2020 Quarter 3 Advanced Book Information

Featured Titles
- Aug-20 Dermal Fillers: Facial Anatomy and Injection Techniques, 1st Edition
- Aug-20 Anatomy for Dental Medicine, 3rd Edition

Neurosurgery Titles
- Jul-20 Neurosurgery Outlines, 1st Edition
- Aug-20 Pediatric Endoscopic Endonasal Skull Base Surgery, 1st Edition
- Sep-20 Minimally Invasive Spine Surgery: A Primer, 1st Edition

Plastic and Reconstructive Surgery Titles
- Sep-20 Plastic Surgery: A Practical Guide to Operative Care, 1st Edition
- Sep-20 Handbook of Reconstructive Flaps, 1st Edition
- Sep-20 Cosmetic Breast Surgery, 1st Edition

Dermatology Titles
- May-20 The Business of Dermatology, 1st Edition

Radiology Titles
- Aug-20 RadCases Plus Q&A Gastrointestinal Imaging, 2nd Edition
- Sep-20 Venous Interventional Radiology, 1st Edition
- Sep-20 Breast MRI Interpretation: Text and Online Case Analysis for Screening and Diagnosis, 1st Edition
- Sep-20 RadCases Plus Q&A Nuclear Medicine, 2nd Edition

Orthopaedic Titles
- Aug-20 Hand Surgery: Tricks of the Trade, 1st Edition
- Sep-20 Synopsis of Hip Surgery, 1st Edition

Ear, Nose, and Throat Titles
- Aug-20 Oral Cancer: Evaluation, Therapy, and Rehabilitation, 1st Edition

Student Titles
- Apr-20 Learning Microbiology and Infectious Diseases: Clinical Case Prep for the USMLE®, 1st Edition
- Aug-20 Thieme Review for the USMLE® Step 2: CS for IMGs, 1st Edition

Chemistry Titles
- Jul-20 Science of Synthesis: Knowledge Updates 2020/2, 1st Edition

Other Titles
- May-20 The Art of Cupping, 2nd Edition
- Jul-20 Applied Oral Physiology: The Integration of Sciences in Clinical Dentistry, 1st Edition
- Aug-20 The Surgical Handbook, 1st Edition
- Aug-20 Guide to Periodontal Treatment Solutions for General Dentistry, 1st Edition
- Sep-20 Surgical Decision Making in Acute Care Surgery, 1st Edition

**Editors**

André Braz, MD, is Medical Director, Dermatologia Laser Cosmiatria, Rio de Janeiro, Brazil.

Thais Sakuma, MD, is Medical Director, Thais Sakuma Dermatologia, Mato Grosso do Sul, Brazil.

**Description**

The quintessential visual guide to facial aesthetic enhancement and dermal filler injection techniques from top experts

In-depth and detailed knowledge of anatomy, different facial shapes, and ethnic origins is essential to delivering safe, effective, natural, and harmonious aesthetic facial treatment results. *Dermal Fillers: Facial Anatomy and Injection Techniques* is the culmination of many years of expertise decrypting facial anatomy as it applies to aesthetic enhancement of the face. This visually rich atlas is authored by internationally renowned Brazilian dermatologists André Braz, an esteemed expert in the use of botulinum toxin, fillers, and lasers; and Thais Sakuma, a distinguished lecturer in the application of botulinum toxin and hyaluronic acid fillers.

Nineteen highly practical, concise, and didactic chapters are organized consistently with structured text at the beginning of each chapter. The book encompasses the application of injection techniques for the full spectrum of indications, from softening wrinkles to facial contouring. Important topics include facial assessment, hyaluronic acid science, facial aging, and regional nerve blocks for pain management. Meticulous anatomic descriptions and images depict the relationships between superficial and deeper structures such as vasculature, thereby providing vital knowledge to help clinicians avoid potentially serious complications.

**Key Features:**

- Systematic organization based on aesthetic zones, from superficial to deep
- Richly illustrated, with 1664 outstanding drawings, remarkable cadaver dissection images, and patient photos
- Seventeen concise video sequences elucidate key injection techniques
- Comprehensive coverage of potential complications, such as unintended injection of filler into vasculature
- Expert discussion of safety issues, potential pitfalls, and the naturalness of expected outcomes

This is the ultimate resource for all dermatologists, plastic surgeons, and non-core practitioners who wish to expand their practices to offer complex facial cosmetic injection techniques and achieve optimal patient outcomes.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

CONTENTS

1. Facial Assessment
2. Anatomy of the Face
3. Biophysical Properties of Hyaluronic Acid
4. Anatomy of the Aging Process
5. Anesthetic Block
6. Filler Injection of the Temporal Region
7. Filler Injection of the Eyebrows
8. Filler Injection of the Forehead
9. Filler Injection of the Glabella
10. Filler Injection of the Malar and Zygomatic Regions
11. Filler Injection of the Nasojugal Groove and Palpebromalar Groove
12. Filler Injection of the Nasolabial Fold
13. Filler Injection of the Submalar Triangle
14. Filler Injection of the Nose
15. Filler Injection of the Preauricular Region and the Earlobe
16. Filler Injection of the Lips, Oral Commissure, and Mentolabial Sulcus
17. Filler Injection of the Chin and Mandible Contour
18. Complications and Adverse Effects
19. Risk Areas
This fourth edition of *Bostwick's Plastic and Reconstructive Breast Surgery*, edited by premier breast surgeon Glyn E. Jones, provides just that manual for breast and plastic surgeons. This comprehensive text encompasses every key ingredient for a step-by-step surgical guide to breast surgery:

- An expanded microsurgical section incorporating the most widely used flaps and recent advances
- Extensive coverage of revolutionary prepectoral breast reconstruction, both single stage direct-to-implant approaches and 2-stage expander-implant pre-pectoral reconstruction
- A comprehensive approach to lymphedema surgery
- Exposure to state-of-the-art implant technology
- Contributing authors from around the globe who are heralded as the best in their field at technique and innovation
- Detailed coverage of relevant and groundbreaking new technologies that are redefining plastic surgery of the breast
- Step-by-step detailed technical operative details including technical nuances rarely outlined in surgical texts
- High-quality, updated surgical images and intricate surgical illustrations as well as pertinent radiographic examples
- An extensive collection of pertinent surgical videos, which stream directly from the publisher’s website
- Technical caveats to ensure success of the surgical techniques described
- Concise but thorough chapters presented in both print and electronic formats for easy access by busy surgeons

Surgeons must be highly skilled in cosmetic breast surgery as well as in prepectoral approaches, single-stage direct-to-implant reconstruction, and microsurgery to remain competitive in the plastic and reconstructive breast surgery field. Every dedicated breast surgeon will want this essential text at their fingertips!

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

CONTENTS

Volume I
Part I Basic Principles
1 Anatomy, Physiology, and Aesthetics
2 Breast Aesthetics
3 Oncological Aspects of Nipple-Sparing Mastectomy
4 Oncological Aspects of Breast Reconstruction
5 Gene Mutations and Breast Cancer Risk: Overview and Management
6 Multimodality Imaging in the Interdisciplinary Management of Breast Diseases
7 Technological Advances in Breast Surgery
i. Acellular Dermal Matrices
ii. Biological Matrix Applications in Breast Reconstruction
8 Fat Grafting in Breast Surgery: The Data
9 Fat Grafting to the Breast: Aesthetic and Reconstructive Applications
10 Fat Grafting to the Breast in Prepectoral Breast Reconstruction—A Current Overview

Part II Augmentation Mammaplasty
11 Preoperative Evaluation of the Breast Augmentation Patient
12 Implant Technology
13 Breast Implant-Associated Anaplastic Large Cell Lymphoma
14 Augmentation Mammaplasty with Cohesive Gel Implants
15 Subpectoral Breast Augmentation (Inframammary Approach)
16 Subfascial Inframammary Breast Augmentation
17 Transaxillary Approach to Endoscopic Breast Augmentation
18 Periareolar Breast Augmentation
19 Managing Asymmetry and Congenital Anomalies
20 Managing Complications in Breast Augmentation

Part III Mastopexy
21 Decision Making in Mastopexy
22 Periareolar Mastopexy
23 Vertical Mastopexy
24 The Wise Pattern Mastopexy

Part IV Mastopexy Augmentation
25 Decision Making in Mastopexy Augmentation
26 Periareolar Mastopexy Augmentation
27 Vertical Mastopexy Augmentation
28 The Wise Pattern Mastopexy Augmentation
29 Prevention and Management of Complications in Mastopexy Augmentation

Part V Massive Weight Loss
30 Breast Surgery after Massive Weight Loss

Volume II
Part VI Reduction Mammaplasty
31 Vertical Superior Pedicle Breast Reduction (Modified Lassus Technique)
32 Superomedial Vertical Breast Reduction
33 Superomedial Pedicle Technique with Inverted-T Closure (Wise Pattern)
34 Central Mound Inferior Pedicle Technique
35 Free Nipple Graft Technique
36 Outcomes and Reducing Complications in Breast Reduction
37 Gynecomastia: Evaluation and Treatment

Part VII Non-Microsurgical Breast Reconstruction
38 Decision Making in Breast Reconstruction

Subpart A: Implant-Based Reconstruction
39 Prepectoral Breast Reconstruction: Direct-to-Implant versus Two-stage
40 Two-Stage Subpectoral Tissue Expander–Implant Reconstruction
41 Subpectoral Direct-to-Implant Single-Stage Reconstruction
42 Prepectoral Direct-to-Implant Breast Reconstruction
43 Prepectoral Site Conversion for Animation Deformity
44 Two-Stage Prepectoral Prosthetic Breast Reconstruction
45 Preventing and Managing Complications of Expander–Implant Reconstruction
46 Implant-Based Reconstruction and Radiation

**Subpart B: Latissimus Dorsi Flap Reconstruction**
47 Latissimus Dorsi Flap Anatomy
48 Latissimus Dorsi Flap Reconstruction
49 Preventing and Managing Complications in Latissimus Dorsi Flap Reconstruction

**Subpart C: Pedicled TRAM Flap Reconstruction**
50 Anatomy of the TRAM Flap and Abdominal Donor Site
51 Transverse Rectus Abdominis Musculocutaneous Flaps

**Part VIII Microsurgical Breast Reconstruction**

**Subpart A: DIEP Flap**
52 Preoperative Planning and Imaging of the DIEP Flap
53 DIEP Flap Reconstruction and Technique
54 Prevention and Management of Complications in DIEP Flap Reconstruction

**Subpart B: Muscle-Sparing Free TRAM Flap**
55 Muscle-Sparing Free TRAM Flap Reconstruction

**Subpart C: Superficial Inferior Epigastric Flap**
56 Superficial Inferior Epigastric Artery Perforator Flap

**Subpart D: Thigh-based Free Flaps**
57 Transverse Upper Gracilis Flap
58 Profunda Artery Perforator Flap

**Subpart E: Alternate Perforator Flap Donor Sites**
59 Superior Gluteal Artery Perforator Free Flap
60 Lumbar Artery Perforator Flap

**Part IX Miscellaneous**

**Subpart A: Oncoplastic Breast Conservation Surgery**
61 Principles of Oncoplastic Breast Surgery and Patient Selection
62 Oncoplastic Reconstruction by Tumor Location and Outcomes
63 Managing Complications after Breast Radiation Therapy

**Subpart B: Nipple-Areolar Reconstruction**
64 Nipple-Areolar Reconstruction

**Subpart C: Lymphedema**
65 Surgical Treatment of Lymphedema

**Subpart D: Complex Case Salvage**
66 Salvage of Complex Problems
**EDITOR**

Foad Nahai, MD, is Maurice J. Jurkiewicz Chair in Plastic Surgery and Professor of Surgery, Division of Plastic and Reconstructive Surgery, Department of Surgery, Emory University School of Medicine, Atlanta, Georgia, USA.

Farzad R. Nahai, MD, is a Board-Certified Plastic and Aesthetic Surgeon, The Center for Plastic Surgery at MetroDerm, Atlanta, Georgia, USA.

Jeffrey M. Kenkel, MD, is the Betty and Warren Woodward Chair in Plastic and Reconstructive Surgery and Professor and Chairman, Department of Plastic Surgery, The University of Texas Southwestern Medical Center, Dallas, Texas, USA.

W. Grant Stevens, MD. FACS, is Clinical Professor of Plastic Surgery, University of Southern California, Los Angeles; and Founder and Medical Director, Marina Plastic Surgery, Marina Del Rey, California, USA.

William P. Adams Jr., MD, is Associate Professor and Chief of Plastic Surgery at Parkland Health and Hospital Systems, Department of Plastic Surgery, The University of Texas at Southwestern Medical Center, Dallas, Texas, USA.

John G. Hunter, MD, is Vice Chairman, Department of Surgery and Chief, Division of Plastic Surgery, New York Methodist Hospital; and Clinical Professor of Surgery (Plastic Surgery), Weill Cornell Medical College, New York, New York, USA.

