunologic disorders of the inner ear

Section Four: Rehabilitation

30. Aural rehabilitation
31. Implantable hearing devices
32. Vestibular rehabilitation
33. Facial reanimation
34. Otalgia
35. Pulsatile tinnitus
36. Tinnitus and decreased sound tolerance
