Editors: Philip H. Zeplin, Schlosspark Klinik Ludwigsburg Fachklinik für Plast. Chirurgie Ludwigsberg, Germany

Description: Describing the possibilities and limitations of modern reconstructive and aesthetic surgery of the male and female genitalia, this unique work promotes individualized treatment and detailed knowledge of anatomy. This book links the fields of plastic surgery, gynecology, urology, and dermatology to guide surgeons becoming acquainted with the complexities and controversies of surgery in this highly sensitive body area.

Sales Hooks:
- Extensive illustrations accompany the concise text on specialized surgical techniques
- Background information facilitates understanding of the anatomic and physiologic relationships
- Integrated discussion of complications allows realistic assessment of risks while suggesting appropriate therapy for complications
- Numerous case studies illustrate the subject's many facets
