Mathias Baehr, MD is a full Professor and Chairman of the Department of Neurology, University Medical Center Götingen, Götingen, Germany.

Michael Frotscher, MD was Hertie Senior Research Professor for Neuroscience and Chairman Department of Structural Neurobiology, Center for Molecular Neurobiology, Hamburg (ZMNH), University of Hamburg, Hamburg, Germany.

**DESCRIPTION**  
*The perennial neurology classic, updated and expanded*

The sixth edition of *Duus' classic Topical Diagnosis in Neurology* builds on the clear, integrated presentation of anatomy, function, and disorders of the central nervous system that made it a success for almost over five decades, serving as a quick reference for practitioners and trainees alike. It elucidates the neuroanatomical pathways that lead to specific clinical syndromes, and demonstrates how comprehensive anatomical knowledge combined with a thorough neurological examination can help localize and categorize a lesion and arrive at a differential diagnosis.

The time-tested logical, thematic structure with useful summaries, at the beginning of each chapter, and color-coded section headings enable readers to distinguish neuroanatomical from clinical material at a glance and enable efficient and time saving study.

**Features of the sixth edition:**

- New tables and clinical case examples
- Improved descriptions of neuroanatomical/neurophysiological basics in the context of clinical symptoms
- Twenty-three new illustrations, to a total of more than 400 illustrations
- A wide range of study aids and clinical correlations that support the emphasis on integrative medicine in the current medical school curricula

Topical Diagnosis in Neurology is an ideal reference for neurologists and neuroscientists who correlate neurological diseases with anatomical location to arrive at a diagnosis or understand a clinical syndrome. It is also an essential tool for trainees and advanced students who need a solid grounding in key neurofunctional relationships.

**COMPETITION**  
 CONTENTS
 1 Elements of the Nervous System
 2 Somatosensory System
 3 Motor System
 4 Brainstem
 5 Cerebellum
 6 Diencephalon and Autonomic Nervous System
 7 Limbic System
 8 Basal Ganglia
 9 Cerebrum
 10 Coverings of the Brain and Spinal Cord; Cerebrospinal Fluid and Ventricular System
 11 Blood Supply and Vascular Disorders of the Central Nervous System
