2021 Quarter 4 Advanced Book Information

Featured Titles
- Nov-21 Wide Awake Hand Surgery and Therapy Tips, 2nd Edition
- Nov-21 Essentials of Clinical Examination, 9th Edition

Neurosurgery Titles
- Nov-21 Tumors of the Spinal Canal: Surgical Approaches and Future Therapies, 1st Edition
- Nov-21 Microsurgical and Endoscopic Approaches to the Skull Base: Anatomy, Tactics, and Techniques, 1st Edition

Plastic Surgery Titles
- Nov-21 The Duke Cleft Video Collection, 1st Edition

Dermatology Titles
- Nov-21 Mohs Micrographic Surgery: From Layers to Reconstruction, 1st Edition

Radiology Titles
- Dec-21 Endovascular Management of Ischemic Stroke: A Case-Based Approach, 1st Edition

Otolaryngology Titles
- Oct-21 Techniques and Key Points for Endoscopic Cranial Base Reconstruction
- Nov-21 The Frontal Sinus: Surgical Approaches and Controversies, 1st Edition

Ophthalmology Titles
- Oct-21 Optical Coherence Tomography in Glaucoma, 1st Edition

Other Titles
- Nov-21 Clinical Case Studies Across the Medical Continuum for Physical Therapists, 1st Edition
- Sep-21 Science of Synthesis: Knowledge Updates 2021/3, 1st Edition

Additional Information
- Out of Print Jan-Sep 2021
- Representatives & Exclusive Distributors
Wide Awake Hand Surgery and Therapy Tips

EDITORS
Donald H. Lalonde, BSc (Hons), MD, MSc, FRCSC, is Professor, Division of Plastic and Reconstructive Surgery, Dalhousie University, Saint John, New Brunswick, Canada.

DESCRIPTION
The definitive multimedia resource on wide awake hand surgery from renowned experts

WALANT (Wide Awake Local Anesthesia No Tourniquet) eliminates the need for preoperative testing, sedation, intravenous insertion, and monitoring in upper and lower limb surgery. Coupled with minimal pain injection techniques using pure local anesthesia with lidocaine and epinephrine, this technique has significantly improved hand surgery for patients and surgeons in many ways. Wide Awake Hand Surgery and Therapy Tips, Second Edition, provides readers with the best and latest WALANT advances from Donald H. Lalonde and an impressive group of hand surgeons from 15 countries that have incorporated this groundbreaking technique into practice to benefit their patients. Each richly illustrated chapter encompasses evidence-based benefits, step-by-step guidance, patient education tips, detailed injection directions, surgery and therapy tips and tricks, postsurgical management, and related videos.

WALANT produces better outcomes in flexor and extensor tendon repair, tendon transfer, tenolysis, tendon grafts, and finger fracture surgery because unsedated patients can easily move reconstructed parts during surgery. This allows surgeons to make required adjustments and teach patients uninterrupted while they are awake. Eliminating sedation also decreases risks, increases patient safety, and reduces pain associated with intravenous insertion. Simple surgeries such as trigger finger and carpal tunnel release no longer require costly main operating rooms. Instead, they can be performed in minor procedure rooms with evidence-based sterility, resulting in lower costs and reduced waste.

New Features

- A three times larger video library with more than 500 videos, most of which are new
- New chapters on upper and lower limb fracture plating of the wrist, forearm, elbow, acromion, clavicle, tibia, fibula, ankle, and foot
- More than eight hours of video education covering ultrasound hand diagnosis and ultrasound-guided surgery
- Innovative hand therapy techniques made possible by WALANT detailed under Therapy Tips
- The use of pencil test and relative motion splinting to resolve numerous hand problems
- New strategies to implement WALANT in hospitals

This must-have resource will help hand surgeons, hand therapists, and allied nurses prevent unnecessary costs and risks, reduce complications, and improve patient outcomes.

EDITORS

Robert X. Murphy Jr., MD, MS, CPE, FACS, is Professor of Surgery, Morsani College of Medicine at the University of South Florida, Tampa, Florida, USA; Program Director, LVHN Residency in Plastic Surgery and Pool Chair of Community Health, Lehigh Valley Health Network, Allentown, Pennsylvania, USA.

Charles K. Herman, MD, MBA, FACS, is a Plastic Surgeon, Department of Surgery, Lehigh Valley Hospital-Pocono, Lehigh Valley Health Network, East Stroudsburg, Pennsylvania, USA.

DESCRIPTION

A reader-friendly, how-to guide on reconstructive plastic surgery from international experts

Reconstructive Plastic Surgery: An Atlas of Essential Procedures edited by esteemed authors, educators, and surgeons Robert X. Murphy Jr. and Charles K. Herman is a comprehensive resource detailing head-to-toe surgical procedures for a broad range of conditions. The senior editors have more than 50 years of collective surgical experience and expertise training hundreds of medical students and plastic surgery residents. A distinguished and diverse group of contributors from more than 15 countries and five continents share clinical pearls throughout the book.

