2020 Quarter 1 Advanced Book Information

Featured Titles
- Feb-20 Internal Organs (THIEME Atlas of Anatomy), 3rd Edition

Neurosurgery Titles
- Feb-20 Brain Mapping: Indications and Techniques, 1st Edition

Plastic and Reconstructive Surgery Titles

Radiology Titles
- Jan-20 Diagnostic Imaging of the Chest, 1st Edition
- Jan-20 Radiologic Physics Taught Through Cases, 1st Edition
- Jan-20 Ultrasound Q&A Review for the Boards, 1st Edition

Orthopaedic Titles
- Dec-19 Learning From Failures in Orthopedic Trauma: Key Points for Success, 1st Edition

Ear, Nose, and Throat Titles
- Jan-20 Cost-Effective Evaluation and Management of Cranial Neuropathy, 1st Edition
- Feb-20 Functional and Selective Neck Dissection, 2nd Edition

Ophthalmology Titles
- Feb-20 Eyelid Reconstruction, 1st Edition

Communication Sciences Titles
- Mar-20 Speech-Language Pathology Casebook, 1st Edition

Student Titles
- Mar-20 Histology – An Essential Textbook, 1st Edition

Other Titles
- Dec-19 Science of Synthesis: Dual Catalysis in Organic Synthesis 1, 1st Edition
- Dec-19 Science of Synthesis: Dual Catalysis in Organic Synthesis 2, 1st Edition
- Dec-19 Science of Synthesis: Knowledge Updates 2019/3, 1st Edition
- Feb-19 Neurological Diseases: Implications in Medical and Dental Practices, 1st Edition
- Feb-19 Case Guides to Complete and Partial Denture Prosthodontics, 1st Edition
- Mar-20 Advanced Craniomaxillofacial Surgery: Tumor, Corrective Bone Surgery, and Trauma, 1st Edition

Additional Information
Out of Print Oct-Dec 2019
Representatives & Exclusive Distributors
A practical, hands-on manual for surgeons of all levels on the management of foot and ankle trauma.

The approaches are presented in a systematic, case-based format, ranging from simple to more complex cases. It provides step-by-step coverage of a wide range of basic to advanced techniques and procedures for the management of fractures, dislocations, and soft tissue injuries of the foot and ankle. While a single case can be approached in a variety of ways, this book seeks to provide important guidelines which apply to most situations that may arise in foot and ankle injuries. It will be of value to anyone providing care for foot and ankle injuries.

This book focuses on:

- General considerations in foot and ankle surgery
- Clinical and radiographic evaluation
- Decision-making and options for nonoperative treatment
- Preoperative planning
- Surgical approaches
- Avoiding pitfalls
- Managing risks and complications
- Alternative techniques
- Postoperative rehabilitation

Key features include:

- Contributions from 48 surgeons from 14 countries
- 59 detailed cases covering a comprehensive range of foot and ankle injuries
- More than 1,650 high-quality illustrations and images

There is no direct competition addressing fracture management specifically.
CONTENTS

Introduction
1 General considerations in foot and ankle surgery

Distal tibia
2 Distal tibia/pilon fractures
   Section 1 Metaphyseal fractures with joint involvement
   Section 2 Complex articular fractures
   Section 3 Complex articular fractures with compromised soft tissues

Malleoli
3 Malleolar fractures
   Section 1 Malleolar fractures with a stable syndesmosis
   Section 2 Malleolar fractures with syndesmotic disruption
   Section 3 Malleolar fractures with partial joint impaction

Calcaneus
4 Calcaneal fractures
   Section 1 Peripheral fractures
   Section 2 Central fractures

Talus
5 Talar fractures and dislocations
   Section 1 Peripheral fractures
   Section 2 Central fractures
   Section 3 Dislocations

Midfoot
6 Midfoot injuries
   Section 1 Chopart joint injuries
   Section 2 Tarsometatarsal/intertarsal joint injuries (Lisfranc)

Metatarsals
7 Metatarsal fractures
   Section 1 First metatarsal fracture
   Section 2 Second to fourth metatarsal fractures
   Section 3 Fifth metatarsal base fracture

Phalanges and sesamoid
8 Phalangeal and sesamoid fractures and dislocations
   Section 1 Great toe fracture
   Section 2 Lesser toe fracture and dislocation
   Section 3 Sesamoid fracture

Appendix
**Editors**

Leonardo Rangel-Castilla, MD, is Assistant Professor, Department of Neurosurgery and Radiology, Mayo Clinic, Rochester, Minnesota, USA.

Adnan H. Siddiqui, MD, PhD, FACS, FAHA, FAANS, is Professor and Vice Chair; and Director, Neuroendovascular Fellowship Program, Department of Neurosurgery and Radiology, State University of New York, Buffalo, New York, USA.

Elad I. Levy, MD, MBA, FACS, FAHA, is Professor and Chair, Department of Neurosurgery and Radiology, State University of New York; and Director of Interventional Stroke Services, Kaleida Health Network, Buffalo, New York, USA.

**Description**

The go-to guide on safely performing state-of-the-art neuroendovascular procedures from top experts!

Unlike traditional textbooks that detail natural history, physiology, and morphology, *Video Atlas of Neuroendovascular Procedures* presents basic and complex neuroendovascular procedures and cases with concise text and videos. Renowned neuroendovascular surgeons Leonardo Rangel-Castilla, Adnan Siddiqui, Elad Levy, and an impressive group of contributors have compiled the quintessential neuroendovascular resource. Organized into eight major subtopic sections, this superb video atlas covers a full spectrum of endovascular approaches to diagnose and treat intra- and extracranial neurovascular disease.

The book starts with a section on vascular access and concludes with endovascular complications and management. Forty chapters includes succinct summaries, scientific procedural evidence, the rationale for endovascular intervention, anatomy, required medications, device selection, avoiding complications, and managing potential problems that can arise during procedures. The image-rich clinical cases feature insightful firsthand knowledge and pearls.

**Key Features**

- More than 1,000 relevant, high quality neuroimaging findings and artist illustrations enhance understanding of impacted anatomy and approaches
- Specific techniques and key steps are brought to life through more than 140 outstanding videos narrated by highly experienced endovascular neurosurgeons — conveniently accessible via smart phones or tablets using QR technology
- Essential diagnostic procedures such as cerebral and spinal angiography, cerebral venogram, and balloon test occlusion
- Complex neuroendovascular procedures including various angioplasty and stenting approaches for extracranial vessel disease, carotid and vertebral arteries, and venous sinus; thrombectomy procedures to treat acute ischemic stroke; and coiling, flow diversion, and embolization
techniques for intracranial aneurysms, brain/spinal AVMs and fistulas, and select CNS and extracranial tumors

The content-rich reference is a must-have for all resident and veteran neurosurgeons, interventional radiologists, and neurologists. Learn to safely perform a wide array of cutting-edge neuroendovascular procedures — from access to closure — and achieve improved outcomes for your patients.

COMPETITION

The videos included with this title set it apart from related titles on the market.

Companion Thieme titles:

CONTENTS

Section 1 Vascular Access
Chapter 1 Femoral artery access and closure
Chapter 2 Femoral vein access
Chapter 3 Brachial artery access
Chapter 4 Radial artery access
Chapter 5 Direct carotid artery access

Section 2 Diagnostic Procedures
Chapter 6 Diagnostic cerebral angiography
Chapter 7 Diagnostic spinal angiography
Chapter 8 Diagnostic cerebral venogram
Chapter 9 Balloon test occlusion
Chapter 10 Petrosal sinus sampling

Section 3 Extracranial Vessel Angioplasty/Stenting
Chapter 11 Carotid artery stenting with distal protection
Chapter 12 Carotid artery stenting with proximal protection
Chapter 13 Carotid artery stenting under flow reversal
Chapter 14 In-stent stenosis angioplasty
Chapter 15 Vertebral artery stenting
Chapter 16 Venous sinus stenting

Section 4 Acute Stroke Procedures
Chapter 17 Anterior circulation mechanical thrombectomy
Chapter 18 Anterior circulation mechanical thrombectomy with stent retriever
Chapter 19 Posterior circulation mechanical thrombectomy
Chapter 20 Mechanical thrombectomy with intracranial stenting/angioplasty
Chapter 21 Mechanical thrombectomy with extracranial stenting/angioplasty
Chapter 22 Intracranial atherosclerosis disease – angioplasty

Section 5 Intracranial Aneurysms
Chapter 23 Primary aneurysm coiling
Chapter 24 Balloon-assisted aneurysm coiling
Chapter 25 Stent-assisted aneurysm coiling
Chapter 26 Flow diverters
Chapter 27 Intrasaccular flow disrupter
Chapter 28 Aneurysm neck reconstruction and coiling
Chapter 29 Liquid embolic agents for intracranial aneurysms
Chapter 30 Intraarterial vasospasm treatment

Section 6 Brain Arteriovenous Malformations and Fistulas
Chapter 31 Arteriovenous malformation embolization with Onyx
Chapter 32 Arteriovenous malformation embolization with NBCA
Chapter 33 Dural arteriovenous fistula embolization
Chapter 34 Spinal arteriovenous fistula embolization
Chapter 35 Carotid-cavernous fistula embolization

Section 7 Head and Neck Embolization
Chapter 36 Epistaxis
Chapter 37 CNS tumors embolization
Chapter 38 Extracranial and neck tumors embolization
Chapter 39 Carotid blowout syndrome

Section 8 Endovascular Complications and Management
Chapter 40 Endovascular complications and management

SPECIALTY
Plastic Surgery, General Surgery, Breast Surgery

LEVEL
Plastic surgeons and General/breast surgeons

EDITORS
Glyn E. Jones, MD, FRCS (Ed), FCS(SA), FACS, Professor of Plastic Surgery, University of Illinois College of Medicine, Peoria, Illinois.