**DESCRIPTION**

The ultimate guide to aesthetic surgery from world famous aesthetic surgeon Foad Nahai

The Art of Aesthetic Surgery, Principles and Techniques, Third Edition by internationally revered aesthetic surgeon Foad Nahai, five distinguished co-editors, and more than 100 new contributors is an encyclopedic, three-volume masterwork. Considered the quintessential resource on cosmetic surgery since its inception, the new edition features an e-book and access to online videos for the first time. The updated text and videos reflect significant and numerous exciting developments in aesthetic medicine and surgery.

An impressive group of renowned global experts contribute valuable insights, pearls, and considerable expertise. Twenty new chapters feature a wealth of diverse state-of-the-art topics, while other chapters have been updated and greatly expanded. New areas of focus include practice management, volume enhancement in periorbital and facial rejuvenation, minimally invasive neck techniques, and body contouring procedures such as umbilicoplasty. Patient safety is prominent, with a major chapter on safety considerations in aesthetic surgery, as well as discussion of complications in different anatomic regions.

**Key Highlights**

- A state-of-the-art review of facial aesthetic surgery, with detailed coverage of all the key techniques needed to achieve facial rejuvenation
- The latest primary and revision breast surgery techniques for augmentation, reduction, mastopexy, fat grafting, and asymmetry management
Significant new chapters on minimally invasive treatments reflect enormous changes in this field since the last edition.
The addition of two new dedicated sections on genital rejuvenation and gender affirming surgery.
About 6,000 beautiful illustrations enhance understanding of state-of-the-art approaches.
An expanded video library featuring 14 new clips and the addition of pre- and post-op patient images provides expert procedural guidance.

This quintessential resource provides trainees and experienced practitioners with a solid foundation for learning basic principles and techniques in aesthetic surgery, with the ultimate goal of improving patient outcomes, developing innovations, and advancing the specialty.

CONTENTS

VOLUME I

Part I Fundamentals
1 The Patient
2 Psychological Considerations in Aesthetic Surgery
3 Photographic Essentials in Aesthetic Surgery
4 Patient Safety in Aesthetic Surgery
5 Sedation and Anesthesia for Aesthetic Surgery

Part II Business Basics
6 Why Offer Aesthetic Medicine in an Aesthetic Surgical Practice?
7 Optimal Correction and Patient Retention: A Personal Philosophical and Practical Approach to Your Nonsurgical Practice
8 The Spa and the Law
9 Social Media
10 Hiring and Training a Superstar Patient-Care Coordinator
11 Evidence-Based Pricing Strategies That Work

Part III Nonsurgical Cosmetic Treatments
12 Clinical Decision Making for Nonsurgical Cosmetic Treatments
13 Over-the-Counter Skin Care and Nutraceutical Basics for the Aesthetic Surgeon
14 A Scientific Approach to Cosmeceuticals
15 Botulinum Toxin Injection for Facial Rejuvenation
16 Soft-Tissue Fillers
17 Non-Light-Based Skin Resurfacing
18 Chemical Peels
19 Lasers and Light-Based Devices in Plastic Surgery
20 Sclerotherapy and Laser Vein Treatment
21 Nonsurgical Treatment of the Face and Neck

Part IV Hair Transplantation
22 Applied Anatomy in Hair Transplantation
23 Clinical Decision Making in Hair Transplantation
24 Hair Transplantation: Follicular Unit Micrografting and Minigrafting—Current Techniques and Future Directions
25 Reoperation, Refinement, and Treatment of Complications after Hair Transplantation

Part V Brow Lift
26 Clinical Decision Making in Brow Lift: Brow Rejuvenation
27 Temporal Brow Lift
28 Endoscopic Brow Lift
29 Endoscopic Brow Lift: My Personal Approach
30 Other Approaches to Brow Lift

Part VI Eyelid Surgery
31 Eyelid and Periorbital Anatomy
32 Clinical Decision Making in Aesthetic Eyelid Surgery
33 Upper Eyelid Blepharoplasty
34 Upper Blepharoplasty in the Asian Patient
35 Ptosis Surgery in the Blepharoplasty Patient
36 Lower Eyelid Blepharoplasty
37 Transconjunctival Blepharoplasty
38 The Lower Eyelid Pinch Blepharoplasty
39 Avoidance and Treatment of Complications of Aesthetic Eyelid Surgery

VOLUME II
Part VII Midface Rejuvenation
40 Clinical Decision Making in the Midface
41 Midface Recontouring
42 Endoscopic Rejuvenation of the Midface

Part VIII Surgical Rejuvenation of the Face and Neck
43 Clinical Anatomy of the Face and Neck: Visualizing the Face
44 Clinical Decision Making in Facelift and Neck Lift
45 Structural Fat Grafting: Basics and Clinical Applications in the Hand and Face
46 The MACS Lift Short-Scar Rhytidectomy with Fat Grafting
47 Short-Scar Rhytidectomy
48 Extended SMAS Technique in Facial Rejuvenation
49 Lamellar High-SMAS Facelift: Single-Flap Lifting of the Midface, Cheek, and Jawline
50 Simultaneous Facelift and Facial Fat Grafting
51 Facial Implant Augmentation
52 Neck Lift
53 Secondary Neck Lift
54 Reoperative Rhytidectomy
55 Avoidance and Management of Complications in Facial Aesthetic Surgery

Part IX Rejuvenation of the Cheeks, Chin, Lips, and Ears
56 Rejuvenation of the Aging Mouth
57 Refinements in Otoplasty Techniques
58 Rejuvenation of the Chin

Part X Rhinoplasty
59 Applied Anatomy of the Nose
60 Clinical Decision Making in Rhinoplasty
61 Primary Rhinoplasty
62 Tip Grafting for Nasal Contouring
63 Asian Rhinoplasty
64 Ethnic Rhinoplasty
65 Revision Rhinoplasty

VOLUME III
Part XI Breast Surgery
66 Applied Anatomy of the Breast
67 The Process of Breast Augmentation: Optimizing Clinical Decisions and Outcomes in Breast Augmentation
68 Choosing the Right Breast Implant
69 Breast Augmentation
70 Fat Grafting of the Breast
71 Composite Primary and Revision Breast Augmentation
72 Capsular Contracture: Current Science, Prevention, and Management
73 Primary and Revision Augmentation Mastopexy: Techniques and Considerations
74 Clinical Decision Making in Breast Reduction and Mastopexy
75 Medial Pedicle Vertical Breast Reduction
76 Breast Reduction: The Lateral Pedicle Technique
77 Short-Scar Mammoplasty with a Pectoralis Loop
78 Alternative Approaches to Breast Reduction
79 Control and Precision in Mastopexy
80 Mastopexy and Breast Reduction in Massive-Weight-Loss Patients
81 Management of Breast Asymmetry
82 Treatment of Gynecomastia

Part XII Body Contouring
83 Applied Anatomy in Body Contouring
84 Clinical Decision Making in Body Contouring
85 Noninvasive and Minimally Invasive Techniques for Body Contouring
86 Liposuction and High Definition Liposculpture: Basic Techniques and Safety Considerations
87 Screening and Safety Issues in the Massive-Weight-Loss Patient
88 Brachioplasty
89 Decision Making in Upper Back Contouring
90 Body Lift
91 Abdominoplasty
92 Gluteal Augmentation With Fat Transfer
93 Evaluation and Treatment of Iatrogenic Deformities, Including Contour Deformities
94 Aesthetic Abdominal Surgery in Men: BodyBanking with Autologous Fat Contouring and Silicone Six Pack Implant Augmentation
95 Male Massive-Weight-Loss Chest Excision
96 Thighplasty

Part XIII Female Genital Rejuvenation
97 Applied Anatomy in Female Genital Rejuvenation
98 Clinical Decision Making in Female Genital Rejuvenation
99 Surgical and Nonsurgical Female Genital Rejuvenation: Patient Selection, Preoperative Considerations, Psychological Considerations, and Patient Satisfaction: Part 1—Patient Selection and Preoperative Considerations
100 Surgical and Nonsurgical Female Genital Rejuvenation: Patient Selection, Preoperative Considerations, Psychological Considerations, and Patient Satisfaction: Part 2—Psychological Considerations and Patient Satisfaction
101 Surgical Alteration of the Labia Minora and Clitoral Hood: Part 1—Labia Minora Reduction Surgery Using Edge Excision Techniques and Non-Wedge Flap Techniques
102 Surgical Alteration of the Labia Minora and Clitoral Hood: Part 2—Central Wedge Labiaplasty and Clitoral Hood Reduction
103 Surgical Alteration of the Labia Minora and Clitoral Hood: Part 3—Surgical Alteration of the Clitoral Hood
104 Surgical Alterations of the Labia Majora and Mons Pubis
105 Vaginal Rejuvenation and Perineoplasty, Surgical Alteration and Minimally Invasive Procedures: Part 1—Vaginal Rejuvenation and Perineoplasty, Surgical Procedures
106 Vaginal Rejuvenation and Perineoplasty, Surgical Alteration and Minimally Invasive Procedures: Part 2—Vaginal Tightening, Surgical and Nonsurgical Options
107 Labiaplasty and Hood Reduction Complication Avoidance and Treatment
108 Female Genital Rejuvenation: Labia Minora Revision Surgery

Part XIV Gender-Affirming Surgery
109 Clinical Decision Making for Gender-Affirming Surgery
110 Gender-Affirming Surgery: Patient Selection and Preoperative Considerations
111 Gender-Affirming Surgery: Facial Surgery
Anatomy for Dental Medicine, Third Edition

**EDITORS**

Eric W. Baker, MA, MPhil, Department of Basic Science and Craniofacial Biology, New York University College of Dentistry, New York, New York.

Elisabeth K. N. Lopez, PhD, Department of Basic Science and Craniofacial Biology, New York University College of Dentistry, New York, New York.

**DESCRIPTION**

*A visually-rich and clinically relevant anatomy resource for dental students*

*Anatomy for Dental Medicine, Third Edition* strikes an optimal balance between systemic and regional approaches to complex head and neck anatomy. Award-winning full-color illustrations, succinct text, summary tables, and questions put anatomical structures and knowledge into a practical context.

### Key Features

- NEW! Additional radiologic images and landmark features throughout
- NEW! Reorganized brain/nerve sections
- NEW! Expanded clinical question appendix including patient box questions in the style of the INBDE
- NEW! Factual question appendix places greater emphasis on areas including the skull, larynx, cross sectional anatomy, body below the neck, and local anesthesia

Also included in this new edition:

- 1,200 clear and detailed full-color illustrations
- 150 tables for rapid access to key information
- Expanded captions detail key information and clinical correlations
- Appendix covering anatomy for local anesthesia
- Online images with “labels-on and labels-off” capability are ideal for review and self-testing

This is an essential resource for dental students and residents that also provides a robust review for the boards or dissection courses.

*What users say about the Atlas of Anatomy:*

"...I am impressed with the 2nd edition of the atlas because it provides multiple, complimentary paths to learning head and neck anatomy."
“...organization is in an effective sequence that walks the learner through the anatomy in a layered, step-wise manner.”

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

MEDIA CONTENT | Complimentary MedOne eBook and Media

SPECIALTY | Anatomy

LEVEL | Medical and PT students, other students learning anatomy

EDITORS
Anne M. Gilroy, MA, is Professor Emeritus, Department of Radiology, University of Massachusetts Medical School, Worcester, Massachusetts.
Brian R. MacPherson, PhD, is Professor and Vice Chair, Department of Neuroscience, University of Kentucky College of Medicine, Lexington, Kentucky.
Jamie C. Wikenheiser, PhD, is Associate Professor, Department of Anatomy and Neurobiology, UC Irvine School of Medicine, Irvine, California.

DESCRIPTION
Quintessential Atlas of Anatomy expands on widely acclaimed prior editions!

Atlas of Anatomy, Fourth Edition builds on its longstanding reputation of being the highest quality anatomy atlas published to date. With more than 2,000 exquisitely detailed illustrations, including over 120 new to this edition, the Atlas helps students and seasoned clinicians master the details of human anatomy.

Key Features:
- NEW! Expanded Radiology sections include over 40 new radiographs, CTs, and MRIs
- NEW! A more dissectional approach to the head and neck region places neck anatomy before that of the head – the way most students dissect
- NEW! Additional images and tables detail the challenging anatomy of the peritoneal cavity, inguinal region, and infratemporal and pterygopalatine fossae
- NEW! Almost 30 new clinical boxes focus on function, pathology, diagnostic techniques, anatomic variation, and more
- NEW! More comprehensive coverage clarifies the complexities of the ANS, including revised wiring schematics
- Also included in this new edition:
  - Muscle Fact spreads provide origin, insertion, innervation, and action
  - An innovative, user-friendly format: every topic covered in two side-by-side pages
  - Online images with “labels-on and labels-off” capability are ideal for review and self-testing

What users say about the Atlas of Anatomy:

“I can’t say enough how much I like the organization of this text. I think Thieme has ‘hit the nail on the head’ with structuring everything by region (Lower Limb) and sub-region (Ankle & Foot). It’s very easy to find what you’re looking for...”
"The figures in the Atlas of Anatomy are exemplary and surpass other competing texts. The images are clear, precise, and aesthetically colored. The unique views presented in this work are also very helpful for studying a three-dimensional subject such as human anatomy."