Sixty-seven chapters organized in five sections start with head and neck chapters detailing cleft palate defects and repair, followed by functional rhinoplasty, neoplasms, and trauma. Section two encompasses breast reduction/reconstruction techniques and other breast deformities; and management of trunk ulcers, deep wounds, and defects. The hand and upper extremity section details reconstructive techniques for infections, trauma, and Dupuytren's contracture. The final two sections cover a wide spectrum of nerve-related conditions and syndromes, followed by burns, melanoma, and vascular anomalies.

Key Features

- High-quality illustrations and intraoperative photographs enhance understanding of step-by-step operative procedures
- More than 30 procedural videos provide hands-on guidance on how to perform specific steps in reconstructive plastic surgery
- A broad range of reconstructive techniques cover trauma, tumor resection, burns, congenital deformities, and degenerative conditions
- Consistent chapter formatting includes a clear and concise introduction, discussion of pertinent anatomy, surgical indications, operative techniques, complications, and long-term results

This highly accessible yet comprehensive procedural guide is must-have reading for medical students, plastic surgery residents, and early-career plastic surgeons. It will also benefit veteran reconstructive plastic surgeons looking for a robust refresher with an international perspective.

**COMPETITION**

**CONTENTS**

**Section I Head and Neck**

*Subsection IA Congenital Defects*

1. Primary/Secondary Cleft Palate Repair
2. Cleft Lip and Nose Repair
3. Velopharyngeal Insufficiency
4. Velopharyngeal Insufficiency: Pharyngoplasty
5. Cleft Lip Nasal Deformity Repair
7. Ear Reconstruction
8. Otoplasty

*Subsection IB Functional Rhinoplasty*

9. Open Rhinoplasty
10. Closed Rhinoplasty Techniques

*Subsection IC Neoplasms*

11. Treatment of Skin Cancer of the Head and Neck
12. Reconstruction after Neoplasm Resection with Regional Flaps
13. Reconstruction after Head and Neck Neoplasm Resection with Free Flaps
14. Lip Reconstruction
15. Eyelid Reconstruction
16. Nasal Reconstruction
17. Cheek Reconstruction

*Subsection ID Trauma*

18. Mandible Reconstruction
19. Upper Midface Trauma
20. Nasal Fracture
21. Treatment of Orbital Wall Fractures
22. Facial Paralysis

**Section II Breast**

*Subsection IIA Macromastia*

23. Breast Reduction in the Female Patient: General Considerations
24. Wise Pattern, Inferior Pedicle Reduction Mammoplasty
25. Vertical Scar Reduction Mammoplasty
26. Reduction of the Male and Transmale Breast

*Subsection IIB Absent Breast*

27. Breast Reconstruction – General Considerations
28. Breast Reconstruction with Implants or Tissue Expanders
29. Breast Reconstruction with Pedicled Latissimus Dorsi Flap
30. Breast Reconstruction with Pedicled Transverse Rectus Abdominis Flap
31. Breast Reconstruction with Free Transverse Rectus Abdominis Muscle Flap
32. Breast Reconstruction with Free Perforator Flaps
33. Secondary Procedures of the Reconstructed Breast

*Subsection IIC Other Deformities of Breast*

34. Tubular Breast Deformity
35. Poland’s Syndrome

*Subsection IID Trunk*

36. Treatment of Pressure Ulcers
37. Treatment of Pressure Ulcers with Flaps
38. Management of Deep Sternal Wound Infections
39. Reconstruction of Thoracic and Abdominal Defects
40. Vascularized Lymph Node Transfer

Section III Hand and Upper Extremity
41. Hand Infections
42. Fingertip and Nail Bed Injuries
43. Local Flaps for Finger and Hand Reconstruction
44. Extensor Tendon Injuries and Repairs
45. Flexor Tendon Repair
46. Tendon Transfers
47. Nerve Repair
48. Hand Fractures/Dislocations
49. Dupuytren’s Contracture

Section IV Nerve Compression
50. Median Nerve Compression
51. Ulnar Nerve Compression from Wrist to Elbow—Cubital Tunnel and Guyon’s Canal Release
52. Pronator Syndrome
53. Radial Nerve Syndrome
54. Arterial Insufficiency, Reconstruction, and Amputation
55. Acute Compartment Syndrome
56. Arterial Repair, Revascularization, or Replantation of Digit, Hand, or Upper Extremity
57. Rheumatoid Hand
58. Articular Surgery for the Scleroderma Hand: Arthrodesis and Arthroplasty
59. Treatment of Degenerative Arthritis of the Wrist: Arthrodesis and Arthroplasty
60. Thumb Reconstruction: Toe-to-Thumb Transfer
61. Treatment of Tumors of the Hand: Sarcoma
62. Congenital Hand Reconstruction
63. Lower Extremity: Soft Tissue Reconstruction
64. Lower Extremity Wound Treatment with Free Flap