DESCRIPTION
Few surgical texts are able to provide readers with a level of descriptive and visual detail sufficient to be considered a primary manual for surgical procedures. Surgeons typically face the daunting task of extensive research through various texts to piece together a picture comprehensive enough to guide them through a new procedure. This prospect is especially formidable in the field of plastic and reconstructive breast surgery, in which techniques are constantly evolving and older texts describe procedures that have long since been supplanted by superior methods and innovative approaches.

This fourth edition of Bostwick's Plastic and Reconstructive Breast Surgery, edited by premier breast surgeon Glyn E. Jones, provides just that manual for breast and plastic surgeons. This comprehensive text encompasses every key ingredient for a step-by-step surgical guide to breast surgery:

- An expanded microsurgical section incorporating the most widely used flaps and recent advances
- Extensive coverage of revolutionary prepectoral breast reconstruction, both single stage direct-to-implant approaches and 2-stage expander-implant prepectoral reconstruction
- A comprehensive approach to lymphedema surgery
- Exposure to state-of-the-art implant technology
- Contributing authors from around the globe who are heralded as the best in their field at technique and innovation
- Detailed coverage of relevant and groundbreaking new technologies that are redefining plastic surgery of the breast
- Step-by-step detailed technical operative details including technical nuances rarely outlined in surgical texts
- High-quality, updated surgical images and intricate surgical illustrations as well as pertinent radiographic examples
- An extensive collection of pertinent surgical videos, which stream directly from the publisher's website
- Technical caveats to ensure success of the surgical techniques described
- Concise but thorough chapters presented in both print and electronic formats for easy access by busy surgeons

Surgeons must be highly skilled in cosmetic breast surgery as well as in prepectoral approaches, single-stage direct-to-implant reconstruction, and microsurgery to remain competitive in the plastic and reconstructive breast surgery field. Every dedicated breast surgeon will want this essential text at their fingertips!

COMPETITION

CONTENTS

Volume I

Part I: Basic Principles
Chapter 1: Anatomy, Physiology, and Aesthetics
Chapter 2: Breast Aesthetics
Chapter 3: Oncological Aspects of Nipple-Sparing Mastectomy
Chapter 4: Oncological Aspects of Breast Reconstruction
Chapter 5: Gene Mutations and Breast Cancer Risk: Overview and Management
Chapter 6: Multimodality Imaging in the Interdisciplinary Management of Breast Diseases
Chapter 7: Technological Advances in Breast Surgery
  i. Acellular Dermal Matrices
  ii. Biological Matrix Applications in Breast Reconstruction
Chapter 8: Fat Grafting in Breast Surgery: The Data
Chapter 9: Fat Grafting to the Breast: Aesthetic and Reconstructive Applications
Chapter 10: Fat Grafting to the Breast in Prepectoral Breast Reconstruction: A Current Overview

Part II: Augmentation Mammaplasty
Chapter 11: Preoperative Evaluation of the Breast Augmentation Patient
Chapter 12: Implant Technology
Chapter 13: Breast Implant-Associated Anaplastic Large Cell Lymphoma
Chapter 14: Augmentation Mammaplasty with Cohesive Gel Implants
Chapter 15: Subpectoral Breast Augmentation (Inframammary Approach)
Chapter 16: Subfascial Inframammary Breast Augmentation
Chapter 17: Transaxillary Approach to Endoscopic Breast Augmentation
Chapter 18: Periareolar Breast Augmentation
Chapter 19: Managing Asymmetry and Congenital Anomalies
Chapter 20: Managing Complications in Breast Augmentation

Part III: Mastopexy
Chapter 21: Decision Making in Mastopexy
Chapter 22: Periareolar Mastopexy
Chapter 23: Vertical Mastopexy
Chapter 24: The Wise Pattern Mastopexy

Part IV: Mastopexy Augmentation
Chapter 25: Decision Making in Mastopexy Augmentation
Chapter 26: Periareolar Mastopexy Augmentation
Chapter 27: Vertical Mastopexy Augmentation
Chapter 28: The Wise Pattern Mastopexy Augmentation
Chapter 29: Prevention and Management of Complications in Mastopexy Augmentation

Part V: Massive Weight Loss
Chapter 30: Breast Surgery after Massive Weight Loss

Part VI: Reduction Mammaplasty
Chapter 31: Vertical Superior Pedicle Breast Reduction (Modified Lassus Technique)
Chapter 32: Superomedial Vertical Breast Reduction
Chapter 33: Superomedial Pedicle Technique with Inverted-T Closure (Wise Pattern)
Chapter 34: Central Mound Inferior Pedicle Technique
Chapter 35: Free Nipple Graft Technique
Chapter 36: Outcomes and Reducing Complications in Breast Reduction
Chapter 37: Gynaecomastia: Evaluation and Treatment

Volume II

Part VII: Non-Microsurgical Breast Reconstruction
Chapter 38: Decision Making in Breast Reconstruction

Subpart A: Implant-Based Reconstruction
Chapter 39: Prepectoral Breast Reconstruction: Direct-to-Implant versus Two-stage
Chapter 40: Two-Stage Subpectoral Tissue Expander-Implant Reconstruction
Chapter 41: Subpectoral Direct-to-Implant Single-Stage Reconstruction
Chapter 42: Prepectoral Direct-to-Implant Breast Reconstruction
Chapter 43: Prepectoral Site Conversion for Animation Deformity
Chapter 44: Two-Stage Prepectoral Prosthetic Breast Reconstruction
Chapter 45: Preventing and Managing Complications of Expander-Implant Reconstruction
Chapter 46: Implant-Based Reconstruction and Radiation

**Subpart B: Latissimus Dorsi Flap Reconstruction**
Chapter 47: Latissimus Dorsi Flap Anatomy
Chapter 48: Latissimus Dorsi Flap Reconstruction
Chapter 49: Preventing and Managing Complications in Latissimus Dorsi Flap Reconstruction

**Subpart C: Pedicled TRAM Flap Reconstruction**
Chapter 50: Anatomy of the TRAM Flap and Abdominal Donor Site
Chapter 51: Transverse Rectus Abdominis Musculocutaneous Flaps

**Part VIII: Microsurgical Breast Reconstruction**

**Subpart A: DIEP Flap**
Chapter 52: Preoperative Planning and Imaging of the DIEP Flap
Chapter 53: DIEP Flap Reconstruction and Technique
Chapter 54: Prevention and Management of Complications in DIEP Flap Reconstruction

**Subpart B: Muscle-Sparing Free TRAM Flap**
Chapter 55: Muscle-Sparing Free TRAM Flap Reconstruction

**Subpart C: Superficial Inferior Epigastric Flap**
Chapter 56: Superficial Inferior Epigastric Artery Perforator Flap

**Subpart D: Thigh-based Free Flaps**
Chapter 57: Transverse Upper Gracilis Flap
Chapter 58: Profunda Artery Perforator Flap

**Subpart E: Alternate Perforator Flap Donor Sites**
Chapter 59: Gluteal Artery Perforator Free Flap
Chapter 60: Lumbar Artery Perforator Flap

**Part IX: Miscellaneous**

**Subpart A: Oncoplastic Breast Conservation Surgery**
Chapter 61: Principles of Oncoplastic Breast Surgery and Patient Selection
Chapter 62: Oncoplastic Reconstruction by Tumor Location and Outcomes
Chapter 63: Managing Complications after Breast Radiation Therapy

**Subpart B: Nipple-Areolar Reconstruction**
Chapter 64: Nipple-Areolar Reconstruction

**Subpart C: Lymphedema**
Chapter 65: Surgical Treatment of Lymphedema

**Subpart D: Complex Case Salvage**
Chapter 66: Salvage of Complex Problems
Toronto Notes for Medical Students is proud to present the 36th Edition of the highly successful Essential Med Notes textbook series. The 2020 edition features content updates across the main text, figures, graphics, and evidence-based medicine sections that are consistent with the most recent medical licensing exam objectives. Many landmark trials have been included to reflect the most current evidence across all medical specialties. The new division of Essential Med Notes into three textbooks – medicine, surgery, and primary medicine enhances readability and eases the load of studying for the Canadian and American medical licensing exams. We have also redesigned our website to more closely reflect the layout of the textbook and to enrich the learning experience.

As a not-for-profit organization, all our proceeds from book sales have been donated to support medical student activities, charity events, and community outreach programs over the past years.

**Essential Med Notes 2020 Key Features:**

- Updated content reflective of the newest USMLE® Step 2 objectives
- A concise textbook with in-depth coverage of 31 medical specialties divided into three books – medicine, surgery, and primary medicine.
- A convenient e-book available for purchase
- Up-to-date DSM-5 criteria and Evidence-Based Medicine highlights
- Our redesigned website features online resources, including a Color Atlas, ECGs Made Simple tutorial, Heart Sounds tutorial, Essentials of Medical Imaging, over 50 Practice OSCE stations, and much more!
- The Clinical Handbook highlights common clinical management scenarios and helpful tips on clerkship basics - the perfect size to carry on the wards, which has also been updated to be reflective of the latest evidence-based USMLE® objectives. The Clinical Handbook also contains Stat Notes, which is the ultimate guide to managing on-call issues, featuring a step-by-step approach for 30 common ward scenarios.