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**EDITORS**
Douglas S. Steinbrech, MD, FACS, is the Founder of the New York Institute of Male Plastic Surgery; and Founding Partner/Plastic Surgeon, Gotham Plastic Surgery, New York, New York, USA.

**DESCRIPTION**
The quintessential book on the rapidly expanding field of male aesthetic surgery from renowned experts!

During the past decade, there has been an exponential increase in the number of men undergoing aesthetic surgery in the U.S., with an estimated 1.3 million procedures performed annually. Male Aesthetic Plastic Surgery by Douglas Steinbrech reflects expertise and insights from one of the most-sought-after pioneers in male surgery, along with a Who's Who of contributing authors. While many texts have been written on female aesthetic surgery, this generously illustrated resource fills a void in the literature.

Divided into four sections and 45 chapters, the book reflects the background history and male-centric perspective that sets male aesthetic surgery apart from its female counterpart. Essential steps are detailed for each procedure including the physical exam, anatomical variations, patient selection, preoperative preparations, postoperative care, and invaluable pearls and pitfalls to maximize results and avoid complications. Of special interest, each chapter features bullet steps for quick and easy reference before entering the OR. From innovative, never-before published techniques, such as a sub-fascial abdominal silicone six-pack to the rapidly changing world of male body contouring, the textbook covers a broad range of cutting-edge and emerging techniques.

- High quality illustrations, bulleted text, and superb videos enhance the ability to understand and perform each procedure
- A full spectrum of facial approaches including male blepharoplasty, facelift in men, chin augmentation, facial fat grafting, cheek shaping, male rhinoplasty, and hair restoration
- State-of-the-art body techniques including diverse methods to correct gynecomastia, high abdominal definition, gluteal sculpting, abdominal contouring, chest sculpting, and muscular augmentation with implants
- The latest injectable, laser, and men's skincare procedures, including the use of neurotoxins, Kybella, and energy-based techniques
- A comprehensive glossary of surgical terms provides a quick reference for daily practice

This is a must-have resource for all plastic surgeons, dermatologic surgeons, and aesthetic doctors who treat male patients.

**EDITORS**

Paul E. Kaloostian, MD, FAANS, FACS, is Assistant Professor of Neurosurgery, University of California, Riverside School of Medicine, Riverside, California, USA.

Christ Ordookhanian, BS, is MD Candidate, University of California, Riverside School of Medicine, Riverside, California, USA.

**DESCRIPTION**

*Pocket-size, user-friendly roadmap outlines most common surgical procedures in neurosurgery!*

Surgery requires a combination of knowledge and skill acquired through years of direct observation, mentorship, and practice. The learning curve can be steep, frustrating, and intimidating for many medical students and junior residents. Too often, books and texts that attempt to translate the art of surgery are far too comprehensive for this audience and counterproductive to learning important basic skills to succeed. *Neurosurgery Outlines* by neurosurgeon Paul E. Kaloostian is the neuro-surgical volume in the *Surgical Outlines* series of textbooks that offer a simplified roadmap to surgery.

This unique resource outlines key steps for common surgeries, laying a solid foundation of basic knowledge from which trainees can easily build and expand. The text serves as a starting point for learning neurosurgical techniques, with room for adding notes, details, and pearls collected during the journey. The chapters are systematically organized and formatted by subspecialty, encompassing spine, radiosurgery, brain tumors and vascular lesions, head trauma, functional neurosurgery, epilepsy, pain, and hydrocephalus. Each chapter includes symptoms and signs, surgical pathology, diagnostic modalities, differential diagnosis, treatment options, indications for surgical intervention, step-by-step procedures, pitfalls, prognosis, and references where applicable.

**Key Features**

- Provides quick procedural outlines essential for understanding procedures and assisting attending neurosurgeons during rounds
- Spine procedures organized by cervical, thoracic, lumbar, sacral, and coccyx regions cover traumatic, elective, and tumor/vascular-related interventions
- Cranial topics include lesion resection for brain tumors and cerebrovascular disease and TBI treatment

This is an ideal, easy-to-read resource for medical students and junior residents to utilize during the one-month neurosurgery rotations and for quick consultation during the early years of neurosurgical practice. It will also benefit operating room nurses who need a quick guide on core neurosurgical procedures.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

Incidental Findings in Neuroimaging and Their Management: A Guide for Radiologists, Neurosurgeons, and Neurologists presents a streamlined, case-based approach to 50 commonly seen incidental findings in neuroimaging. Edited by Kaye Westmark, Dong Kim, and Roy Riascos, this unique book provides the necessary knowledge to manage significant unexpected findings—from identification and analysis to efficacious interventions. With collaborative contributions from neuroradiologists, neurosurgeons, neurologists, otolaryngologists, body and musculoskeletal imaging experts, endocrinologists and hematologists/oncologists, this resource encompasses a wide spectrum of incidental findings.

Organized by six sections, the book starts with normal variants that are extremely important to recognize in order to avoid unwarranted additional testing and unnecessary stress for the patient. Subsequent sections detail abnormalities that require extensive clinical evaluation in order to determine ideal management. These include incidental findings for extracranial, extra-spinal, intracranial, and intraspinal imaging. The final section outlines CT and MR imaging artifacts that are particularly concerning because they may mimic more dangerous pathologies while degrading imaging quality and obscuring real findings.

Key Features

- Key findings and differential diagnosis are listed for each entity
- Diagnostic decision trees present algorithms in an easy-to-understand manner
- Artifact analyses explain the technical reason for each artifact and what can be done to mitigate effects
• Clinical Q&As connect the radiologic diagnosis with actual case management decisions and provide in-depth background information that is applicable to management in various scenarios

This essential guide will help trainee and practicing neuroradiologists, neurosurgeons, and neurologists interpret incidental spine and brain imaging findings and make clinically informed, complex treatment decisions.

CONTENTS

**Section I Normal Variants**
1. Persistent Primitive Trigeminal Artery
2. Arachnoid Granulations
3. Asymmetry of the Lateral Ventricles
4. Basal Ganglia/Dentate Nuclei Mineralization
5. Cavum Septum Pellucidum
6. Choroid Fissure Cyst
7. Empty Sella Configuration
8. High-Riding Jugular Bulb
9. Hyperostosis Frontalis Interna
10. Prominent Perivascular Space
11. Simple Pineal Cyst

**Section II Intracranial Incidental Findings**
12. Diffuse White Matter Hyperintensities
13. Brain Capillary Telangiectasias
14. Developmental Venous Anomaly
15. Cerebral Cavernous Malformations
16. Colloid Cyst
17. Arachnoid Cysts
18. Mega Cisterna Magna
19. Benign Enlargement of Subarachnoid Spaces
20. Pituitary Incidentaloma and Incidental Silent Macroadenoma
21. Pituitary Gland: Diffuse Enlargement
22. Incidental Glial Neoplasms
23. Incidental Meningioma

**Section III Head and Neck–Associated Incidental Findings**
24. Head and Neck–Related Incidental Findings

**Section IV Spinal Incidental Findings**
25. Os Odontoideum
26. Tarlov’s Cyst
27. Approach to the Solitary Vertebral Lesion on Magnetic Resonance Imaging
28. Diffusely Abnormal Marrow Signal within the Vertebrae on MRI
29. Filum Terminale Lipoma
30. Ventriculus Terminalis
31. Prominent Central Canal
32. Low-Lying Conus
33. Incidental Solitary Sclerotic Bone Lesion

**Section V Extraspinal Incidental Findings**
34. Abdominal Aortic Aneurysm
35. Renal Mass
36. Renal Cyst
37. Thyroid Mass
38. Adrenal Mass
39. Retroperitoneal Lymph Nodes
40. Incidental Pelvic Mass

Section VI Artifacts That May Obscure Pathology and Simulate Disease Entities
41. Computed Tomography Artifacts
42. MRI Patient-Related Motion Artifacts
43. Magnetic Susceptibility–Related Artifacts on MRI
44. MRI Technical and Sequence-Specific Artifacts
The definitive state-of-the-art resource on pediatric endoscopic endonasal approaches

Today, expanded endonasal approaches (EEA) have revolutionized the surgical treatment paradigm for pediatric central skull base lesions. Specially adapted micro-instruments have been developed to permit passage through the narrow sinonasal pathways in children, enabling access to the entire midline skull base, from the crista galli to the cervico-medullary junction.

Pediatric Endoscopic Endonasal Skull Base Surgery by Harminder Singh, Jeffrey Greenfield, Vijay Anand, and Theodore Schwartz is the first textbook focused solely on endoscopic endonasal management of cranial base pathologies in children. The book reflects in-depth expertise from an extraordinary group of international contributors from five continents, who share extensive knowledge on this emerging field. Thirty chapters are presented in three comprehensive sections.

Key Features

- Core topics including anatomy, rhinological and anesthetic considerations, patient positioning and OR set-up, instrumentation, and endonasal corridors and approaches
- Fifteen chapters detail endoscopic treatment of a full spectrum of pediatric pathologies, such as craniopharyngioma, meningoencephalocele, basilar invagination, and benign and malignant tumors, among others
- Discussion of multiple skull-base closure techniques, managing complications, and neurosurgical and otolaryngological postoperative care
• Visually rich, the succinct text is enhanced with more than 200 high-quality surgical illustrations and intraoperative photographs, as well as procedural videos

This unique reference is essential reading for neurosurgical and otolaryngology residents and fellows, as well as veteran surgeons, nurse-practitioners, and physician-assistants who treat and care for pediatric patients with skull-base conditions.

COMPETITION
There is no direct competition, only chapters within pediatric or skull base books.

CONTENTS

Part I Pediatric Anatomy, Approaches, and Surgical Considerations
1 Anatomy of the Developing Pediatric Skull Base
2 Pediatric Rhinologic Considerations
3 Anesthetic Considerations in Pediatric Patients
4 Patient Positioning and Operating Room Setup
5 Instrumentation
6 Intraoperative Neurophysiological Monitoring during Endoscopic Endonasal Skull Base Surgery
7 Endonasal Corridors and Approaches
8 Combined Transcranial and Endonasal Approaches
9 Transorbital and Multiportal Approaches
10 Endonasal versus Supraorbital Eyebrow Approaches: Decision-Making in the Pediatric Population
11 Ventral Approaches to Intraparenchymal Tumors of the Skull Base and Brainstem

Part II Pathology Specific to the Pediatric Skull Base
12 Meningoencephaloceles
13 Sellar Arachnoid Cysts
14 Odontoidectomy for Craniovertebral Junction Compression
15 Rathke's Cleft Cyst
16 Craniofaryngioma
17 Pituitary Adenomas: Functional
18 Pituitary Adenoma: Nonfunctional
19 Epidermoid and Dermoid Tumors
20 Juvenile Nasopharyngeal Angiofibroma
21 Optic Pathway Glioma and Juvenile Pilocytic Astrocytoma
22 Germ Cell Tumors
23 Chordoma
24 Chondrosarcomas
25 Malignant Skull Base Tumors
26 Subperiosteal Orbital Abscess

Part III Skull Base Closure, Complication Management, and Postoperative Care
27 Closure Techniques for the Pediatric Skull Base: Vascularized Flaps
28 Closure Techniques for the Pediatric Skull Base: Multilayer Closure
29 Closure Techniques for the Pediatric Skull Base: Gasket Seal
30 Closure Techniques for the Pediatric Skull Base: Bilayer Button
31 Closure Techniques for the Pediatric Skull Base: Lumbar Drains
32 Complication Management in Pediatric Endonasal Skull Base Surgery
33 Postoperative Care for Pediatric Skull Base Patients: The Neurosurgery Perspective
34 Postoperative Care for Pediatric Skull Base Patients: The Otolaryngology Perspective
Unique resource provides spine surgeons with the right tools and mindset to perform minimally invasive surgery

Minimally Invasive Spine Surgery: A Primer by Luis Manuel Tumialán is the ideal introduction to minimally invasive spine approaches, especially for neurosurgery and orthopedic residents, fellows, and spine surgeons who want to incorporate minimally invasive approaches into their practice. The Primer offers a treasure trove of 3D illustrations and animations that virtually brings the aspiring minimally invasive spine surgeon into the operating room alongside their professor. The text starts with a discussion of open spine surgery versus minimally invasive procedures and the optimal mindset required to convert from one to the other.