Section V Integument
65. Burn Reconstruction
66. Lesions of the Integument: Treatment of Cancers of the Integument Including Malignant Melanoma
67. Vascular Anomalies and Congenital Nevi
Revised edition of widely acclaimed medical training resource features extensive and invaluable additions

Performing clinical examinations is an important skill developed throughout medical training and vocational experience. For nearly a quarter century, this learner-friendly handbook has filled a gap in the literature by providing an affordable and portable resource on clinical examination best practices. *Essentials of Clinical Examination, 9th Edition* reflects contributions from 119 medical students, 44 residents, 16 artists, 6 layout editors, and 38 esteemed faculty members at the University of Toronto. Supported by Toronto Medical Student Publications, each chapter has been thoroughly reviewed by expert residents and faculty members in their respective specialties to ensure the highest caliber content.

Created by health learners for health learners, this highly accessible, evidence-informed reference is indispensable for clinical rotations and OSCE preparation. All 24 chapters underwent extensive revisions to reflect the most pertinent, up-to-date information. Section one provides overviews of major anatomy and body systems, while section two is organized by subspecialty. Each of the subspecialty chapters is consistently formatted with detailed and clear explanations covering clinical history, common presentations, differential diagnoses with distinguishing clinical features, and physical examination maneuvers.

**Key Highlights**

- The addition of new summary tables, detailed diagrams, and improved graphics enhance understanding and retention of knowledge
- New social, pediatric, and geriatric awareness pearls help learners better contextualize concepts through a culturally and socially sensitive lens
- Integrated clinical questions at the end of each chapter enable readers to consolidate knowledge and apply it to real-life situations encountered during rotations

The latest edition of this long heralded guide is must-have reading for residents, clerks, and medical students to inform and practice core clinical examination skills that are essential to effective patient management.

This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

EDITORS
Ankit I. Mehta, MD, FAANS, FACS, is a Neurosurgeon and Associate Professor, Director of Spinal Oncology; Associate Program Director, Neurosurgical Residency Program, Department of Neurosurgery; and Adjunct Professor of Chemical Engineering and Orthopedic Surgery, University of Illinois at Chicago, Chicago, Illinois, USA.

DESCRIPTION
A state-of-the-art resource on current and future advances in the treatment of intradural spinal tumors

Tumors of the spinal canal provide unique challenges in terms of surgical approaches and oncological treatment. Management requires in-depth knowledge of the intricate anatomical relationships between the tumors and normal spinal pathways, restricted corridors of entry, and limitations of drug penetration. Over the past few decades, significant strides have been made in the treatment of these tumors. Development of minimally invasive techniques and greater understanding of these pathologies has resulted in improved safety, precision, and outcomes. Tumors of the Spinal Canal: Surgical Approaches and Future Therapies by Ankit I. Mehta and esteemed contributors is the most comprehensive textbook written to date on this topic.

The book starts with two opening chapters covering an overview and anatomy, followed by three sections and 11 chapters on intramedullary spinal tumors, intradural extramedullary tumors, and peripheral nerve tumors. The comprehensive review encompasses anatomy, pathophysiology, therapeutic and surgical advances, diverse surgical techniques, and future directions. Throughout the text, readers are provided with the necessary tools to master management of these clinically difficult tumors, from both a medical and surgical standpoint.

Key Highlights

- Treatment algorithms, clinical study summaries, and differential diagnoses presented in reader-friendly tables enhance acquisition and retention of knowledge
- Comprehensive analyses and pearls from masters provide insights on how to manage complications and improve patient outcomes
- Discussion of current research innovations, clinical trials, and future directions that have the potential to change the treatment paradigm

Neurosurgical residents, spine fellows, and complex spine surgeons will benefit from reading this resource, while the intradural spinal tumor treatment paradigms provide an invaluable clinical tool for neurooncologists and oncologists.