 Remarkable atlas provides exceptionally detailed, clinically relevant anatomic knowledge!

Praise for the prior edition: "This book is an ideal text not only for students of various disciplines studying anatomy for the first time, but it also serves as a valuable resource for faculty and providers."—Yale Journal of Biology and Medicine

Thieme Atlas of Anatomy: General Anatomy and Musculoskeletal System, Third Edition by renowned educators Michael Schuenke, Erik Schulte, and Udo Schumacher, along with consulting editor Nathan Johnson, expands on the award-winning prior editions with updated spreads and added information on joints, muscle actions, and functional muscle groups. Organized by region, the book begins with an introduction on basic human embryology and development and an overview of the human body. Subsequent general anatomy chapters explore surface anatomy, the bones, joints, muscles, vessels, lymphatic system and glands, and general neuroanatomy. The next section delineates the trunk wall, functional musculature, and the neurovascular system, while the last two sections are dedicated to the upper limb and lower limb.

Key Features

- Nearly 2,100 images including extraordinarily realistic illustrations by Markus Voll and Karl Wesker, X-rays, MRIs, CT scans, diagrams, tables, and descriptive text provide an unparalleled wealth of information about muscle structure and bones
- Musculoskeletal, vascular, and nervous system structures are presented systematically first, then topographically, thereby supporting classroom learning and active laboratory dissection
- Emphasizes important relationships between anatomic structure and function in addition to introducing clinical applications, providing knowledge trainees can apply in practice
• Online images with “labels-on and labels-off” capability are ideal for review and self-testing

This visually stunning atlas is a must have for medical, allied health, and physical therapy students, instructors, and practicing physical and massage therapists. It is also a wonderful anatomic reference for professional artists and illustrators.

The THIEME Atlas of Anatomy series also includes two additional volumes, Internal Organs and Head, Neck, and Neuroanatomy.

All volumes of the THIEME Atlas of Anatomy series are available in softcover English/International Nomenclature and in hardcover with Latin nomenclature.

**EDITORS**

Michael Schuenke, MD, PhD, is Professor, Institute of Anatomy, Christian Albrecht University, Kiel, Germany.

Erik Schulte, MD, is Professor, Department of Anatomy and Cell Biology, Johannes Gutenberg University, Mainz, Germany.

Udo Schumacher, MD, FRCPath, CBiol, FIBiol, DSc, is Professor, Institute of Anatomy II: Experimental Morphology, University Medical Center, Hamburg-Eppendorf, Germany

Wayne A. Cass, PhD, is Professor and Director of Graduate Studies, Department of Neuroscience, University of Kentucky, Lexington, Kentucky, USA.

**DESCRIPTION**

Remarkable atlas provides exceptionally detailed, clinically relevant anatomic knowledge!

Praise for the prior edition: ‘The THIEME Atlas of Anatomy – Internal Organs provides pertinent and well-executed anatomical illustrations, enriched with figures from diagnostic imaging. We strongly suggest this atlas not only to students in medicine, but also to residents and practitioners, including those involved in diagnostic imaging.’ – European Journal of Nuclear Medicine and Molecular Imaging

Thieme Atlas of Anatomy: Internal Organs, Third Edition by renowned educators Michael Schuenke, Erik Schulte, and Udo Schumacher, along with consulting editor Wayne Cass, expands on prior editions with increased detail on anatomic relationships of inner organs, and the innervation and lymphatic systems of these organs. Organized by region, the book features 10 sections starting with an overview on body cavities. Subsequent sections cover the cardiovascular, blood, lymphatic, respiratory, digestive, urinary, genital, endocrine, and autonomic nervous organ systems. Regional units covering the thorax and abdomen and pelvis begin with succinct overviews, followed by more in-depth chapters detailing the structure and neurovasculature of the region and its organs.

**Key Features**

- 1,375 images including extraordinarily realistic illustrations by Markus Voll and Karl Wesker, diagrams, tables, and descriptive text provide an unparalleled wealth of information about internal organs
- 21 fact sheets provide quick, handy references summarizing salient points for each organ
- Online images with ‘labels-on and labels-off’ capability are ideal for review and self-testing

This visually stunning atlas is an essential companion for laboratory dissection and the classroom. It will benefit medical students, internal medicine residents, and practicing physicians.
The THIEME Atlas of Anatomy series also includes two additional volumes, **General Anatomy and Musculoskeletal System** and **Head, Neck, and Neuroanatomy**.

All volumes of the THIEME Atlas of Anatomy series are available in softcover English/International Nomenclature and in hardcover with Latin nomenclature.

This book includes complimentary access to a digital copy on [https://medone.thieme.com.](https://medone.thieme.com)

**Description**
Remarkable atlas provides exceptionally detailed, clinically relevant anatomic knowledge!

Praise for the prior edition: "The second edition of The THIEME Atlas of Anatomy: Volume 3 Head, Neck and Neuroanatomy is an exceptional book that combines very detailed and accurate illustrations of the region with relevant applied and clinical anatomy. As the authors mention in their preface, this book does really combine the very best of a clinically oriented text and an atlas."—Journal of Anatomy

Thieme Atlas of Anatomy: Head, Neck, and Neuroanatomy, Third Edition by renowned educators Michael Schuenke, Erik Schulte, and Udo Schumacher, along with consulting editor Cristian Stefan, expands on prior editions with hundreds of new images and significant updates to the neuroanatomy content. Head and neck sections encompass the bones, ligaments, joints, muscles, lymphatic system, organs, related neurovascular structures, and topographical and sectional anatomy. The neuroanatomy section covers the histology of nerve and glial cells and autonomic nervous system, then delineates different areas of the brain and spinal cord, followed by sectional anatomy and functional systems. The final section features a glossary and expanded CNS synopses, featuring six new topics, from neurovascular structures of the nose to the pharynx.

**Key Features**
- Nearly 1,800 images including extraordinarily realistic illustrations by Markus Voll and Karl Wesker, photographs, diagrams, tables, and succinct clinical applications make this the perfect study and teaching resource
- Expanded clinical references include illustrated summary tables and synopses of motor and sensory pathways
- Neuroanatomy additions include an in-depth overview and content focused on functional circuitry and pathways
Online images with "labels-on and labels-off" capability are ideal for review and self-testing.

This visually stunning atlas is an essential companion for medical students or residents interested in pursuing head and neck subspecialties or furthering their knowledge of neuroanatomy. It will also benefit dental and physical therapy students, as well as physicians and physical therapists seeking an image-rich clinical resource to consult in practice.

The THIEME Atlas of Anatomy series also includes two additional volumes, General Anatomy and Musculoskeletal System and Internal Organs.

All volumes of the THIEME Atlas of Anatomy series are available in softcover English/International Nomenclature and in hardcover with Latin nomenclature.

**Deependra Mahato, DO, MS**, is an Attending Neurosurgeon, Neurological Surgery Residency Program, Riverside University Health System, Moreno Valley, California, USA.

### Description

**Comprehensive resource features state-of-the-art brain mapping techniques and pearls from international recognized neurosurgeons Alfredo Quinones-Hinojosa and Kaisorn Chaichana and coeditor Deependra Mahato**

Despite advances in imaging techniques to identify eloquent cortical brain regions and subcortical white matter, brain mapping is the only method for obtaining real-time information with high sensitivity and specificity. This groundbreaking technology greatly enhances the neurosurgeon’s ability to safely resect challenging lesions located in eloquent areas of the brain. *Brain Mapping: Indications and Techniques* by esteemed neurosurgeons Alfredo Quinones-Hinojosa, Kaisorn Chaichana, and Deependra Mahato, is a comprehensive overview of the most critical aspects of brain mapping from leaders in the field.

The book starts with discussion of preoperative aspects, including the history of brain mapping and anatomy of eloquent cortical and eloquent white matter tracts. Subsequent chapters cover perioperative aspects of brain mapping including indirect and direct functional mapping, the role of neurophysiology, awake craniotomy operating room set-up and surgical instruments, and anesthetic considerations. Diverse awake and asleep brain mapping techniques are described for various intracranial pathologies, as well as advances in postoperative recovery of neurological function including physical and speech therapy.

### Key Features

- Dedicated chapters focused on essential sensory functions cover speech mapping, asleep motor mapping, awake subcortical language mapping, and visual cortex and visual tract mapping
- Disease- and region-specific techniques that encompass extra-operative brain mapping for epilepsy, surgery mapping for insular tumors, seizure mapping, and brainstem and spinal cord mapping
- Clinical pearls on postoperative issues such as rehabilitation, emergence of DBS-evoked functional connectomics, brain neuroplasticity, and radiating eloquent areas
High-quality illustrations and videos enhance understanding of brain regions targeted in different mapping techniques.

This is the most comprehensive resource available to date on brain mapping and surgery in eloquent regions. As such, it is a must-have for neurosurgical residents, fellows, practicing neurosurgeons, and allied healthcare practitioners who treat patients with brain conditions.