The book is divided into lumbar, cervical, and thoracic spine sections, and a fourth section dedicated to the fundamentals of fluoroscopy and radiation exposure. The text begins with an overview, history, and evolution of each procedure, followed by a discussion of the anatomical basis for using a minimally invasive approach. Each anatomical section starts with the least complicated surgeries, thereby laying the foundation for more complex procedures discussed in subsequent chapters. The third section focuses on thoracic decompression, nerve sheath tumors in the lumbar and thoracic spine, and management of metastatic disease and intradural extramedullary lesions.

Key Features

- Single-authored text provides uniform readability and philosophy—cover to cover
- Lumbar approaches include microdiscectomy, laminectomy, transforaminal interbody fusions, and the transpsoas approach
- Cervical procedures encompass posterior foraminotomy, laminectomy, and anterior discectomy
- Superb illustrations, high-fidelity anatomical animations based on computer modeling, and procedural videos enhance understanding of minimally invasive spine principles

This unique, single-author Primer is a must-have resource for early-career spine surgeons who wish to learn minimally invasive principles, as well as veteran surgeons who have a desire to incorporate minimally invasive spine surgery into clinical practice.

CONTENTS

Chapter 1: A Minimally Invasive Perspective: The Conversion
Chapter 2: The Minimally Invasive Microdiscectomy
Chapter 3: Minimally Invasive Lumbar Laminectomy
Chapter 4: Minimally Invasive Transforaminal Lumbar Interbody Fusion
Chapter 5: Minimally Invasive Far Lateral Microdiscectomy
Chapter 6: Transpsoas Lumbar Interbody Fusion
Chapter 7: Minimally Invasive Posterior Cervical Foraminotomy
Chapter 8: Minimally Invasive Posterior Cervical Laminectomy
Chapter 9: Anterior Cervical Discectomy with Arthroplasty or Fusion
Chapter 10: Minimally Invasive Decompressions for Metastatic Spinal Disease
Chapter 11: Minimally Invasive Resection of Intradural Extramedullary Lesions within the Thoracic Spine
Chapter 12: Radiation and Minimally Invasive Spine Surgery
Chapter 13: Minimizing Ionizing Radiation in Minimally Invasive Spine Surgery
**DESCRIPTION**

*An informative, go-to guide on common plastic surgery principles and practices*

*Plastic Surgery: A Practical Guide to Operative Care* by Bruce Mast fills the gap between existing pocket handbooks and encyclopedic library shelf editions. The book is geared towards plastic surgeons early in their careers. The focus is on commonly encountered conditions and is not intended to be an all-inclusive resource. All the surgical chapters are uniformly organized, with discussion of goals and objectives, patient presentation, surgery preparation, treatment, postoperative care, outcomes, and questions.

The book is divided into eight sections, starting with science and principles which discusses impacted anatomy and different techniques such as grafts, flaps, microsurgery, lasers, and radiant energy. Subsequent sections cover skin and tissue conditions; pediatric plastic surgery; reconstructive and aesthetic craniofacial techniques; hand and upper extremity reconstruction; breast surgery inclusive of augmentation, mastopexy, reduction, reconstruction, and oncoplastic approaches; chest, trunk, and lower extremity reconstruction; and body contouring techniques including liposuction, abdominoplasty, and lower body lift.

**Key Features**

- Five post-reading questions at the end of every chapter provide readers the opportunity to think about what they read, thereby improving retention of newly acquired knowledge
- CME-type presentation formatting provides a robust learning and teaching tool
- More than 400 high quality illustrations enhance understanding of impacted anatomy and techniques

Highly practical, this is an essential surgical companion for medical students to consult during plastic surgery rotations and plastic surgery residents throughout residency. Plastic surgeons in the first five years of practice will also benefit from this user-friendly refresher.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**EDITOR**

Matthew M. Hanasono, MD, FACS, is Professor and Reconstructive Microsurgery Fellowship Program Director, Department of Plastic Surgery, The University of Texas MD Anderson Cancer Center.

Charles E. Butler, MD, FACS, is Chairman and Professor of Plastic Surgery, Department of Plastic Surgery, and the Charles B. Barker Endowed Chair in Surgery, The University of Texas MD Anderson Cancer Center.

**DESCRIPTION**

*The definitive resource on surgical flaps from renowned MD Anderson plastic surgeons*

*Handbook of Reconstructive Flaps* by Matthew Hanasono and Charles Butler reflects contributions from clinicians associated with the prestigious MD Anderson Cancer Center. The institution is internationally recognized as one of the world's premier reconstructive centers and renowned for its Reconstructive Microsurgery fellowship program. This unique resource provides a comprehensive review of microvascular surgery techniques using the most common reconstructive pedicle flaps, free flaps, perforator flaps, and workhorse flaps.

Seven parts organized anatomically detail flaps used for the head/neck, chest, back, abdomen, pelvis, upper extremity, and lower extremity, followed by an eighth part on lymphedema. Each flap or procedure includes pertinent anatomy, indications for usage, preoperative considerations, a concise step-by-step description of the operative setup, the actual procedure, and donor site closure.

**Key Features**

- A Pearls and Pitfalls section in each chapter outlines key concepts and critical nuances in surgical techniques or patient management
- More than 200 clear diagrams, line drawings, and illustrative surgical photos enhance understanding of high impact points
- High quality videos posted online elucidate flap techniques
- A section dedicated to the microsurgical treatment of lymphedema covers lymphovenous bypass, vascularized lymph node transfers from the groin and supraclavicular region, and lymphovenous anastomosis

This is an essential, user-friendly backpack reference for plastic surgery residents to use during rounds and as a board prep. It is also an excellent resource for plastic surgeons new to clinical practice and veteran practitioners as a refresher on unfamiliar flaps.

The quintessential guide to state-of-the-art cosmetic breast surgery from international masters

Cosmetic Breast Surgery by internationally recognized plastic surgeons Sameer Patel, C. Bob Basu, and esteemed colleagues presents the latest augmentation, lift, reduction, and revision surgery techniques. From dedicated chapters focused on the management and correction of undesirable results to expert perspectives on male aesthetics, this remarkable book provides a one-stop resource on cosmetic breast procedures. Every chapter includes technical pearls and methodologies to help surgeons master approaches and achieve optimal patient outcomes.

Organized by six sections, the book starts with a discussion of breast anatomy, followed by a breast augmentation section that serves as a primer on breast implants, from selection to fat grafting. Section three covers management of the ptotic breast, including topics such as mastopexy, a novel internal bra technique, and reduction mammoplasty. Section four details important revision issues, such as managing acute complications and anaplastic large cell lymphoma linked to breast implants. Section five is devoted to male breast procedures, while section six includes chapters on congenital breast deformities, transgender breast surgery, and practice management issues.

Key Highlights

- A contemporary update on capsular contracture and biofilms with evidence-based insights on prevention and treatment
- Pearls on managing and mitigating risk and complications in aesthetic breast surgery
- How to market a cosmetic breast surgery practice in an ever-evolving digital ecosystem
- Nearly 300 illustrations enhance understanding of techniques

Comprehensive and diverse, this is a must-have reference for plastic surgery residents, fellows, and early-career aesthetic plastic surgeons. It will also benefit senior surgeons who wish to expand their surgical repertoire.

CONTENTS

Section 1 Anatomy of the Breast
1 Anatomy of the Breast

Section 2 Primary Breast Augmentation
2 Made to Match: The Essence of Breast Implant Selection - Matching the Implant to the Patient
3 Implant Options
4 Selection of the Surgical Approach
5 Implant Placement Options
6 Fat grafting for Primary Augmentation

Section 3 Management of the Ptotic Breast
7 Preoperative Evaluation of Patients with Macromastia and Ptosis
8 Mastopexy Techniques – Basic Principles
9 Augmentation and Mastopexy – Basic Principles to Develop a Treatment Plan and Technical Pearls
10 Management of the Massive Weight Loss Breast
11 Internal Bra Technique in the Breast with Poor Soft Tissue Support
12 Reduction Mammaplasty

Section 4 Management of the Undesirable Result and Revisional Breast Surgery
13 Management of Acute Complications of Aesthetic Breast Surgery – Part I: Local and Systemic Complications Including Hematoma/Seroma, Surgical Site Infections, Fat Necrosis, Delayed Wound Healing, Pneumothorax, and Venous Thromboembolism
14 Management of Acute Complications of Aesthetic Breast Surgery – Part II: Implant Malposition, Synmastia, Inframammary Fold Modification, and Implant Rippling
15 Capsular Contracture and Biofilms: Etiology, Prevention, and Treatment
16 Breast Implant Associated Anaplastic Large Cell Lymphoma
17 Managing and Mitigating Risk in Aesthetic Breast Surgery

Section 5 Male Breast Aesthetics
18 Evaluation and Surgical Management of Gynecomastia
19 Aesthetics of the Male Breast

Section 6 Other Aesthetic Breast Surgery Topics
20 Evaluation and Treatment of Congenital Breast Deformities
21 Transgender Breast Surgery
22 Nipple Areolar Procedures and Aesthetics
23 Marketing a Cosmetic Breast Practice Through Social Media Outlets
The ultimate guide to managing the multifaceted business aspects of a dermatology practice

Although board-certified dermatologists provide the best care for their patients, managing a practice and optimizing every facet of the business is a daunting endeavor. Business acumen is not taught in residency and is the most overlooked aspect of any given practice. The Business of Dermatology, written by esteemed dermatologists Jeffrey S. Dover, Kavita Mariwalla, and an impressive group of experts, provides a rare opportunity to learn about the operations side of practices across the country. Written in an informal tone, this unique book enables readers to be privy to a "40-way chat" with dermatologists whose practices are flourishing.

With a vast wealth of information relevant to the business side of a dermatology practice, this remarkable resource fills the gap between the training phase and acquisition of professional confidence. Fifty-five chapters offer insightful, highly practical pearls for everyone—from early-career dermatologists and those in solo-practice to employed physicians in large groups. Even the most seasoned practitioners will benefit from firsthand knowledge and real-world tips shared by physicians who have made their own mistakes trying to get practices off the ground and maintain them.

Key Features

- Written by top dermatologists from the perspective of "if we knew then what we know now..."
- Organized in a format and style conducive to easy reading, with practical tips to implement immediately
- Covers all practice-relevant topics, including office space and equipment, managing financials, diverse practice models, human resources, employment considerations, patient issues, pricing, essential surgical tools/supplies, marketing, and much more
- Top ten lists in each chapter highlighting the key take-home points

The Business of Dermatology is an indispensable, one-stop source for all trainee and practicing dermatologists who need insightful guidance on setting up, organizing, managing, or optimizing their practice.

### CONTENTS

**Section I Bricks and Mortar**
- 1 To Rent or to Buy: That is the Question
- 2 Location
- 3 How Much Space Do I Need?
- 4 Creating a Business Plan
- 5 Room Layout
- 6 Office Flow
- 7 Creating a Practice Ambiance
- 8 Photography and Space Requirements for Everyday and Clinical Trials
- 9 Corporate Structure: Limited Liability and Taxation
- 10 Academic versus Private Practice
- 11 Managing the Telecom and IT of Your Business: The Central Nervous System of a Medical Practice
- 12 Choosing and Implementing an Electronic Medical Record System
- 13 Private Equity and Venture Capital-Backed Practice Models

**Section II Human Resources**
- 14 Essential Components of an Employee Manual
- 15 Vision and Mission Statement
- 16 Employees versus Independent Contractors
- 17 Salaried versus Hourly Wage: Which is Better and for What Positions?
- 18 The Practice Administrator
- 19 A Primer on Employment Law for Dermatology Practices
- 20 Essential Policies
- 21 Questions to Ask When Bringing on a Physician
- 22 Designing Your Cosmetic Dermatology Practice for Maximum Efficiency: A Case Study

**Section III Patient Relations**
- 23 'It Depends': No-show Fees, Cancellation Policies, and Deposits for Procedures
- 24 Reminder Calls/Texts: Implementing an Effective Appointment Reminder System
- 25 Is There a Better Way to Answer Calls?
- 26 Critical Components of Consents and Documentation
- 27 Patient Portals and Communication in the Age of EMR
- 28 Teledermatology Ground Rules
- 29 Risk Management

**Section IV The Daily Grind**
- 30 The Ideal Schedule
- 31 Delegating: Physician Extenders and Integration into a Practice
- 32 Managing Expectations of Staff
- 33 Pricing Cosmetic Procedures
- 34 Integrating Cosmeceuticals into Daily Practice
- 35 Building a Budget/Calculating Overhead
- 36 Evaluating Pharmacies and Patient Coupons
- 37 Deciding What Services to Provide
- 38 Evaluating a Laser for Purchase and Calculating a Return on Investment for a Device
- 39 Evaluating Costs of Fillers and Toxins: Brand Loyalty versus Offering Everything

**Section V The Nitty-Gritty**
- 40 Essential Instruments
- 41 Essential Stock to Start a Practice
- 42 Essential Stock for Cosmetic Procedures: How to Determine What to Carry, and Control Inventory and Costs
- 43 What Devices Does Your Practice Need?
- 44 Loyalty and VIP Programs
Section VI Your Image
45 The Most Important Components of a Successful Website
46 Social Media
47 Creating and Nurturing a Brand/Logo
48 Managing Your Online Reputation
49 Tips for the Media
50 Marketing and Advertising Your Dermatology Practice

Section VII Miscellaneous
51 Growing Your Practice
52 Mohs: Outsource or Keep In-House
53 The Ground Rules of Teaching in a Private Practice
54 Staying Active Nationally in the Years after Residency
55 Getting Involved in Advocacy
**Editors**

Stephen Thomas, MD, is Associate Professor of Radiology, Section of Abdominal Imaging, The University of Chicago, Chicago, Illinois, USA.

