Controversies in Neuroendoscopy

Editors
Peter Nakaji, MD, is a Professor of Neurosurgery, Director of Minimally Invasive and Endoscopic Neurosurgery, and Program Director of the Neurosurgery Residency Program, Barrow Neurological Institute, Department of Neurosurgery, Phoenix, Arizona, USA.
Hasan A. Zaidi, MD, is an Assistant Professor of Neurosurgery, Department of Neurosurgery, Harvard Medical School/Brigham and Women's Hospital, Boston, Massachusetts, USA.

Description
A unique perspective on neuroendoscopic versus microsurgical techniques from world-renowned neurosurgeons

In the last two decades, neuroendoscopy has evolved from a fringe neurosurgical tool to an established subspecialty focusing on the treatment of diverse cranial and spinal diseases. Today, neuroendoscopic technology is widely used to treat supratentorial diseases, skull base pathologies, craniocervical diseases, and spinal pathologies. Despite the expanded use of neuroendoscopy across several subspecialties, its benefits and disadvantages versus those of traditional microsurgical methods remain highly controversial. Contradictory evidence in the neurosurgical literature adds to the surgical decision-making challenges for veteran and novice practitioners alike.

Controversies in Neuroendoscopy by Peter Nakaji and Hasan Zaidi fills an unmet need for a book encompassing best practices, patient selection, and limitations and advantages of neuroendoscopic surgical approaches. Each case presents firsthand knowledge of internationally esteemed neurosurgeons, with a moderator, an endoscopic expert, and an expert in traditional microsurgical approaches. The unique discussion of neuroendoscopy versus microsurgery enables readers to compare the benefits and pitfalls of endoscopic and open microsurgical procedures for a wide range of conditions.

- In-depth comparative guidance on applications of the flexible endoscope, rigid endoscope, 3D endoscope, and high-definition 2D endoscope versus the microscope
- A full spectrum of neurological conditions across the age continuum with comparative approaches for skull base surgery, pituitary surgery, hydrocephalus, spinal surgery, peripheral nerve surgery, and arachnoid cyst fenestration
- Radiological imaging and intraoperative photographs enhance cases and provide precise, insightful technical guidance
- High-quality color illustrations from the skilled medical illustrators at Barrow Neurological Institute reinforce key points and surgical techniques

Neurosurgery residents, neurosurgeons, and spine surgeons will all benefit from reading this remarkable book cover to cover, and they will no doubt use it as a go-to resource for specific cases.
CONTENTS

Section A: Skull Base
I. Pituitary-Tumor Surgery
II. Anterior Skull-Base Tumors
III. Craniocervical Junction

Section B: Paraventricular Lesions
IV. Management of Colloid Cysts

Section C: Neurovascular
V. Decompression of Cranial Nerves
VI. Clipping of Cerebral Aneurysms
VII. Evacuation of Intraparenchymal Hemorrhage
VIII. Approaches to Brainstem Cavernous Malformations

Section D: Tumors
IX. Intraparenchymal Brain Tumors

Section E: Pediatrics
X. Craniosynostosis Surgery

Section F: Spine and Peripheral Nerves
XI. Cervical Discectomy/Foraminotomy
XII. Thoracic Discectomy
XIII. Endoscopic Versus Open Carpal Tunnel Release

Section G: Technology