**COMPETITION**

**CONTENTS**

**Section I: Preoperative Brain Mapping Features**

*Part 1: Brain Anatomy and Pathology*

1 The Early History of Intraoperative Brain Mapping
2 Anatomy of Eloquent Cortical Brain Regions
3 Anatomy of Eloquent White Matter Tracts

*Part 2: Preoperative Mapping Adjuncts*

4 Direct Functional Mapping Using Radiographic Methods (fMRI and DTI)
5 Indirect Functional Mapping Using Radiographic Methods
6 Neurophysiology of Identifying Eloquent Regions
7 Extraoperative Mapping for Epilepsy Surgery: Epilepsy Monitoring, Wada, and Electrocorticography
8 Neuropsychologist’s Role in the Management of Brain Tumor Patients

**Section II: Intraoperative Brain Mapping**

*Part 1: Awake*

9 Awake Craniotomy Operating Room Setup and Surgical Instruments
10 Anesthetic Considerations for Intraoperative Cerebral Brain Mapping
11 Speech Mapping
12 Motor Mapping (Rolandic, Pre-Rolandic, and Insular Cortex)
13 Awake Subcortical Mapping of the Ventral and Dorsal Streams for Language
14 Surgery Around the Command and Control Axis: The Default Mode, Control, and Frontal Aslant Systems
15 Mapping and Surgery of Insular Tumors
16 Mapping of the Visual Pathway
17 Seizure Mapping Surgery

*Part 2: Asleep*

18 Asleep Motor Mapping
19 Brainstem and Spinal Cord Mapping

**Section III: Postoperative Brain Mapping for Recovery of Function**

20 Importance of Rehabilitation after Eloquent Brain Surgery
22 Neuroplasticity and Rewiring of the Brain
23 Radiating in Eloquent Regions
Neurosurgical vignettes in question and answer format provide robust prep for the ABNS oral exam!

The cases are broadly divided into seven sections—tumor, vascular intracranial pathology, trauma, pediatric, functional, spine, and peripheral nerves. The chapters are arranged in a manner that mirrors the oral board exam. Each case includes a brief clinical scenario followed by questions on presentation, diagnosis, imaging, management, surgical detail, complications, and outcome. The presented information is backed by the latest available evidence-based references and data.
Key Features:

- Contributions from internationally renowned neurosurgical educators
- Detailed answers enhance readers' knowledge and provide guidance on how to respond to questions asked in the oral board exams
- More than 430 high-quality images, many in full color, ensure visual understanding of key concepts
- Suggested readings at the end of cases offer additional study resources

This is an indispensable, one-stop resource for neurosurgical residents and fellows prepping for the ABNS and Royal College oral board examinations. Neurosurgeons studying for recertification will also find this book an invaluable reference for rapid review.

State-of-the-art solutions to restore hand function in patients with difficult hand ailments

The intricate balance of the intrinsic and extrinsic soft tissue structure and bony scaffold of the hand, coupled with 31 articulating services in the hand and wrist, can lead to significant surgical challenges. Providing surgeons with technical pearls to overcome these challenges is the primary focus of *Problems in Hand Surgery: Solutions to Recover Function* by internationally renowned hand surgeons Michael W. Neumeister and Michael Sauerbier, and an impressive group of contributors.

Organized by 29 sections and 90 chapters, this comprehensive book focuses on secondary hand surgeries to optimize hand form and function in patients with challenging trauma- and disorder-related hand issues. Among the many topics addressed are problems associated with nonunion, malunion, dysvascular limbs, trauma-related degenerative changes, stiffness, tendon dysfunction, joint disruption, nerve injury, neuropathy, vasospasm, fractures, and osteoarthritis.

**Key Highlights**

- Unique approaches for stiff fingers, recurrent cubital tunnel and ulnar neuropathy, suboptimal bone healing/avascular necrosis in the hand and wrist, and more
- High-quality videos provide insightful guidance on various surgical techniques
- Over 1,100 color illustrations and preoperative, intraoperative, and postoperative images help readers visualize the steps involved in each operative procedure

The extraordinary clinical tools in this step-by-step surgical resource will help orthopaedic surgery residents and experienced orthopaedic and plastic surgeons manage difficult cases and achieve optimal patient outcomes.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

CONTENTS

Section I: Problems with Nailbed Repairs
Chapter 1: Nonadherence of the Nail Plate
Chapter 2: Posttraumatic Split Nails
Chapter 3: Gentian Violet Treatment of Severe Chronic Paronychia

Section II: Problems with Trigger Release
Chapter 4: Bowstringing

Section III: Problems with Dupuytren's Disease
Chapter 5: Exposed Tendons
Chapter 6: Acute Vascular Compromise After Dupuytren's Fasciectomy
Chapter 7: Secondary Contractures
Chapter 8: Complications of Dupuytren's Contracture Treatment

Section IV: Problems with Flexor Tendon Repair
Chapter 9: Flexor Tendon Rupture
Chapter 10: Adhesions of the Flexor Tendon
Chapter 11: Bowstringing of the Flexor Tendon
Chapter 12: Ruptured Flexor Pollicis Longus Tendon

Section V: Problems with Extensor Tendon Repair
Chapter 13: Extensor Lag
Chapter 14: Stiffness in the Extensor Tendon
Chapter 15: Relative Motion Treatment of Chronic Boutonniere Deformity
Chapter 16: Management of Chronic Sagittal Band Rupture
Chapter 17: Post-Traumatic Swan-Neck Deformity

Section VI: Problems with Vasospasm
Chapter 18: Refractory Raynaud's Phenomenon

Section VII: Problems with Compression Neuropathy
Chapter 19: A Practical Approach to Recurrent Carpal Tunnel Syndrome
Chapter 20: Recurrent Carpal Tunnel Syndrome
Chapter 21: Failed Carpal Tunnel Release: Recognizing the Lacertus Syndrome
Chapter 22: Cubital Tunnel Release at the Elbow
Chapter 23: Recurrent Cubital Tunnel
Chapter 24: Recurrent Ulnar Neuropathy
Chapter 25: Radial Tunnel Release in the Forearm

Section VIII: Problems with Nerve Repair
Chapter 26: End Neuroma
Chapter 27: Pain Following Nerve Repair

Section IX: Problems with Nerve Palsy
Chapter 28: Finger Contractures

Section X: Sarcoma
Chapter 29: Incomplete Resection of Sarcoma at the Hand

Section XI: Problems with Soft Tissue Coverage
Chapter 30: Perfusion Problems
Chapter 31: The Bulky Flap
Chapter 32: Contracture After Acute Trauma Surgery of a Blast Burn
Chapter 33: Dorsal Hand Defect

Section XII: Problems with Nonarticular Phalanx Fractures
Chapter 34: Malrotation in Nonarticular Phalanx Fractures
Chapter 35: Nonunion in Nonarticular Phalanx Fractures
Chapter 36: Stiffness and Hardware Problems in Nonarticular Phalanx Fractures
Chapter 37: Angulation in Nonarticular Phalanx Fractures

Section XIII: Problems with Articular Phalanx Fractures
Chapter 38: Angulation in Articular Phalanx Fractures
Chapter 39: Post-Traumatic Bone Loss in Articular Phalanx Fractures
Chapter 40: Fracture after Prior Kirschner Wire Fixation
Chapter 41: Contractures in Articular Phalanx Fractures

Section XIV: Problems with Metacarpal Fractures
Chapter 42: Nonunion in Metacarpal Fractures
Chapter 43: Malunion in Metacarpal Fractures
Chapter 44: Angulation in Metacarpal Fractures

**Section XV: Problems with Basalar Joint Osteoarthritis**
Chapter 45: Recurrent Pain in Basalar Joint Osteoarthritis
Chapter 46: Painful Proximalization of First Metacarpal After Trapeziectomy
Chapter 47: Metacarpal Phalangeal Hyperextension

**Section XVI: Problems with Metacarpophalangeal Osteoarthritis After Implant Arthroplasty**
Chapter 48: Intraoperative Instability During Metacarpophalangeal Joint Arthroplasty for Osteoarthritis
Chapter 49: Revision of Subsided Pyrocarbon Implants

**Section XVII: Problems with Interphalangeal Osteoarthritis**
Chapter 50: Failed Silicone Proximal Interphalangeal Joint Arthroplasty
Chapter 51: Stiffness in Interphalangeal Osteoarthritis
Chapter 52: Contracture in Interphalangeal Osteoarthritis
Chapter 53: Proximal Interphalangeal Post-Traumatic Osteoarthritis

**Section XVIII: Problems with Infection in the Thumbs, Fingers, and Wrist**
Chapter 54: Inadequate Drainage of Infection in the Thumbs, Fingers, and Wrist
Chapter 55: Salvage of Osteomyelitis of the Distal Radius after Internal Fixation of an Open Fracture
Chapter 56: Infectious Destruction of the Wrist

**Section XIX: Problems with Replantation**
Chapter 57: Stiffness After Replantation
Chapter 58: Failed Replant: Ray Amputation
Chapter 59: Failed Replant: Toe-to-Hand Reconstruction
Chapter 60: Failed Replant: Great Toe Transfer
Chapter 61: Failed Replant: Failed Degloving Revascularization
Chapter 62: Attempted Replantation
Chapter 63: Nonunion Following Digital Replant
Chapter 64: Nonunion Following Major Replant
Chapter 65: Painful Finger after Bony Nonunion
Chapter 66: Stiff Fingers and Elbow After Replantation
Chapter 67: Poor Grip or Weak Motion After Replantation