Jonathan M. Lorenz, MD, FSIR, is Professor of Radiology, Section of Interventional Radiology, The University of Chicago, Chicago, Illinois, USA.

**Description**

**Essential gastroenterology cases and board-type Q&A review to help you pass your exam!**

*RadCases Gastrointestinal Imaging Second Edition* by Stephen Thomas and Jonathan Lorenz expands on the rich study experience that has been tried, tested, and popularized by radiology residents around the world. The new edition includes important variations on prior cases, updated diagnostic and management strategies, and new pathological entities. One hundred new, carefully selected GI cases are focused on helping radiology residents navigate and assimilate a daunting volume of digestive-related information. For maximum ease of self-assessment, each case begins with the clinical presentation on the right-hand page; study that and then turn the page for imaging findings, differential diagnoses with the definitive diagnosis, essential facts, pearls and pitfalls, and more.

**Key Highlights**

- More than 550 high-resolution multimodality images, including computed tomography, MRI, fluoroscopic studies, positron emission tomography, and ultrasound, visually guide readers through the cases.
- New to this edition, a question-and-answer section for each case reinforces key concepts.
- Easy-to-read bulleted formatting and concise presentation of common and uncommon gastrointestinal tract diagnoses impacting the esophagus, stomach, liver, spleen, gallbladder, pancreas, intestines, appendix, and colon.

Thieme's *RadCases* means cases selected to simulate what you will see on your exams, rounds, and rotations. *RadCases* helps you to identify the correct differential diagnosis for each case, including the most critical. The series comprehensively covers the following specialties:

- Breast Imaging • Cardiac Imaging • Emergency Imaging • Gastrointestinal Imaging • Genitourinary Imaging • Head and Neck Imaging • Interventional Radiology • Musculoskeletal Radiology • Neuro Imaging • Nuclear Medicine • Pediatric Imaging • Thoracic Imaging • Ultrasound Imaging

Each *RadCases second edition* has a code allowing you one year of access to Thieme's online database of 350 cases: the 100 cases in this book plus 250 cases more.
Master your cases, pass your exams, and diagnose with confidence: RadCases!

**EDITORS**
Laura K. Findeiss, MD, FSIR, FAHA, is Professor of Radiology, Emory University School of Medicine; and Chief of Service, Department of Radiology, Grady Health System, Atlanta, Georgia, USA.

**DESCRIPTION**
A state-of-the-art guide on the interventional management of venous disease from renowned experts!

The diagnosis and management of venous disorders is a core competency of interventional radiology, comprising up to 75% of an interventional radiologist's caseload in some institutions. *Venous Interventional Radiology* by prominent interventional radiologist Laura Findeiss and an impressive group of contributors is a highly practical vascular interventional radiology reference that covers a full spectrum of venous disease. The richly illustrated book starts with an opening chapter on venous anatomy, physiology, and epidemiology.

Disease-specific chapters cover common to complex disorders, from varicose veins and venous ulceration, to thromboembolic disease and pulmonary embolism. Each chapter presents the latest minimally invasive image-guided interventions for the diagnosis and management of a specific disease. Clinical cases provide discussion of patient presentation/symptoms, clinical evaluation, procedural and non-invasive management strategies, and follow-up, all of which are key to delivering comprehensive patient care.

**Key Highlights**
- Angiographic and cross-sectional imaging findings enhance knowledge of disease processes
- A chapter dedicated to vascular/venous access provides guidance on this basic yet critical component of patient care
- The classification, evaluation, and treatment of venous anomalies and syndromes
- The authors discuss pitfalls and complications, including their own pearls of wisdom and unanswered questions

This highly practical guide is a must-have resource for trainee and veteran interventional radiologists and vascular surgeons.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**CONTENTS**
Chapter 1: Venous Anatomy and Physiology and Epidemiology of Venous Disorders
Chapter 2: Thromboembolism
Chapter 3: Cerebral Venous Thrombosis
Chapter 4: Acute Deep Venous Thrombosis: Sporadic and Compressive
Chapter 5: Pulmonary Embolism
Chapter 6: Inferior Vena Cava Filters
Chapter 7: Chronic Venous Occlusive Disease
Chapter 8: Peripheral Venous Insufficiency
Chapter 9: Vascular Access
Chapter 10: Pelvic and Gonadal Venous Reflux
Chapter 11: Portal and Mesenteric Venous Disorders
Chapter 12: Venous Anomalies and Syndromes: Classifications, Evaluation, and Treatment
State-of-the-art resource details effective breast MRI techniques for improved screening and diagnosis

Magnetic resonance imaging (MRI) of the breast has evolved into an important breast cancer screening tool and major advance in women’s health. Breast MRI is currently the most sensitive detection technique for both non-invasive and invasive cancers and follow-up in women with a new breast cancer diagnosis. It is increasingly becoming the go-to imaging method for screening women at high and intermediate risk of breast cancer and those with dense breast tissue on mammography. Yet despite its reliability and growing use, many radiologists lack the expertise to accurately perform breast MR image interpretation.

*Breast MRI Interpretation: Text and Online Case Analysis for Screening and Diagnosis* by Gillian Newstead reflects insights and expertise from one of the leading authorities on breast imaging. The book is a highly practical reference on evaluation and interpretation of breast MR imaging, with discussion of the modality as a screening and diagnostic tool. Topics include image acquisition and interpretation, clinical implementation, managing findings, and overcoming problems.

**Key Highlights**

- More than 1,800 illustrations from the University of Chicago including single selected images, side-by-side images at different time points and acquisition parameters, and 3-D images enhance understanding of breast imaging
- Select online case studies enable readers to review and interpret entire MRI datasets
- Discussion of advanced acquisition techniques and future potential applications including non-contrast imaging, quantitative dynamic imaging, and artificial intelligence using advanced computer analytic methods

This remarkable resource streamlines the breast MRI process, enabling radiologists to incorporate this imaging modality into practice, conduct screening and diagnostic exams more efficaciously, and interpret findings accurately.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**COMPETITION**

CONTENTS

Chapter 1. Overview of Breast MRI
Chapter 2. Who should be screened?
Chapter 3. Screening MRI: DCE-MRI Methods
Chapter 4. Screening MRI: Clinical Implementation
Chapter 5. Diagnostic MRI: Imaging Protocols and Technical Considerations
Chapter 6. Diagnostic MRI Interpretation
Chapter 7. Image Interpretation: Non-invasive Cancer
Chapter 8. Image Interpretation: Invasive Cancer
Chapter 9. Management of Findings Initially Detected at MRI
Chapter 10. Diagnostic MRI: Breast Cancer Applications
Chapter 11. Advanced Breast MRI Techniques
Chapter 12. Semi-quantitative and Quantitative Analysis of Breast DCE-MRI
Chapter 13: Future Applications: Radiomics and Deep Learning on Breast MRI

Daniel E. Appelbaum, MD, is Director of Nuclear Medicine and PET Imaging; Investigator, Comprehensive Cancer Center; and Professor, Department of Radiology; University of Chicago, Chicago, Illinois, USA.  
John Miliziano, MD, is Director of Nuclear Medicine, BayCare Morton Plant Hospital, Clearwater, Florida, USA.  
Anup Jacob Alexander, MD, is Assistant Professor, Department of Radiology, Loyola University Medical Center, Maywood, Illinois, USA.  
Yong Bradley, MD, is Medical Director of Molecular Imaging and Professor, Department of Radiology, University of Tennessee Medical Center, Knoxville, Tennessee, USA.

**Description**  
Essential nuclear medicine cases and board-type Q&A review to help you pass your exam!  
Recently, the field of nuclear medicine has witnessed an unprecedented explosion of new clinical diagnostic tracers, radionuclide therapies, hardware, and molecular imaging paradigms. This second edition of *RadCases Plus Q&A Nuclear Medicine* by Daniel Appelbaum, John Miliziano, Anup Jacob Alexander, and Yong Bradley reflects these advances, presenting 100 new cases and 500 high-quality images. The book covers a wide spectrum, from classic topics, such as thyroid, bone, parathyroid, and renal scans, to the paradigm-shifting concept of “theranostics.” For maximum ease of self-assessment, each case begins with the clinical presentation on the right-hand page; study that and then turn the page for imaging findings, differential diagnoses with the definitive diagnosis, essential facts, pearls and pitfalls, and more.

**Key Highlights**

- The latest radionuclide therapies to treat cancers of the prostate, neuroendocrine system, and liver  
- Discussion of up-to-date diagnostic and therapeutic PET radiotracers, theraspheres/sirspheres, and new cardiac applications for PYP SPECT  
- Recently described important artifacts such as WBC and FDG microemboli, white fat hypermetabolism, and the potentially confusing inflammation patterns in FDG PET associated with emerging cancer immunotherapies  
- Timeless topics include radiation handling/safety and resolving camera imaging errors.
Thieme's *RadCases* means cases selected to simulate what you will see on your exams, rounds, and rotations. *RadCases* helps you to identify the correct differential diagnosis for each case, including the most critical. The series comprehensively covers the following specialties:

- Breast Imaging
- Cardiac Imaging
- Emergency Imaging
- Gastrointestinal Imaging
- Genitourinary Imaging
- Head and Neck Imaging
- Interventional Radiology
- Musculoskeletal Radiology
- Neuro Imaging
- Nuclear Medicine
- Pediatric Imaging
- Thoracic Imaging
- Ultrasound Imaging

Each *RadCases second edition* has a code allowing you one year of access to Thieme's online database of cases: the 100 cases in this book plus 254 cases more.

**Master your cases, pass your exams, and diagnose with confidence: RadCases!**

**EDITOR**

**Howard S. An, MD,** is Professor and Morton International Endowed Chair, and Director, Spine Fellowship Program, Department of Orthopaedic Surgery, Rush University Medical Center, Chicago, Illinois, USA.

**Philip K. Louie, MD,** is Orthopaedic Spine Surgeon, Departments of Orthopaedics and Neurosceince, Virginia Mason Neuroscience Institute, Seattle, Washington, USA.

**Bryce A. Basques, MD, MHS,** is Clinical Spine Fellow, Rothman Orthopaedic Institute, Thomas Jefferson University, Philadelphia, Pennsylvania, USA.

**Gregory D. Lopez, MD,** is an Orthopaedic Surgeon, Department of Orthopaedic Surgery, Rush University Medical Center, Chicago, Illinois, USA.

**DESCRIPTION**

**A high-yield and comprehensive text-and-video resource for managing commonly encountered spinal conditions**

Spine surgery has experienced several paradigm shifts during the past few decades, with highly complex techniques introduced at an astoundingly rapid pace. In order for new generations of spine surgeons to stay current and thrive in this innovative era of spine surgery, access to diverse multimedia learning tools is imperative. *Video Atlas of Spine Surgery* by renowned spine surgeon and educator Howard An and Rush University Medical Center colleagues Philip Louie, Bryce Basques, and Gregory Lopez, is a cutting-edge resource for non-operative and operative management of a diverse spectrum of cervical, thoracic, and lumbar spine conditions.

Consisting of 19 chapters, the text is streamlined to facilitate learning the most important steps for each procedure. The book begins with discussion of physical exam maneuvers used to accurately diagnose specific spinal pathologies. Subsequent chapters detail extensive spine surgery techniques for managing degenerative cervical and lumbar conditions. The remaining chapters cover spinal cord, cervical, and thoracolumbar injuries; idiopathic, degenerative, and early-onset scoliosis; kyphosis; spondylolisthesis; spinal infections and inflammatory disorders; and thoracic disc disorders.

**Key Features**

- Concise, bulleted text and consistent chapter outlines feature epidemiology and prevalence, pathogenesis, clinical presentation, image findings, classification, conservative and surgical management, techniques, postoperative care, and more.
- A myriad of meticulous diagrams and illustrations, spinal imaging and photographs, and 50 high-quality spine surgery videos maximize learning.
• Technical pearls, case examples, and board-style orthopaedic surgery questions at the end of each section optimize comprehension and retention of information

This remarkable resource is a must-have for orthopaedic and neurosurgery residents and fellows, as well as practicing spine surgeons.