**Section XX: Problems with Complex Regional Pain Syndromes**
Chapter 68: Complex Regional Pain Syndrome

**Section XXI: Problems with Scaphoid Fractures**
Chapter 69: Nonunion of the Proximal Pole
Chapter 70: Scaphoid Nonunion with Avascular Necrosis
Chapter 71: Scaphoid Revision Nonunion
Chapter 72: Scaphoid Nonunion
Chapter 73: Scaphoid Implant Malplacement

**Section XXII: Problems with Scapholunate Instability**
Chapter 74: Failed Scapholunate Ligament Repair: Acute
Chapter 75: Failed Reconstruction with Tenodesis: Chronic

**Section XXIII: Problems with the Lunotriquetral Joint**
Chapter 76: Problems with the Lunotriquetral Joint After Ligament Repair
Chapter 77: Problems with Lunotriquetral Fusion

**Section XXIV: Problems after Partial Wrist Fusions**
Chapter 78: Complications of Partial Wrist Fusion
Chapter 79: Dislocated Lunar Facet Fragments and Radioscapholunate Arthrodesis

**Section XXV: Total Wrist Arthroplasty**
Chapter 80: Implant Migration After Total Wrist Arthroplasty

**Section XXVI: Problems with Triangular Fibrocartilage Complex Tears**
Chapter 81: Pain After Triangular Fibrocartilage Complex Tears
Chapter 82: Persistent Instability After Triangular Fibrocartilage Complex Tears

**Section XXVII: Problems with Ulnar Impaction**
Chapter 83: Arthroscopic Treatment of Ulnar Impaction
Your one-stop source of complete imaging information for the evaluation of thoracic conditions and diseases in all modalities

Due to the remarkable concentration of various vital organs that can be visualized in thoracic imaging, the region occupies a firm central place in the spectrum of diagnostic imaging.

The book is based on the contents of the curriculum for thoracic imaging of the European Society of Radiology and covers the gamut of issues in thoracic imaging that radiologists are faced with in their daily clinical practice.

Contents are divided into four main sections: fundamentals of diagnostic thoracic imaging, diseases of the chest and special findings, differential diagnostic considerations and incidental findings, and glossary.

Key Features:

- Full coverage of all disease entities as they affect the lungs, airways, pleura, mediastinum, thorax wall and diaphragm, thoracic arteries and veins, and the heart
- All imaging modalities are covered in detail: projection radiography, fluoroscopy, ultrasound, CT, and MRI, as well as digital image postprocessing
- Subsections concentrate on the more critical findings, such as pulmonary nodules and cavitary lesions
- Special section on occupational pulmonary diseases
- Congenital malformations of the thorax, and much more

Diagnostic Imaging of the Chest is an essential reference guide for radiologists, both in training and in practice.

High-yield, image-rich study guide presents complex physics concepts in reader-friendly format

Physics is a key component of the American Board of Radiology core and certifying exams, therefore it is an essential area of study for radiology residents and young radiologists prepping for these exams. Radiology residents gather their medical physics knowledge from many sources, often beginning with their first encounter of a radiologic image. As such, *Radiologic Physics Taught Through Cases* by Jonathon A. Nye and esteemed contributors incorporates an image-rich, case-based layout conducive to learning challenging physics concepts.

The book encompasses physical diagnostic radiology scenarios commonly encountered during residency in a format that fosters learning and is perfect for board preparation. Seven technology-specific chapters cover fluoroscopy, mammography, computed tomography, magnetic resonance imaging, nuclear medicine, ultrasound imaging, and image processing. Each chapter features 10 succinct case-based topics intended to quickly convey information.

**Key Highlights**

- Every chapter starts with a general introduction, followed by case background, images, findings, and a brief explanation of the physical factors underlying the image's creation and displayed contrast
- Schematics detail important radiation safety topics, such as potential occupational or patient hazards related to fluoroscopic-guided procedures
- End-of-chapter references provide inspiration for further study
- Review questions with correct answers at the end of each chapter reinforce key concepts

This is a must-have resource for residents prepping for the radiology core exam review and early-career radiologists looking for a robust study guide for radiology certification exam review.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

Ultrasound Q&A Review for the Boards
by Adrian Dawkins, MD

Ultrasound Q&A Review for the Boards by esteemed radiologist and educator Adrian Dawkins and an impressive array of authors, delivers a robust test prep. Employing a self-evaluation approach, the book presents fundamental and practice-oriented concepts in ultrasound.

The overall layout mirrors the ABR board exams, with ultrasound images presented in a clinical framework followed by board-format multiple-choice questions. Chapters are generally organized by organ systems and encompass all major areas. The text starts with two chapters covering the first and second trimesters of pregnancy. Subsequent chapters encompass pediatric, renal, hepatobiliary, musculoskeletal, breast, neck, and scrotal ultrasound. The final two chapters on miscellaneous topics and physics ensure a more comprehensive review.

Key Features

- Easy-to-follow cases reinforce common ultrasound concepts, aiding in retention
- Practical questions and answers inspired by everyday practice include explanations for both the correct and incorrect answers, enhancing comprehension and knowledge
- References at the end of each chapter provide readers with resources for further exploration

This book provides an essential review for radiology trainees prepping for initial board certification and sonographers preparing for the boards.

Numerous advances in basic research, surgical techniques, practice, and patient care have revolutionized surgery over the last 60 years and made the field with its many subspecialties more diverse but also more complex.

The surgical profession places high demands on surgeons who must often make the right split-second decisions. This can easily lead to misjudgments or mistakes.

Learning From Failures in Orthopedic Trauma—Key Points for Success is the first book of its kind to give surgeons the opportunity to learn from failures without making them themselves.

Based on the Spanish book Errores en la Osteosíntesis by Rafael Orozco Delclós, this publication offers real case examples that have been collected over the past 25 years. It is an essential and valuable resource as it specifically examines the reasons and responses to surgical error in real cases from different anatomical regions of the body, thus helping surgeons avoid the most frequent errors in osteosynthesis.

The collection of more than 70 cases will help surgeons recognize and avoid common failures, start reflecting in action, present failures as positive learning opportunities, and bring that knowledge into their daily practice.

The book is divided into 9 sections that analyze different types of failures. Key features are:

- Analysis of failures to help surgeons avoid making mistakes that lead to those errors
- More than 20 detailed and illustrative case-based chapters that analyze failures and offer tips to successfully prevent those mistakes
- More than 1,100 x-rays, clinical images, and illustrations

There is no direct competition on the market.
CONTENTS

Section 1—Introduction to internal fixation
1.1 The evolution of internal fixation over the last 20 years

Section 2—Breachess of AO principles
2.1 General considerations on violation of AO principles
2.2 Osteosynthesis in unreduced fractures
2.3 Principles of stability, selection of implants, and the combination of absolute and relative stability
2.4 Biology management (including soft-tissue management)

Section 3—Implant-related issues
3.1 Implant selection issues
3.2 Type of implant related to biomechanical principles
3.3 Implant size, prebending, molding, and shape adapted to the fractured bone
3.4 Anatomical implants: ready-to-wear versus custom-fit
3.5 Designs and techniques of intramedullary nailing
3.6 Failures due to guided targeting and implant assembly

Section 4—Surgical team
4.1 Determining factors for failures relating to the surgical team
4.2 Insufficient preparatory planning, including alternatives
4.3 Lack of anatomical knowledge
4.4 Insufficient asepsis protocols
4.5 Proficiency and experience
4.6 Accumulation of failures

Section 5—Postoperative management
5.1 General considerations in postoperative management of internal fixation
5.2 Physiotherapy
5.3 Implant removal

Section 6—Patient compliance
6.1 Failures unrelated to the healthcare team but related to patient compliance

Section 7—Failure recognition and timing
7.1 Early recognition of failures

Section 8—The learning circle
8.1 The learning circle: tips and tricks to minimize failures

Section 9—Bizarre failures
9.1 Difficult to classify

Appendix
A novel and indispensable handbook for clinical research coordinators worldwide

Because ‘saying isn’t doing; doing is doing’: This fourth volume in Mohit Bhandari’s series of methodology books, conceived as a transformational guide to executing research for those who coordinate it on a daily basis, focuses not on the design of research projects, but rather on the actual execution of such projects.

Key Features:

- International group of authors and practicing research coordinators with decades of collective hands-on experience
- Includes many crucial, but often neglected, topics such as principles of successful grant writing, working with study budgets, ethics and consent forms, regulatory versus standard trials, coordinating and conducting observational research and randomized clinical trials, and much more
- Many helpful templates and sample forms with checklists, consent forms, budget outlines, and more

A broad readership including scientists, physicians, surgeons, epidemiologists and statisticians, and industry research and development directors will welcome this unique and valuable book.

Otolaryngology, Neurosurgery, Neurology
Residents and above

EDITORS
Seilesh C. Babu, MD, is Neurotologist and Skull Base Surgeon, Department of Otology, Neurotology and Skull Base Surgery, Michigan Ear Institute, Farmington Hills, Michigan; Program Director, Ascension Macomb Otolaryngology Residency, Macomb, Michigan; Assistant Professor, Wayne State University Department of Otolaryngology, Detroit, Michigan.
Neal M. Jackson, MD, is Chief of Neurotology, Department of Otolaryngology and Neurosurgery, Tulane University School of Medicine, New Orleans, Louisiana.

DESCRIPTION
A unique guide to managing cranial neuropathy cost effectively—from diagnosis to treatment!

Cranial neuropathy can be a symptom of a devastating, life-threatening condition or a benign disease with spontaneous full recovery in a majority of patients. While testing options are available, they can be costly and sometimes may be unnecessary. Cost-Effective Evaluation and Management of Cranial Neuropathy by Seilesh C. Babu, Neal M. Jackson, and an impressive team of multidisciplinary contributors reflect decades of experience. Combining evidence-based medicine from the literature with years of firsthand expertise, this reader-friendly book offers cost-effective methodology and in-depth insights for evaluating and managing cranial neuropathy.

The textbook provides a clear-cut approach and practical algorithm for cranial nerve evaluation and management of neuropathy. Contributions from neurotologists, neurosurgeons, rhinologists, ophthalmologists, head and neck cancer surgeons, laryngologists, and speech language pathologists ensure a well-rounded and comprehensive approach. The text begins with an introduction to cost-effective management in medicine, laying a foundation for the book’s primary focus. It concludes with cranial neuropathy radiology considerations and a helpful cost-effective summary with key points.

Key Features:

- Unique algorithms provide clinicians with simple-to-follow, cost-effective methods for managing complex disorders that result in facial nerve weakness, hearing loss, and swallowing problems
- Pathology-specific chapters cover a wide range of conditions including olfactory disorders, vision disorders, audiovestibular disorders, facial and trigeminal nerve disorders, and spinal accessory nerve disorders
- Diagnosis and management of cranial nerve disorder symptoms such as vision loss, dysphagia, and dysphonia

This excellent resource is a must have for all clinicians who potentially encounter patients with cranial nerve weakness, including primary care and emergency medicine physicians, otolaryngologists, neurologists, and neurosurgeons.

**COMPETITION**

There is no other book on cranial neuropathy on the market, much less one focusing on cost-effective management.

**CONTENTS**

1 Introduction to Cost-Effective Evaluation of Cranial Neuropathy
2 Cranial Nerve I: Olfactory Nerve Disorders
3 Cranial Nerve II: Visual Disorders
4 Cranial Nerves III, IV, VI: Ocular Motor Cranial Nerve Disorders
5 Cranial Nerve V: Trigeminal Nerve
6 Cranial Nerve VII: Facial Nerve Disorders
7 Cranial Nerve VIII: Hearing Disorders
8 Cranial Nerve VIII: Vestibular Disorders
9 Cranial Nerves IX, X, XII: Dysphagia
10 Cranial Nerve X: Dysphonia
11 Cranial Nerve XI: Spinal Accessory Neuropathy
12 Radiology in Cranial Neuropathy
13 Conclusion and Discussion Points
This updated second edition of *Functional and Selective Neck Dissection* by Javier Gavilán, Alejandro Castro, Laura Rodrigáñez, and Jesús Herranz presents a unique point of view based on fascial dissection techniques developed by several generations of renowned surgeons at La Paz University Hospital. The book lays a foundation with in-depth discussion of fascial compartmentalization of the neck. The text covers the evolution of modern neck dissection, from George Crile in 1906 to current cutting-edge procedures, and details the transition from radical neck dissection to a less aggressive, equally effective approach for treating lymph node metastases in head and neck cancer.

The relationship between functional and selective neck dissection is discussed from a pragmatic and nonconventional perspective, elucidating the connection from historical, anatomic, and surgical standpoints. The authors differentiate conceptual approaches, keystones in the evolution of scientific knowledge from surgical techniques, technical variations of a standard procedure designed to most effectively resolve a problem. The primary goal is providing the reader with expert guidance on a full spectrum of fundamental surgical techniques.

Key Highlights

- Sequential operative photographs of actual procedures performed by the authors complemented by stellar illustrations further understanding of techniques
- Less radical operations discussed from American and Latin perspectives, ensuring a complete picture and integration of well-rounded best practices
- A chapter dedicated to hints and pitfalls offers insightful technical advice and precautions acquired through decades of practice
Frequently asked questions and answers afford key insights on important surgical decisions, while suggested readings provide additional helpful materials.

This is an indispensable resource for practicing head and neck surgeons who treat patients with malignant tumors. Otorhinolaryngology, general surgery, and plastic surgery residents will also find it an invaluable source of information.

**COMPETITION**

**CONTENTS**

Chapter 1: The Historical Outlook of Neck Dissection  
Chapter 2: The Rationale and Anatomical Basis for Functional and Selective Neck Dissection  
Chapter 3: The Conceptual Approach to Functional and Selective Neck Dissection  
Chapter 4: Surgical Technique  
Chapter 5: Hints and Pitfalls  
Chapter 6: Complications of Neck Surgery  
Chapter 7: Frequently Asked Questions with Answers
Skin malignancies frequently affect the periocular area, necessitating excision followed by eyelid reconstruction. Periocular trauma is also quite common, and because of the highly complex regional anatomy, requires expertise for effective reconstruction. Preparation by ophthalmic plastic surgeons prior to periorbital reconstruction is often not possible due to the unpredictability of defects left after Mohs micrographic surgeons clear tumor margins or in cases of trauma. *Eyelid Reconstruction* by renowned expert Suzanne Freitag and esteemed coeditors N. Grace Lee, Daniel Lefebvre, and Michael Yoon fills a void in the literature. The book provides a quick and practical ophthalmic plastic surgery guide on how to plan and perform a full spectrum of periocular reconstruction procedures.

The textbook is a compilation of patient cases and the authors' vast, richly diverse expertise. The book starts with two chapters covering complex periorbital anatomy and basic surgical principles, both of which are critical to performing safe and effective surgery. The third chapter provides a comprehensive overview of Mohs surgery in the periorbital area, an important topic given many defect reconstructions are secondary to Mohs micrographic surgical excisions. Subsequent chapters, organized by anatomic region, feature discussion of surgical approaches for reconstructions of various size and depth defects. The final chapter details eyelid trauma repair, including lid margin and lacrimal lacerations.

**Key Features**

- An essential go-to pre- or peri-operative reference surgeons can consult quickly as reconstruction cases arise
- Practical and concise procedural descriptions accompanied by numerous high-quality photographs and illustrations enhance comprehension
Chapters dedicated to medial canthus, lower eyelid, upper eyelid, and lateral canthus reconstruction procedures discuss special considerations based on underlying anatomy, adnexal structures, and required functions.

This is a must-have resource for residents, fellows, and experienced surgeons in the fields of ophthalmic plastic surgery, ophthalmology, otolaryngology, facial plastic surgery, plastic surgery, dermatology, Mohs surgery, and maxillofacial surgery.

**EDITORS**  
**Ryan C. Branski, PhD, CCC-SLP,** is Associate Professor, Department of Otolaryngology–Head and Neck Surgery and Communicative Sciences and Disorders, NYU School of Medicine; and Associate Director, NYU Voice Center, New York, New York, USA.

**Sonja M. Molfenter, PhD, CCC-SLP,** is Assistant Professor, Department of Communicative Sciences and Disorders, School of Culture, Education and Human Development, New York University, New York, New York, USA.

**DESCRIPTION**  
*Exceptionally insightful speech-language pathology textbook highlights individual cases to augment learning!*

*Speech-Language Pathology Casebook* by Ryan Branski, Sonja Molfenter, and an impressive array of contributors presents a diverse spectrum of cases covering communication, voice, and swallowing disorders in children and adults. Readers are provided with rich and varied narratives underscoring the fact that clinical intervention of speech-language disorders is an art form based on science. Evidence-based assessments and treatments cover a variety of settings including medical inpatient, outpatient, and skilled nursing facility; home health; school; community-based; and private practice.

Eighty cases following a standardized format encompass a wide range of congenital and acquired disorders spanning the age continuum. Each case includes a clinical history and description, evaluations/testing, diagnosis, treatment, outcomes, questions and answers, suggested readings, and references. With invaluable firsthand insights from practitioners, this unique resource enhances the ability to develop effective, patient-informed interventions.

**Key Highlights**

- Discussion of problems frequently omitted from typical curricula, but increasingly relevant to contemporary clinical practice, ranging from telepractice to transgender voice modification
- Speech-related issues in children associated with cleft palate, autism spectrum disorder, stuttering, bilingual language delays, severe intellectual disability, congenital porencephaly, FASD, apraxia, and many others
- Medical conditions in adults that impact speech-language, such as traumatic brain injury, ALS, right hemisphere disorder, stroke, autoimmune encephalopathy, dementia, Parkinson’s disease, autism, and more
- Videos, audio, bulleted key points, and handy comparative charts provide additional pearls
The detailed case narratives enable speech-language students to connect and apply theory and knowledge acquired in the classroom to real-life clinical practice. Instructors and speech-language pathologists will also benefit from this excellent teaching and clinical reference.