EDITORS
Pedro K. Beredjiklian, MD, is Senior Vice President of Clinical Affairs and Chief of the Hand Service, Rothman Orthopaedic Institute; and Professor of Orthopaedic Surgery, Sidney Kimmel Medical College of Thomas Jefferson University, Philadelphia, Pennsylvania, USA.

DESCRIPTION
A comprehensive how-to guide on hand surgery techniques from top experts!

Hand surgery requires precision, in-depth expertise, and versatility in order to perform a wide variety of operations on fractures, tendon and nerve conditions, soft tissue injuries, rheumatoid deformities, and congenital defects. Hand Surgery: Tricks of the Trade by renowned Rothman Orthopaedic Institute hand surgeon Pedro Beredjiklian and an impressive group of contributors provides a clear road map on how to perform common hand surgery procedures. Concise step-by-step text enables readers to quickly read, review, and understand the most salient points for each approach.

Organized into 14 major sections and 88 chapters, this book encompasses the full spectrum of orthopaedic surgery procedures on the tendons, nerves, bones, and joints of the hand. The text starts with two sections focused on tendon repair and reconstruction. Subsequent sections detail open and endoscopic release and decompression techniques for nerve conditions, fixation and plating of hand and wrist fractures, osteotomy for bone reconstruction, arthroplasty for arthritis, and ligament repair for instability. The last four sections discuss plastic surgery topics including the use of diverse skin grafts and flaps, Dupuytren’s disease, arthroscopy, and infections.

Key Features

- Consistent chapter layouts include key principles, indications, contraindications, positioning and anesthesia, important procedural steps, potential complications, and more.
- Nearly 1,000 illustrations and photographs provide greater understanding of impacted anatomy.
- Insightful intraoperative pearls, tips, and tricks provide surgeons with the tools to perform surgeries more effectively and thereby improve patient outcomes.

This is a must-have resource for orthopaedic surgery residents, fellows, and hand surgeons. Trainee and experienced plastic surgeons will also benefit from reading this textbook.

COMPETITION
I. Tendon Injuries
1. Extensor tendon repair (zone 1,3,5)
2. Extensor tendon repair (zone 2,4,6-9)
3. Flexor tendon repairs (zone 1)
4. Flexor tendon repair (zone 2)
5. Flexor tendon repair (zones 3-5)

II. Tendon Reconstruction
6. Staged flexor tendon reconstruction (zones 1-2)
7. Radial nerve palsy tendon transfers
8. Low median nerve palsy tendon transfers
9. Low ulnar nerve palsy tendon transfers
10. Extensor indicis proprius tendon transfer for rupture of the extensor pollicis longus tendon
11. Extensor indicis proprius/extensor digitorum communis tendon transfer for tendon rupture at the wrist
12. Superficialis transfer for rupture of the flexor pollicis longus tendon

III. Tendinopathies
13. Trigger finger/thumb release
14. DeQuervain's release
15. Extensor Carpi ulnaris tenosynovitis/instability
16. Intersection syndrome
17. Lateral epicondylar debridement
18. Medial epicondylar debridement

IV. Nerve Repair/Reconstruction
19. Nerve repair in the hand
20. Nerve repair with auto/allograft
21. Nerve conduits
22. Oberlin transfer

V. Nerve Compression
23. Open carpal tunnel release
24. Endoscopic carpal tunnel release
25. Median nerve release proximal forearm
26. Open ulnar nerve decompression at wrist
27. Endoscopic ulnar nerve decompression
28. Submuscular ulnar nerve transposition
29. Wrist denervation for pain

VI. Hand Fractures
30. Distal phalanx fractures
31. Middle/proximal phalanx (pinning)
32. Middle/proximal phalanx (open reduction and internal fixation)
33. Fixation of uni and bicondylar phalangeal fractures
34. Bony mallet fixation
35. Proximal interphalangeal joint fracture/dislocations
36. Metacarpal fracture pinning
37. Metacarpal fracture open reduction and internal fixation
38. Intramedullary fixation of metacarpal fractures
39. Thumb metacarpal base fractures (Bennett's, Rolando's)

VII. Wrist Fractures
40. Scaphoid (pinning/ORIF)
41. Percutaneous/Kapandji Pinning
42. Distal radius - Volar approach
43. Distal radius - Dorsal approach
44. Distal radius - Bridge plating
45. Distal radius - External fixation

VIII. Bone Reconstruction
46. Phalangeal osteotomies
47. Metacarpal osteotomies
48. Scaphoid nonunion (vascularized graft)
49. Scaphoid nonunion (bone graft for deformity)
50. Capitate shortening osteotomy
51. Distal radius osteotomy for malunion (volar approach)
52. Distal radius osteotomy for malunion (dorsal approach)

IX. Arthritis
53. Distal interphalangeal joint arthrodesis
54. Thumb basal joint arthroplasty - Trapeziectomy
55. Thumb basal joint arthroplasty (LRTI)
56. Wrist arthrodesis
57. Proximal row carpectomy
58. Scaphoidectomy and four corner fusion
59. Partial distal ulna excision (Wafer, Hemiresection)
60. Complete distal ulna excision (Darrach)

X. Instability
61. Finger (PIP/DIP) collateral ligament repair
62. Finger MPJ collateral ligament repair
63. Thumb MPJ collateral ligament repair
64. Thumb MPJ collateral ligament reconstruction
65. Scapholunate ligament repair
66. Scapholunate ligament reconstruction – capsulodesis
67. Scapholunate ligament reconstruction – tendon graft
68. Distal radioulnar ligament repair/reconstruction

XI. Skin
69. Split thickness graft
70. Full thickness graft
71. V-Y advancement flap
72. Volar advancement flaps – Moberg
73. Cross finger (and reverse) flap
74. Thenar Flap
75. Axial Flag Flap
76. Z-plasty
77. Radial forearm flap

XII. Dupuytren's disease
78. Needle aponeurotomy
79. Subtotal fasciectomy

XIII. Arthroscopy
80. Diagnostic arthroscopy (MP/CMCJ)
81. Diagnostic arthroscopy (wrist)
82. Triangular fibrocartilage complex/interosseous ligament debridement
83. Triangular fibrocartilage complex repair

XIV. Infection
84. Paronychia
85. Felon
86. Flexor tenosynovitis
87. Septic arthritis
Synopsis of Hip Surgery

by renowned hip specialists Shane Nho, Joshua Harris, Brett Levine, and an impressive group of contributors provides a well-rounded perspective on the surgical and nonsurgical management of common to rare hip conditions. The generously illustrated clinical reference is both concise and comprehensive, not only encompassing the full age continuum but also a wide array of hip disorders such as congenital and degenerative issues and problems associated with sports injuries.

The first seven chapters lay a solid foundation, covering hip anatomy, patient history, physical examination, radiographic imaging, diagnostic tests, biomechanics, pathomechanics, and implant biology. Subsequent chapters detail prevalent conditions such as femoroacetabular impingement syndrome, hip dysplasia, soft-tissue injuries, and osteoarthritis. The text also covers less common diseases including synovial proliferative disorders, primary and metastatic tumors, and osteonecrosis. Procedure-specific chapters focus on primary and revision total hip arthroplasty and hip replacement surgery.

Key Features

- An outline format and bulleted text provide a quick, easy reference for trainees and practitioners to consult prior to conferences, at the office, and in the operating room
- About 300 color illustrations enhance understanding of impacted anatomy and procedures
- Fractures of the pelvis and hip including intracapsular, extracapsular, and acetabulum
- Discussion of pediatric conditions including Legg-Calvé-Perthes disease, slipped capital femoral epiphysis, and hip fractures
This concise resource is essential reading for orthopaedic surgery residents, orthopaedic sports medicine and adult reconstruction fellows, general orthopaedic surgeons, and hip specialists.

DESCRIPTION

A state-of-the-art guide on oral cancer management from distinguished experts!

Oral Cancer: Evaluation, Therapy, and Rehabilitation edited by prominent Johns Hopkins clinicians and educators Carole Fakhry, Karen Pitman, Ana Kiess, and David Eisele provides a comprehensive, state-of-the-art review on the diagnosis and management of oral cancer. This unique resource fills a void in the literature by exploring surgical and reconstructive issues specific to each subsite of the oral cavity. Important pre- and post-treatment evaluations by dental, speech language pathology, and the oncologic care team are reviewed.

The comprehensive book is divided into 10 sections, each focused on different facets of the patients' trajectory. The text starts with epidemiology of oral cavity cancer and discussion of patient populations at increased risk of oral cavity cancer. The book details pre-cancers, multidisciplinary diagnostic evaluations, treatment, post-treatment, recurrent and metastatic oral cancer, and palliative care, concluding with future directions such as chemoprevention. A full spectrum of oral neoplasms are covered in depth, including different types of squamous cell cancer, primary malignancies of the mandible, and sublingual and minor salivary gland malignancies.

Key Features

- All oral cavity subsites are approached from both an ablative and reconstructive standpoint, with dedicated chapters focused on specific oral cancer reconstructive techniques
- Discussion of oncologic considerations encompassing radiation and medical oncology including definitive radiation therapy, brachytherapy, adjuvant radiation therapy, and adjuvant chemotherapy/novel therapeutics
• Clinical pearls cover complications of both surgery and radiation therapy, as well as psychological and dental implications of therapy
• High-quality illustrations, photographs, and videos further elucidate impacted anatomy and techniques

Residents and clinicians in otolaryngology-head and neck surgery, oral and maxillofacial surgery, head and neck reconstructive surgery, medical oncology, and radiation oncology will benefit from reading this excellent resource. Dentists who wish to further their knowledge about oral cancers will also find it an invaluable reference.

COMPETITION There is not another book on the market specific to oral surgery. Most readers will go to head and neck cancer books for information on this topic.

CONTENTS

Section I. Background
1 Epidemiology of Oral Cavity Cancer
2 Patient Populations at Increased Risk for Oral Cavity Cancer

Section II. Premalignancies of the Oral Cavity
3 Premalignant Oral Lesions
4 Management of Oral Premalignant Lesions

Section III. Diagnostic Evaluation of Oral Cavity Cancers
5 Evaluation and Staging for Cancers of the Oral Cavity
6 Photographic Documentation of the Oral Cavity
7 Imaging of Oral Cavity Cancers
8 Pathology and Cytopathology: Oral Malignant Mucosal Neoplasms
9 Pathology: Oral Cavity Salivary Gland Malignancies

Section IV. Pretreatment Considerations
10 Pretreatment Dental Evaluation
11 Pretreatment Speech-language Pathology Evaluation
12 Nutrition for Oral Cancer Patients

Section V. Evaluation and Surgical Management of Subsite-specific Oral Squamous Cell Cancers
13 Squamous Cell Cancer of the Lip
14 Reconstruction of the Lip
15 Squamous Cell Cancer of the Oral Tongue
16 Reconstruction of the Oral Tongue
17 Squamous Cell Cancer of the Floor of Mouth
18 Floor of Mouth Reconstruction
19 Squamous Cell Cancer of the Buccal Mucosa
20 Buccal Reconstruction
21 Squamous Cell Cancer of the Alveolar Ridge
22 Reconstruction of Alveolar Ridge
23 Squamous Cell Cancer of Retromolar Trigone
24 Reconstruction of the Retromolar Trigone
25 Squamous Cell Cancer of the Palate
26 Reconstruction of the Palate
27 Malignant Tumors of the Mandible
28 Reconstruction of Mandibular Defects
29 Primary Malignancies of the Maxilla
30 Reconstruction of the Maxilla
31 Reconstruction of Multisite Defects
32 Neck Management for Oral Malignancies
33 Definitive External Beam Radiotherapy for Oral Cavity Cancer
34 Brachytherapy for Oral Cavity Cancer
Section VI. Adjuvant Therapeutic Considerations
35 Adjuvant Radiotherapy for Oral Cavity Cancer
36 Adjuvant Chemotherapy/Novel Therapeutics

Section VII. Management of Nonsquamous Cell Cancers of the Oral Cavity
37 Oral Cavity Salivary Gland Malignancies (Sublingual and Minor)
38 Uncommon Oral Cavity Malignancies

Section VIII. Posttreatment Considerations
39 Oral Rehabilitation
40 Complications of Oral Cancer Surgery
41 Radiotherapy Related Side Effects in the Treatment of Oral Cavity Malignancies
42 Psychosocial Rehabilitation of Oral Cancer Patients
43 Posttreatment Surveillance
44 Posttreatment Speech-language Pathology
45 Posttreatment Dental Considerations
46 Oral and Dental Complications of Oral Cancer Treatment
47 Trismus in the Head and Neck Cancer Patient

Section IX. Considerations for Recurrent and Metastatic Oral Cavity Cancers
48 Management of Locoregional Recurrent Oral Cavity Cancers
49 Management of Metastatic Oral Cavity Cancers
50 Immunotherapy
51 Palliative Care/Considerations for Metastatic Oral Cavity Cancers

Section X. Future Directions
52 Cancer Prevention and Oral Preneoplasia

Microbiology, Student Education

Medical students learning microbiology and infectious diseases for Step 1 of USMLE®; Osteopathic medical students preparing for the COMLEX exam; Pharmacy students; PA students and nurses

Tracey A. H. Taylor, PhD, is Associate Professor, Department of Foundational Medical Studies, Oakland University William Beaumont School of Medicine, Rochester, Michigan, USA.