**COMPETITION**

**CONTENTS**

Case 1. Completely Normal Speech is the Goal in a Child Born with Cleft Palate  
Case 2. Assessment and Treatment of Preschool Fluency  
Case 3. Working Collaboratively with a Young Child with Autism Spectrum Disorder  
Case 5. Language Delay in a Bilingual Child  
Case 6. Application of Dynamic Assessment of Narratives in an English Language Learner  
Case 7. Stuttering in Young Children  
Case 8. Evaluation and Intervention for a Young Child with Severe Intellectual Disability  
Case 9. Assessment and Treatment of a School-Aged Speech-Sound Disorder  
Case 10. Assessment and Treatment of Pediatric Dysphonia with a Complex Medical History  
Case 11. Augmentative and Alternative Communication in a Child with Congenital Porencephaly  
Case 12. The Importance of Re-assessment following a School-Based Individualized Education Plan (IEP) Referral: A Case of Cluttering  
Case 13. Prioritizing Communication Supports for an Adolescent with Intellectual Disability  
Case 14. Language Impairment in a Child with Suspected Fetal Alcohol Spectrum Disorder  
Case 15. Speech Rehabilitation Following Cleft-Palate Repair  
Case 16. Disorder, Difference, or Gap? A School-Age Disability Evaluation  
Case 17. Social Communication Intervention for a Child with Autism Spectrum Disorder  
Case 18. Reading Comprehension Difficulties in an Elementary-School Student  
Case 19. Childhood Apraxia of Speech  
Case 20. Severe Speech-Sound Disorder with Motor Involvement  
Case 21. Treatment of Childhood Onset Fluency Disorder in a High School Student  
Case 22. Language-based Learning Disability and Literacy in a School-aged Student  
Case 23. Global Language Impairment in a Preschooler with Autism  
Case 24. Voice Care for the Child Who Is Post-Airway Reconstruction: Special Challenges  
Case 25. Autism Spectrum Disorders and Word Associations  
Case 26. Combined Modality Fluency Therapy in a Teenager with Severe Stuttering  
Case 27. Pediatric Feeding & Swallowing Impairment in a Child with a Craniofacial Disorder  
Case 28. Selective Mutism: A Pragmatic Approach  
Case 29. School-Based Swallowing and Feeding Treatment: Oral Phase Dysphagia Secondary to Cerebral Palsy and Möbius Syndrome  
Case 30. Early Identification and Early Intervention in the Birth-to-Three Population  
Case 31. Treatment of Pragmatic Language Disorders in Preschool and School-Aged Children  
Case 32. Cognitive Linguistic Deficits in Pediatric Acquired Brain Injury  
Case 33. A Holistic Approach to Treating a Pre-School Aged Child Who Stutters  
Case 34. Language and Cognitive Deficits Associated with Landau–Kleffner Syndrome  
Case 35. Feeding and Language Therapy in a Child with Congenital Cytomegalovirus and Traumatic Brain Injury  
Case 36. Psycholinguistic Approach to Assessment and Treatment of Complex Speech-Language Impairment in a School-Age Child  
Case 37. Treatment of Communication and Feeding Disorders in a Complex Pediatric Patient with a Neurogenic Disorder  
Case 38. Language Assessment in a Child with Minimal Verbal Skills  
Case 39. The Case of a Profound Phonological Disorder in a Preschooler  
Case 40. Childhood Motor Speech Disorders in a Child with 7q11.23 Duplication Syndrome
Case 41. Prioritizing Clinical Decisions in a Complex Medical Case
Case 42. Transfeminine Voice Training
Case 43. Cognitive Rehabilitation following a Severe Traumatic Brain Injury
Case 44. Multiple Unmanaged Concussions in a Collegiate Rugby Athlete
Case 45. Management of Swallow Function in a Patient with an Orocutaneous Fistula
Case 46. Evidence-Based Intervention for Dysarthria in a Patient with Amyotrophic Lateral Sclerosis
Case 47. Rehabilitation of Right Hemisphere Disorder in the Chronic Phase of Recovery
Case 48. Reading as Intervention for a Skilled Nursing Facility Resident with Dementia
Case 49. Speech-Language and Dysphagia Assessment in a Bilingual Female Post-CVA
Case 50. Ancient Modification in a 30-Year-Old L1 Ukrainian Speaker
Case 51. Influence of Cognitive Status on AAC Intervention in a Case of Amyotrophic Lateral Sclerosis
Case 52. Dysarthria Associated with Parkinson's Disease
Case 53. Stroke-Induced, Moderate, Acquired Apraxia of Speech and Nonfluent Aphasia
Case 54. Compensatory and Restorative Application of AAC in Chronic, Severe Aphasia
Case 55. Functional Language Rehabilitation in Non-Fluent Aphasia
Case 56. Differential Diagnosis in Spasmodic Dysphonia vs. Muscle-Tension Dysphonia
Case 57. Aphasia and Dysphagia in a Patient Bound to a Skilled Nursing Facility
Case 58. Multiple Cranial Neuropathies and Posterior–Inferior Cerebellar Artery Aneurysm following a Traumatic Brain Injury
Case 59. Script Training in Nonfluent/Agrammatic-Primary Progressive Aphasia
Case 60. Hyperkinetic Dysarthria: Dystonic Features in a Patient with a History of Brainstem Encephalitis
Case 61. Exploring Clinician Readiness for Interstate Telepractice
Case 62. Paradoxical Vocal Fold Motion in a High-Level Athlete
Case 63. Accent Modification in a Thai Speaking Graduate Student
Case 64. Conversation Training Therapy for a Professional Voice User
Case 65. Psychogenic Stuttering in an Adult
Case 66. Aural Rehabilitation of a Sequential Bilateral Cochlear Implant User
Case 67. The Role of Stimulability Testing and Voice Therapy for Patients with Large Benign Vocal Folds
Case 68. Dystussia and Dysphasia in Parkinson's Disease
Case 69. Injury Prevention for a Touring Professional Singer with Phonotrauma
Case 70. Dysphagia in Generalized Dystonia following Deep Brain Stimulation
Case 71. Speech Therapy Telepractice Program for a Client with Aphasia
Case 72. Linguistic and Cognitive Deficits in Autoimmune Encephalopathy
Case 73. Stroke-Induced Aphasia and Dysphagia: Acute and Long-Term Implications
Case 74. Cognitive Rehabilitation for a Combat-Injured Veteran with Mild TBI and Comorbid Conditions
Case 75. Interdisciplinary Collaboration for Alzheimer's Disease
Case 76. Efficacy of Transcranial Direct Current Stimulation in Post-Traumatic Stress Disorder
Case 77. Management of Patients at End of Life
Case 78. Augmentative and Alternative Communication for Broca's Aphasia
Case 79. Utilization of Self-Help Activities for an Adult Who Stutters
Case 80. Targeting Social Communication Skills for an Adult with Autism Spectrum Disorder
**Histology: An Essential Textbook**

**Editors**  
D. J. Lowrie, Jr., PhD, is Professor, Department of Medical Education, College of Medicine, University of Cincinnati, Cincinnati, Ohio, USA.

**Description**  
Learn to identify histological structures and their correlated functions!

*Histology: An Essential Textbook* is a concise, multimedia study guide for medical students who need to learn the functions and related correlations of cells, tissues, and organs of the human body. Professor D.J. Lowrie, Jr. has written a unique and practical medical histology resource based on self-directed modules originally created to replace live histology laboratory sessions. This resource will help medical students learn how to identify histological structures on slide preparations and electron micrographs. Short videos by the author, who demonstrates structures via digitized histology slides, provide additional guidance.

Shorter, targeted concepts and brief explanations accompanied by numerous illustrations, self-assessment quizzes, and videos demonstrating key features of histological structures set this resource apart from existing, text-dense books.

**Key Features**

- Approximately 600 images, consisting primarily of electron and light micrographs, aid in identification of histological structures and long-term retention
- Correlation of histological structure with other basic science disciplines, such as gross anatomy, embryology, and pathology allows students to integrate material effectively
- About 350 online multiple choice questions and answers mirror exam topics students frequently encounter in curriculum and the USMLE®
- Nearly 375 videos provide a personal tutor that teaches students histological structures, while providing tips for proper identification

This is a must-have self-study guide for medical students, as well as a stellar teaching tool for instructors.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**Contents**  
1. Introduction to Microscopy and the Cell  
2. Nucleus
The widespread use of organoboron compounds justifies the efforts devoted to their synthesis, as well as toward developing an understanding of their reactivity. The nature of the mono- or diboron species is of paramount importance in determining the reversible covalent binding properties of the boron atom with both nucleophiles and electrophiles. By wedding the rich chemical potential of organoboron compounds to the ubiquity of organic scaffolds, advanced borylation reactions have the potential to open unprecedented synthetic alternatives, and new knowledge in the field should encourage chemists to use organoboron compounds. In this volume, the main objective is to provide a collection of the most useful, practical, and reliable methods, reported mainly within the last decade, for boron activation and boron reactivity. The volume covers the main concepts of organoboron compounds and includes experimental procedures, enabling newcomers to the field the instant and reliable application of the new tools in synthesis. Rather than aiming for a comprehensive coverage, the most advanced solutions for challenging transformations are introduced. To this end, a team of pioneers and leaders in the field have been assembled who discuss both the practical and conceptual aspects of this rapidly growing field.
The field of dual catalysis has developed rapidly over the last decade, and these volumes define its impact on organic synthesis. The most important, basic concepts of synergistic, dual catalytic cycles are introduced, providing newcomers to the field with reliable information on this new approach to facilitating the synthesis of organic molecules. Background information and reliable procedures for challenging transformations in synthesis are presented, applying the concept of cooperative dual catalysis as a means of increasing molecular complexity in the most efficient manner. The most useful, practical, and reliable methods for dual catalysis combining metal catalysts, organocatalysts, photocatalysts, and biocatalysts are presented.

**DESCRIPTION**  
*Put yourself in the box seat at exam time …*

The days of cramming dry anatomical facts are over. It’s time to look at anatomy as an opportunity to appreciate a fascinating world of relationships and interconnections.

Featuring:

- The complete spectrum of systematic and topographic anatomy: clearly structured and vividly presented, featuring superb high-quality images
- A combined text and atlas: takes into account a variety of species, an ideal resource for developing a comprehensive understanding of anatomical structures and relationships
- Integrated sectional anatomy and contemporary diagnostic imaging: a window into the application of anatomy in diagnostics

Highlights you won’t want to miss:

- A new chapter on avian anatomy: the fundamental structural features of birds, at a glance
- Over 1100 exceptional images: anatomical specimens and histological images, thin slice plastinations, colour schematics, diagnostic imaging, sectional anatomy
- Numerous references to clinical and applied anatomy: including equine endoscopy, arthrocentesis, examination of the udder, rectal examination and laparotomy
- A unique bonus: CT, MRI and ultrasonographic images

Bringing anatomy to life!

**DESCRIPTION**

Unique guide to coordinated and optimized treatment of common neurological diseases

Neurological and neurodegenerative diseases have a significant impact on a patient's functionality, independence, and overall quality of life. Multidisciplinary clinical care, coordination, and treatment modifications are key to increasing survival rates and enhancing the well-being of these patients. *Neurological Diseases: Implications in Medical and Dental Practices* by Armin Ariana provides essential details on managing the neurological diseases commonly seen by general healthcare and dental practitioners and the importance of collaborative treatment.

The text starts with an introduction to neurological diseases followed by eight disease specific chapters: Parkinson Disease, Multiple Sclerosis, Amyotrophic Lateral Sclerosis (ALS), Alzheimer Disease, Stroke, Epilepsy and Other Seizure Disorders, Myasthenia Gravis, and Facial Paralysis. Every chapter starts with an introduction and background, then succinct sections covering epidemiology, etiology and pathogenesis, potential genetic factors, clinical symptoms, diagnosis, and current treatment/management approaches.

**Key Highlights**

- The integral role of medical history, physical examination, and clinical and paraclinical testing in optimizing medical management and treatment
- How disease-specific oral medications impact patients in dental care settings, prior to and during treatment
- Why multidisciplinary healthcare coordination between physicians, dentists, and other healthcare providers is vital to improved patient outcomes and quality of life

This book is essential reading for medical students during neurology rotation, dental students who need clinical insights on how to treat patients with neurological diseases, and early-career medical and dental practitioners.

**Editors**

Robin Wilding, BDS, Dip Pros, M Dent, PhD, MSc, is Emeritus Professor, Department of Dental Prosthetics, University of the Western Cape, Cape Town, South Africa.

**Description**

Case-based dentistry resource details the art of crafting basic to complex dental prosthodontics

Case Guides to Complete and Partial Denture Prosthodontics by prosthodontist and educator Robin Wilding is designed to take dental students on a progressive journey through a sequence of case guides that are based on actual patient scenarios. This comprehensive resource presents clinical challenges in stepwise increments, starting with a one-tooth partial denture and concluding with an implant-supported mandibular overdentures. By mastering less complicated prosthetics first, students are able to gain the necessary skills and confidence to manage more advanced cases.

**Key Highlights**

- Eleven clinical scenarios reflect those a student or general dentist will likely encounter in daily practice
- Basic science content offered in separate appendices provides relevant scientific background for each case, while keeping the focus on clinical skills
- Highly-rated appendices cover practice management topics, including patient FAQs
- Videos provide step-by-step guidance on performing specific procedures, from duplicating and placing a denture to solving the problems of an unstable mandibular complete denture

This guide is an essential learning resource for dental students and an excellent teaching tool for dental school instructors.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

Your New Dentures: Frequently Asked Questions
Featuring more than 1,100 expertly drawn illustrations and images, the *Advanced Craniomaxillofacial Surgery* book is the comprehensive, highly anticipated follow-up to the original work on *Principles of Internal Fixation of the Craniomaxillofacial Skeleton* that was published in 2012.

With detailed contributions from more than 80 renowned international authors, *Advanced Craniomaxillofacial Surgery* significantly builds on the solid foundation laid by the previous textbook. The new book comprises sophisticated techniques in skeletal and soft-tissue analysis for the disciplines of craniomaxillofacial, trauma, tumor, orthognathic surgery, as well as facial and esthetic surgery.

The focused expertise of seven disciplines is synthesized together to offer comprehensive and unique interdisciplinary perspectives, necessary to create the "team" approach fundamental to achieving the progress required and expected in high-level medical centers: oral and maxillofacial surgery, plastic and reconstructive surgery, otolaryngology, neurosurgery, ophthalmology, oculoplastic surgery, and head and neck surgery. Nowhere else has there been such a thorough and comprehensive multispecialty approach presented in the head and neck region.

The advent of microvascular surgery, skeletal analysis, computerized surgical planning, personalized implant creation, and comprehensive radiographic analysis have given rise to new principles, techniques and possibilities, which are explored extensively in this new textbook. *Advanced Craniomaxillofacial Surgery* should be part of every surgeon’s library.
CONTENTS

1 Bone grafts, bone flaps, bone replacement materials and techniques
   1.1 Types and harvest of bone grafts and bone flaps
   1.2 Bone lengthening by distraction
   1.3 Ceramic bone substitute materials
   1.4 Growth factors for craniomaxillofacial applications

2 Ablative and reconstructive surgery of the mandible
   2.1 Access osteotomies in the mandible in tumor surgery and osteosynthesis
   2.2 Mandible resections without loss of continuity (rim resections)
   2.3 Benign noncontinuity intraosseous lesions
   2.4 Segmental defects, defect bridging, reconstruction with free nonvascularized bone grafts
   2.5 Reconstruction of the condyle
   2.6 Mandible reconstruction with microvascular free flaps
   2.7 Reconstruction with prefabricated flaps

3 Ablative and reconstructive surgery of the midface and craniofacial junction
   3.1 Approaches and access osteotomies to the midface
   3.2 Midface resection and reconstruction
   3.3 Ablative and reconstructive surgery of the orbit
   3.4 Secondary frontal sinus surgery
   3.5 Access surgery to the skull base
   3.6 Reconstruction of the skull base
   3.7 Reconstruction of the cranial vault
   3.8 Secondary corrections after orbital/nasoethmoidal fractures

4 Correction of complex deformities and conditions of the craniofacial skeleton
   4.1 Treatment of gunshot injuries
   4.2 Treatment of malalignment and incorrect occlusion
   4.3 Treatment of ankylosis
   4.4 Ridge augmentation of the atrophic maxilla and mandible
   4.5 Hemifacial microsomnia diagnosis, classification, and management
   4.6 Cleft bone grafting and management of the alveolar ridge defect
   4.7 Unilateral and bilateral total clefts
   4.8 Distraction osteogenesis of the maxilla with external devices
   4.9 Midface advancement with internal distractors
   4.10 High midface osteotomies
   4.11 Craniosynostosis
   4.12 Orbital hypertelorism
   4.13 Encephalocoeles
   4.14 Medication-related osteonecrosis of the jaw

5 Imaging and planning technologies
   5.1 Endoscopy in mandibular condyle and midfacial trauma care
   5.2 3-D manufacturing technologies and their applications in craniomaxillofacial surgery
   5.3 Navigation and computer planning in craniofacial reconstruction
   5.3.1 Introduction
   5.3.2 Image analysis: data acquisition and processing
   5.3.3 Virtual models and segmentation
   5.3.4 Biomodels
   5.3.5 Intraoperative navigation
   5.3.6 Intraoperative imaging and quality control
   5.3.7 Surgically preformed implants: nonpatient specific
   5.3.8 Industrially preformed orbital meshes
   5.3.9 Preformed mandible plates
5.3.10 Patient-specific mandible implants
5.3.11 Patient-specific implants for craniofacial reconstruction
5.3.12 Computer-assisted surgical planning and execution: models, cutting and drill guides, positioning aids, and patient-specific implants
5.3.13 Orthognathic surgery and automated splint manufacturing
5.3.14 Interspeciality interface in head and neck oncology—current clinical use of computer-assisted surgery and future perspectives
5.3.15 Computer-assisted techniques in orbital surgery for thyroid eye disease

6 Principles and techniques for facial allotransplantation

Thieme Group
Returns Policy

Effective from 1st January 2009

All consignments by Thieme Publishers are delivered without any automatic returns authorization provision. All returns are governed by the following rules:

General Remarks
• For all returns, authorization is granted strictly at the discretion of the publisher, except for faulty, damaged or wrongly delivered titles (see below)
• The basic principle for returns in any one year is that these should not exceed 5% of the previous year’s net turnover for any one company
• The publisher does not guarantee to send back any products that are outside these returns rules and reserves the right to destroy these without compensation.
• Transport costs for returns are covered by the sender (except for Item 4)

1) Full credit can be granted only if
• prior permission to return has been requested and authorized
• the request for permission to return states invoice number, date, and reason for return
• returns are in mint condition, without defacing marks, stickers or security devices
• the request for return authorization is made at the latest twelve (12) months from invoice date
• returns are made directly to our warehouse address

2) No credit will be granted if products are
• returned without prior authorization
• not returned in a resalable condition as described above
• not accompanied by a delivery note listing invoice numbers and dates
• old or out-of-print editions returned more than three (3) months after publication of the new edition

3) No returns can be accepted or authorized
• if made or requested later than twelve (12) months from invoice date
• if made for the previous edition of a newly published work later than 3 months from publication date
• for offline electronic or audiovisual material for continuation orders, series orders and reduced-price or special priced books or sets
• for books with a selling price value (gross) of less than Euro 50.

4) No prior permission is required for
• imperfect copies
• wrongly delivered books (publisher’s error)
In such cases, please include invoice number, date, and reason for return.