Dwayne Baxa, PhD, is Assistant Professor, Department of Foundational Medical Studies, Oakland University William Beaumont School of Medicine, Rochester, Michigan, USA.

Matthew Sims, MD, PhD, is Professor, Department of Internal Medicine, Oakland University William Beaumont School of Medicine, Rochester, Michigan, USA.

High-yield microbiology cases help students apply knowledge and prepare for board exams

Learning Microbiology and Infectious Diseases: Clinical Case Prep for the USMLE® by Tracey A. H. Taylor, Dwayne Baxa, and Matthew Sims presents diverse cases that encourage problem-based learning, which is key to building diagnostic skills. Each case portrays a real-life scenario, promoting a bridge from foundational knowledge to its application. A series of USMLE-style questions with thorough explanations provide an understanding of microbiology and infectious diseases, an ability to differentiate between infections and viruses, and identify bacteria, fungi, and parasites. Questions cover causative agents, disease transmission, mechanism of pathogenesis action, and pharmacotherapy.

Key Features

- 50 case studies with images mirror situations seen in everyday practice
- An intermingling of bacteriology, virology, mycology, parasitology cases, and organ systems reflect real-world patient scenarios and encourage critical thinking
- Comprehensive cases encompass symptoms and duration, medical and family history, physical exam and lab findings, differential diagnosis, and treatment and prevention

This essential, highly practical resource will help medical students build problem-solving skills, assess microbiology and infectious disease knowledge, and fully prepare for the boards.

Case 1 Adult with a Cough of a Long Duration
Case 2 Child with a Sore Throat and Red Eyes
Case 3 Adult in Respiratory Distress
Case 4 Adolescent with Sore Throat and Malaise
Case 5 Toddler with Upper Respiratory Symptoms
Case 6 Elderly Male with Two Days of Fever, Chills, and Cough
Case 7 Severely Ill Elderly Male in Respiratory Distress
Case 8 Teenager with a Two-Week-Long Cough
Case 9 Adult Male with Persistent Cough and Malaise
Case 10 Infant with Severe Congestion
Case 11 Adult Male with Fever, Myalgias, and Respiratory Distress
Case 12 Adult Male with Fever, Chills, and Night Sweats
Case 13 Child with Bloody Diarrhea
Case 14 Child with Stomach Pain and Fever
Case 15 Outbreak of Diarrheal Illness
Case 16 Hospitalized Adult Female Who Develops Diarrhea
Case 17 HIV-Positive Male with Diarrhea
Case 18 Adult with Jaundice
Case 19 Adult with Right Upper Quadrant Pain
Case 20 Adult Female with Epigastric Pain after Eating
Case 21 Elderly Female with Fever and Flank Pain
Case 22 Adult Male with Rash
Case 23 Young Female with Joint Pain
Case 24 Teenager with Syncopy
Case 25 Adult Male with Painful Penile Ulcers
Case 26 Adult Male with Back Pain
Case 27 Adult Female with Vaginal Discharge
Case 28 Adult Male with a Red Eye
Case 29 Adult Female with Lesion on Labia
Case 30 Adult Male with Back Pain After Trauma
Case 31 Teenage Girl with Expanding Skin Lesion
Case 32 Adult Male with Foot Ulcer
Case 33 Adult Male with Flu-Like Illness and Rash
Case 34 Febrile Teenager with Disseminated Rash
Case 35 Adult Male with Worsening Shortness of Breath
Case 36 Adult Female with Facial Pain
Case 37 Adult Female with Painful Rash
Case 38 Adult Female with Headache and Confusion
Case 39 Adult Male with Painful, Swollen Lymph Nodes
Case 40 Toddler with High Fever and Upper Respiratory Symptoms
Case 41 Adult Female with Febrile Illness
Case 42 Agitated Male with Rapid Progression to Coma
Case 43 Teenager with Headache and Fever
Case 44 Elderly Female with Severe Headache and Nausea
Case 45 Adult Female with Headache and Disorientation
Case 46 Adult Male with Headache for Several Months
Case 47 Febrile Teenager with Headache and Neck Stiffness
Case 48 Travelers with Acute Febrile Illness
Case 49 Newborn with Jaundice
Case 50 Teenager with Pain in Groin
Yoga and Anatomy: An Experiential Atlas of Movement by Barbie Klein and Mackenzie Loyet describes the muscular actions responsible for the movements of the body during the practice of yoga. In the first part, *asanas* (postures) are grouped by distinct categories: standing poses, forward folds, backbends, spinal twists, and more. The second part provides an atlas reference that connects the underlying anatomy with the muscles used to produce these movements.

**Key Features**

- A series of three to four transitions along with contraindications and modifications safely guide readers through each pose
- Connections are delineated through the labeling of muscles used during each transition, as well as illustrated overlaid anatomy included in the final image of each *asana*
- High-quality figures and tables reinforce each muscle's origin, insertion, action, innervation, and relationship to other anatomical structures

This is an essential anatomical self-study resource for students of physical therapy, osteopathic, and allopathic medicine. It also provides a thorough learning and teaching tool for yoga anatomy and mindful movement workshops in medical and allied health profession programs.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**EDITORS**

Mohamed M. Elawdy, MD, MSc, ECFMG certified, is Specialist (A) in Urology, Sohar Hospital, Ministry of Health, Sohar, Oman, and Urology and Nephrology Center, Mansoura, Egypt; and International Fellow, Thomas Jefferson University Hospital, Philadelphia, Pennsylvania, USA.

Dara B. Oken, MEd, is a Pronunciation Modification Trainer, Articulation LLC, and an Adult ELL Teacher, Minneapolis Adult Education, Minneapolis Center for Adult Learning, Minneapolis, Minnesota, USA.

**DESCRIPTION**

*CS for IMGs is a comprehensive resource designed to help IMGs pass the Step 2 CS exam on the first attempt*

*Thieme Review for the USMLE® Step 2: CS for IMGs* includes all the components that International Medical Graduates (IMGs) need to pass the USMLE® Step 2 Clinical Skills (CS) exam. Created by international CS exam prep instructor and physician Mohamed Elawdy and expert American pronunciation trainer Dara Oken, this groundbreaking resource reflects their combined expertise in preparing IMGs for the CS exam. As such, it's the only resource needed for USMLE® CS prep!

**Key Features**

The first all-in-one CS review book

- Addresses all three exam components: ICE, CIS, and SEP
- ICE section provides systematic organization and consistency in its coverage of Medical History Taking, Physical Examination, and Patient Note
- SEP section includes word-level concepts (syllables and stress), sound-level concepts (consonants and vowels), and grammar concepts

Practice-intensive tools

- Role-plays and model videos with standardized patients (SPs)
- SEP pronunciation and grammar explanations, exercises, and videos
- Flowcharts, checklists, and self-assessments
- Easy to replicate approach to target differential diagnosis

The text and the accompanying audio and videos provide unparalleled study prep tailored to the CS that will lead to a higher score on this vital exam.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

The field of dual catalysis has developed rapidly over the last decade, and these volumes define its impact on organic synthesis. The most important, basic concepts of synergistic, dual catalytic cycles are introduced, providing newcomers to the field with reliable information on this new approach to facilitating the synthesis of organic molecules. Background information and reliable procedures for challenging transformations in synthesis are presented, applying the concept of cooperative dual catalysis as a means of increasing molecular complexity in the most efficient manner. The most useful, practical, and reliable methods for dual catalysis combining metal catalysts, organocatalysts, photocatalysts, and biocatalysts are presented.

## CONTENTS

### 1.1 Metal/Metal Dual Catalysis
1.1.1 General Principles of Metal/Metal Dual Catalysis
1.1.2 Palladium/Copper and Palladium/Nickel Dual Catalysis
1.1.3 Rhodium/Palladium Dual Catalysis
1.1.4 Iridium/Zinc and Iridium/Copper Dual Catalysis
1.1.5 Gold/Iron Dual Catalysis
1.1.6 Gold Dual Catalysis with Palladium, Nickel, or Rhodium
1.1.7 Gold/Gold Dual Catalysis

### 1.2 Transition-Metal/Photocatalyst Dual Catalysis
1.2.1 General Principles of Transition-Metal/Photocatalyst Dual Catalysis
1.2.2 Nickel/Photocatalyst Dual Catalysis
1.2.3 Palladium/Photocatalyst Dual Catalysis
1.2.4 Gold/Photocatalysis Dual Catalysis
The field of dual catalysis has developed rapidly over the last decade, and these volumes define its impact on organic synthesis. The most important, basic concepts of synergistic, dual catalytic cycles are introduced, providing newcomers to the field with reliable information on this new approach to facilitating the synthesis of organic molecules. Background information and reliable procedures for challenging transformations in synthesis are presented, applying the concept of cooperative dual catalysis as a means of increasing molecular complexity in the most efficient manner. The most useful, practical, and reliable methods for dual catalysis combining metal catalysts, organocatalysts, photocatalysts, and biocatalysts are presented.

**2.1 Metal/Organocatalyst Dual Catalysis**
2.1.1 General Principles of Metal/Organocatalyst Dual Catalysis
2.1.2 Palladium/Organocatalyst Dual Catalysis
2.1.3 Gold/Organocatalyst Dual Catalysis
2.1.4 Rhodium/Organocatalyst Dual Catalysis

**2.2 Metal/Biocatalyst Dual Catalysis**
2.3 Dual Catalysis with Two Organocatalysts
2.4 Organocatalyst/Photocatalyst Dual Catalysis
2.5 Organocatalyst/Biocatalyst Dual Catalysis
2.6 Dual Catalysis with Two or More Biocatalysts
Harnessing the versatile reactivity of boron for organic synthesis

The widespread use of organoboron compounds justifies the efforts devoted to their synthesis, as well as toward developing an understanding of their reactivity. The nature of the mono- or diboron species is of paramount importance in determining the reversible covalent binding properties of the boron atom with both nucleophiles and electrophiles. By wedging the rich chemical potential of organoboron compounds to the ubiquity of organic scaffolds, advanced borylation reactions have the potential to open unprecedented synthetic alternatives, and new knowledge in the field should encourage chemists to use organoboron compounds.

In this volume, the main objective is to provide a collection of the most useful, practical, and reliable methods, reported mainly within the last decade, for boron activation and boron reactivity. The volume covers the main concepts of organoboron compounds and includes experimental procedures, enabling newcomers to the field the instant and reliable application of the new tools in synthesis. Rather than aiming for a comprehensive coverage, the most advanced solutions for challenging transformations are introduced. To this end, a team of pioneers and leaders in the field have been assembled who discuss both the practical and conceptual aspects of this rapidly growing field.

CONTENTS

1 Introduction
2 Mechanistic Aspects of Carbon—Boron Bond Formation
3 Diboron Compounds: Synthesis and Applications
4 Synthesis of \textit{gem}-Diboron Compounds from Diboron Reagents
5 \textit{anti} Boron Addition to Alkynes
6 Borylation of Carboxyl and Imine Groups
7 Borylative Ring Opening
8 Borylative Ring Closing
9 Decarbonylative/Decarboxylative Borylation
10 Borylation Reactions in Water
11 Nanocatalyzed Borylation Reactions
12 Reactions through Radical Boryl Moieties
13 Boron \textquoteleft ates\textquoteright Complexes for Asymmetric Synthesis
14 Application of Selective Asymmetric Borylation to Target Compounds

**EDITORS**
Gary A. Molander

**DESCRIPTION**
The Impact of Dual Catalysis on Organic Synthesis

This workbench edition, edited by Gary A. Molander, sheds light on the influence of dual catalysis on organic synthesis. The volumes introduce the most important concepts of synergistic as well as dual catalytic cycles, providing newcomers to the field with reliable information on this new approach to facilitating the synthesis of organic molecules.

Expand your knowledge of the most reliable methods for dual catalysis combining:

- metal catalysts,
- organocatalysts,
- photocatalysts,
- and biocatalysts

**CONTENTS**

**Volume 1**

1.1 Metal/Metal Dual Catalysis
   1.1.1 General Principles of Metal/Metal Dual Catalysis
   1.1.2 Palladium/Copper and Palladium/Nickel Dual Catalysis
   1.1.3 Rhodium/Palladium Dual Catalysis
   1.1.4 Iridium/Zinc and Iridium/Copper Dual Catalysis
   1.1.5 Gold/Iron Dual Catalysis
   1.1.6 Gold Dual Catalysis with Palladium, Nickel, or Rhodium
   1.1.7 Gold/Gold Dual Catalysis

1.2 Transition-Metal/Photocatalyst Dual Catalysis
   1.2.1 General Principles of Transition-Metal/Photocatalyst Dual Catalysis
   1.2.2 Nickel/Photocatalyst Dual Catalysis
   1.2.3 Palladium/Photocatalyst Dual Catalysis
   1.2.4 Gold/Photocatalyst Dual Catalysis

**Volume 2**

2.1 Metal/Organocatalyst Dual Catalysis
   2.1.1 General Principles of Metal/Organocatalyst Dual Catalysis
   2.1.2 Palladium/Organocatalyst Dual Catalysis
   2.1.3 Gold/Organocatalyst Dual Catalysis
2.1.4 Rhodium/Organocatalyst Dual Catalysis
2.2 Metal/Biocatalyst Dual Catalysis
2.3 Dual Catalysis with Two Organocatalysts
2.4 Organocatalyst/Photocatalyst Dual Catalysis

**DESCRIPTION**

Boost your knowledge of modern spectroscopic methods!

This reference work provides you with essential knowledge for the application of modern spectroscopic methods in organic chemistry. All methods are explained based on typical practical examples, theoretical aspects, and applications.

The following spectroscopic methods are explained and examples are given:

- UV/Vis Spectroscopy  
- Infrared (IR) and Raman Spectroscopy  
- Nuclear Magnetic Resonance Spectroscopy (NMR)  
- Mass Spectrometry (MS)

The textbook has been a standard reference for decades. As it conveys necessary knowledge for examinations at all universities it is compulsory reading for every organic chemistry student!

**DESCRIPTION**

*The Art of Cupping*

For over 5,000 years, cupping has been used across the globe to treat a broad spectrum of health disorders. It is a safe and well-tolerated therapy and requires only simple and inexpensive tools to achieve highly effective results. This comprehensive guide features all the information a practitioner needs, including step-by-step instructions for application, treatment of specific health problems, and a review of the historical background.

**Key Features:**

- Detailed explanation of dry and wet cupping
- Practical application described for 48 different disorders
- Illustrated by real-life photographs from the author's practice
- Compact, user-friendly format for easy reference

Each chapter of the practical section deals with a specific area of the body and the disorders associated with it. Each topic discusses a patient's complaint, the appropriate cupping application, supplementary and alternative therapies, as well as preventive treatment. Practice-oriented and highly detailed, this is an invaluable reference for experienced practitioners and students alike.

The second edition features new subchapters on cupping in foot reflexology, treating irritable bowel syndrome, vegetative regulation disorders, and burnout. The topics are presented in a new and improved layout and explained with the help of enhanced four-color illustrations.

*The Art of Cupping* is the ideal introduction to this fascinating traditional healing method, while also serving as a helpful review for the experienced practitioner.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**COMPETITION**

**CONTENTS**

Part 1 Introduction and Foundations

1 Historical Background.
2 What Do We Mean by ‘Cupping’?
DESCRIPTION

Unique textbook presents and integrates dental sciences essential for the practice of dentistry

Applied Oral Physiology: The Integration of Sciences in Clinical Dentistry by prosthodontist, biologist, and educator Robin Wilding integrates basic science topics traditionally taught separately, enabling readers to understand the interconnected relationship between the scientific and clinical aspects of dentistry. On the broadest level, this well-researched, readable, and easy-to-study book brings together related elements of anatomy, physiology, microbiology, and biochemistry. Integration of these areas helps students comprehend the different elements of dental science, thereby improving their ability to understand and treat patient problems. For example, understanding how saliva influences oral health is vital information every dentist needs to know.

Key Features

- An introduction to the structure and related function of teeth and oral soft tissues
- The relationship between oral ecology and biofilms, dental caries, nutrition, and mucosal immunity
- Discussion of clinical and neurogenic pain in context with functions including taste, reflexes, mastication, swallowing, and speech
- A balanced presentation of TMJ dynamics including the role that physical and psychosocial factors play in dysfunction
- Content considered to be non-essential is presented in appendices at the end of the book, placing the focus on need-to-know information

Topics such as the oral cavity environment, cellular interactions, the extracellular matrix, and bone physiology are covered in one highly relevant resource for clinical dental practice, making this the quintessential text for undergraduate dentistry students.

COMPETITION

CONTENTS

1. The Origins of Teeth
2. Dental Hard Tissues
3. Oral Mucosa and Periodontium
4. The Ecology of the Oral Cavity
The Surgical Handbook by Michael Karsy and esteemed colleagues addresses training gaps by exposing early trainees, medical students, residents, advanced practice providers, and non-specialists to a diverse array of surgical subspecialty diseases and acute management topics. The impressive breadth of content presented in this resource reflects multidisciplinary contributions. The text covers far more than existing medical handbooks, while featuring concise distillation of key points conducive to learning.

The book is organized by 16 sections starting with general perioperative and operative management of topics that apply to all surgeons, such as critical care, trauma, and general surgery. Subsequent chapters encompass a full spectrum of surgical specialties—from vascular and cardiothoracic—to neurosurgery and orthopaedics, as well as handy evidence-based reference guides. The focused collection of topics within each section serves as a useful resource for learning about management of specific diseases and also a starting point for self-directed learning.

Key Highlights

- Bullet points, illustrations, diagrams, and figures enhance rapid acquisition of knowledge
- Tables on acute diagnosis and management of common inpatient scenarios such as electrolyte and acid/base disturbances provide easy-to-use tools
- Clinical references include practice pearls on trauma management, key medications for common inpatient conditions, acute patient events (e.g. cardiac and stroke), anesthesia and intubation medications, and preoperative and post-anesthesia issues
This backpack companion will benefit medical students and junior surgical residents during rotations and clerkships and help early-career clinicians gain insights into timely disease recognition, initial management, surgical risks, and when to make referrals.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**Editors**

Tobias K. Boehm, DDS, PhD, is Associate Professor, College of Dental Medicine, Western University of Health Sciences, Pomona, California, USA.

Sam Chui, DDS, FAGD, is Assistant Professor, College of Dental Medicine, Western University of Health Sciences, Pomona, California, USA.

**Description**

*Guide to Periodontal Treatment Solutions for General Dentistry* by Tobias Boehm and Sam Chui is a concise textbook on periodontics geared towards dental students, residents, and early-career general dentists. Each chapter includes cases and evidence-based practice exercises that illustrate key concepts and enable application of these concepts through independent study or non-lecture based teaching methods. The book is arranged in a logical sequence mirroring the manner in which patients present with periodontal disease, from the initial exam to state-of-the-art treatments.

The opening chapters cover gingivitis and disease basics, data collection, epidemiology, classification systems, and diagnosis. Subsequent chapters encompass a wide array of nonsurgical and surgical approaches for treating issues such as gum pockets, furcation, gingival recession, mucogingival defects, and tooth mobility, as well as when to refer patients. The latest methods for controlling gingival inflammation are discussed, including scaling and root planing, systemic and local antimicrobial therapy, antiseptics, lasers, and photodynamic therapy.

**Key Features**

- Case studies, review questions and explanations, coupled with diagrams and illustrations, enhance understanding and knowledge retention
- Nine chapters feature key points of periodontal treatment, with detailed step-by-step instructions on how to approach clinical problems
- Prognostic tools and risk assessments for predicting tooth longevity with discussion of various tooth replacement options

This is an essential resource that guides dental students, residents and early career stage dentists through the fundamental aspects of periodontal treatment. The book also provides an excellent classroom tool for dental school instructors.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**Competition**

CONTENTS

Chapter 1: Background: Periodontal Disease Mechanisms and Wound Healing
Chapter 2: Gathering Periodontal Data
Chapter 3: Identifying Periodontal Diseases
Chapter 4: Predicting Tooth Longevity
Chapter 5: Controlling Gingival Inflammation
Chapter 6: Reducing Pockets
Chapter 7: Treating Teeth with Furcation Involvement
Chapter 8: Correcting Gingival Recession and Mucogingival Defects
Chapter 9: Managing Tooth Mobility
### EDITORS

**Kimberly A. Davis, MD, MBA, FACS, FCCM,** is Professor of Surgery, Vice Chairman for Clinical Affairs, and Chief of the Division of General Surgery, Trauma and Surgical Critical Care, Yale School of Medicine, New Haven, Connecticut, USA.

**Raul Coimbra, MD, PhD, FACS,** is Surgeon-in-Chief and Director of the CECORC – Comparative Effectiveness and Clinical Outcomes Research Center, Riverside University Health System Medical Center, Riverside, California; and Professor of Surgery, Loma Linda University School of Medicine, Loma Linda, California, USA.

### DESCRIPTION

Unique book provides comprehensive discussion of MIS versus traditional techniques in modern Acute Care Surgery

The combination of a surgeon shortage and poor access to emergency surgical care led to establishment of the Acute Care Surgery paradigm and subspecialty in 2003. Concurrently, minimally invasive approaches revolutionized surgical practice in the 21st century. In the U.S., acute care surgeons stand at the front line of patient care for emergency general surgery, trauma, and surgical critical care, and thus are positioned to positively impact healthcare delivery and costs. **Surgical Decision Making in Acute Care Surgery** by renowned surgeons Kimberly Davis and Raul Coimbra is the first text that comprehensively discusses when to use minimally invasive techniques and advanced technology versus traditional open procedures in acute traumatic and non-traumatic surgical emergencies.

The text begins with three opening chapters covering the background of the Acute Care Surgery subspecialty, anatomic and physiological considerations, and the impact of acute surgical illness on pre- and post-operative critical care decisions. Subsequent chapters outline surgical approaches for commonly encountered acute conditions. Trauma chapters cover interventions for cervical, blunt and penetrating abdominal, and thoracic injuries. Emergency general surgery topics run the gamut from appendicitis to emergency management of paraesophageal hernias and esophageal perforations. An impressive group of senior surgeons and younger rising stars in American surgery share their expertise throughout the book.

### Key Highlights

- Disease-specific chapters include epidemiology, pathogenesis, diagnostic tools, treatment strategies, surgical techniques, cost analyses, complications, and national guidelines where available
- Subchapters feature expert commentary on preceding chapters, including clinical pearls and controversies (e.g. operative vs. nonoperative management)
- In-depth discussion of surgical decision making encompasses the type of surgical approach, as well as indications and contraindications for MIS
• The roles of MIS procedures such as laparoscopy, thoracoscopy, radiology-based percutaneous techniques, as well as endovascular surgery are examined

The quintessential resource on contemporary Acute Care Surgery practice, this is a must-read for residents, junior faculty, and practicing surgeons in this discipline.

CONTENTS  1 The Definition of Acute Care Surgery  
2 Anatomic and Physiological Considerations  
3 Impact of Acute Surgical Illness on Critical Care Decisions Pre- and Post-Operatively  
4 Cervical Trauma  
  4.1 Expert Commentary on Cervical Trauma  
5 Blunt Abdominal Trauma  
  5.1 Expert Commentary on Blunt Abdominal Trauma  
6 Penetrating Abdominal Trauma  
  6.1 Expert Commentary on Penetrating Abdominal Trauma  
7 Thoracic Trauma  
  7.1 Expert Commentary on Thoracic Trauma  
8 Vascular Trauma  
  8.1 Expert Commentary on Vascular Trauma

Thieme Group
Returns Policy

Effective from 1st January 2009

All consignments by Thieme Publishers are delivered without any automatic returns authorization provision. All returns are governed by the following rules:

General Remarks
- For all returns, authorization is granted strictly at the discretion of the publisher, except for faulty, damaged or wrongly delivered titles (see below)
- The basic principle for returns in any one year is that these should not exceed 5% of the previous year’s net turnover for any one company
- The publisher does not guarantee to send back any products that are outside these returns rules and reserves the right to destroy these without compensation.
- Transport costs for returns are covered by the sender (except for Item 4)

1) Full credit can be granted only if
- prior permission to return has been requested and authorized
- the request for permission to return states invoice number, date, and reason for return
- returns are in mint condition, without defacing marks, stickers or security devices
- the request for return authorization is made at the latest twelve (12) months from invoice date
- returns are made directly to our warehouse address

2) No credit will be granted if products are
- returned without prior authorization
- not returned in a resalable condition as described above
- not accompanied by a delivery note listing invoice numbers and dates
- old or out-of-print editions returned more than three (3) months after publication of the new edition

3) No returns can be accepted or authorized
- if made or requested later than twelve (12) months from invoice date
- if made for the previous edition of a newly published work later than 3 months from publication date
- for offline electronic or audiovisual material for continuation orders, series orders and reduced-price or special priced books or sets
- for books with a selling price value (gross) of less than Euro 50.

4) No prior permission is required for
- imperfect copies
- wrongly delivered books (publisher’s error)
In such cases, please include invoice number, date, and reason for return.

For our full terms and conditions please go to