COMPETITION
There is no current text on the market that specifically deals with spinal cord tumors.
CONTENTS

Chapter 1 Overview of Spinal Canal Tumors
Chapter 2 Anatomy of the Spinal Cord and Nerve Roots
Chapter 3 Intramedullary Spinal Tumors: Histopathology and Radiology
Chapter 4 Intramedullary Spinal Tumors
Chapter 5 Electrophysiological Testing for Intramedullary Spinal Tumor Surgery
Chapter 6 Intramedullary Spinal Cord Tumors: Current Research and Potential
Chapter 7 Intradural Extramedullary Spinal Tumors: Histopathology and Radiology
Chapter 8 Treatment of Intradural Extramedullary Spinal Tumors
Chapter 9 Minimally Invasive Approaches to Intradural Extramedullary Tumors
Chapter 10 Intradural Extramedullary Spinal Cord Tumors: Current Research and Potential
Chapter 11 Peripheral Nerve Tumor: Histopathology and Radiology
Chapter 12 Treatment of Peripheral Nerve and Paraspinal Tumors
Chapter 13 Peripheral Nerve and Paraspinal Tumors: Future Directions of Therapy
The one-stop guide to microsurgical and endoscopic treatment of skull base lesions from global experts

A deep knowledge of regional anatomy, improved understanding of pathologies and their behaviors, technological advances, and multidisciplinary collaboration have led to more effective treatments for once inoperable skull base lesions. *Microsurgical and Endoscopic Approaches to the Skull Base: Anatomy, Tactics, and Techniques* by renowned skull base neurosurgeons Luis A. B. Borba and Jean G. de Oliveira presents a balanced, anatomy-based perspective on microsurgical and endoscopic approaches to manage these highly challenging lesions. The text leverages the best current scientific literature on this topic and insights from global skull base surgery experts.

Organized into 9 sections and 52 chapters, the book starts with discussion of microsurgical and endoscopic instrumentation and neurophysiological monitoring. The subsequent sections cover diverse approaches for skull base lesions involving the sphenoid and parasellar, orbit, anterior fossa, cavernous sinus, temporal bone and jugular foramen, and foramen magnum regions. Each of these sections starts with an introduction, followed by a microsurgical description of the anatomy of the impacted region.

Key Highlights

- Contributions from an impressive group of internationally renowned neurosurgeons and otolaryngologists specializing in skull base pathologies
- Indications, preoperative and postoperative concerns, nuances, pitfalls, tactics, techniques, and references for further reading provide a comprehensive guide to treatment
- A stepwise description of the approach, high-quality four-color drawings, and illustrative cases facilitate acquisition and retention of knowledge
- High-quality figures provide greater visual insights and step-by-step guidance on how to perform specific procedures
This unique textbook will help residents, fellows, and practitioners in neurosurgery and otolaryngology make an evidenced-based decision on using the most effective microsurgical and/or endoscopic approach to achieve the best outcomes in patients with skull base lesions.

47. Supracerabellar Infratentorial Approach: Endoscopic Perspective
48. Supracerabellar Transtentorial Approach

**Section IX: Cerebrovascular Management for Skull Base Surgery**
49. STA-MCA Bypass
50. High-Flow Cervical Carotid Artery to Middle Cerebral Artery Bypass
51. Intracranial–Intracranial Bypass for Treatment of Complex Vascular Lesions and Tumors
52. Endoscopic Endonasal Approaches for the Treatment of Vascular Lesions
Management of Complications in Common Hand and Wrist Procedures: FESSH Instructional Course Book 2021

**Editors**

Brigitte van der Heijden, MSc, MD, PhD, is Plastic Surgeon and Chairman, Department of Plastic Surgery, Jeroen Bosch Hospital, ’s-Hertogenbosch, the Netherlands; and Radboud University Medical Center, Nijmegen, the Netherlands.

Jan-Ragnar Haugstvedt, MD, PhD, is Division Chair of Hand Surgery and Consultant Hand Surgery, Department of Orthopaedics, Østfold Hospital Trust, Moss, Norway.

Henk Coert, MD, PhD, is Professor and Chairman, Department of Plastic Surgery, UMC Utrecht, Utrecht, the Netherlands.

**Description**

Operative complications can have a major impact on patients and surgeons. While most textbooks list them, few provide in-depth discussion on prevention, repercussions, and methods to resolve them. *Management of Complications in Common Hand and Wrist Procedures: FESSH Instructional Course Book 2021*, edited by renowned hand surgeons Brigitte van der Heijden, Jan-Ragnar Haugstvedt, and Henk Coert, features contributions from an impressive group of international hand surgery experts.

This book provides in-depth, illustrated coverage on the prevention and management of complications that can occur during common hand and wrist approaches. It also provides insights on how meticulously performed hand therapy can help alleviate postsurgical problems, on the complex regional pain syndrome (CRPS), and on critical social issues.

**Key Highlights**

- Firsthand clinical pearls, evidence-based interventions, and expert opinion for preventing and resolving complications from distinguished hand surgery experts
- The history of the catch-all term CRPS, why continued use of this term is a disservice to patients and medical progress, and an evidence-based argument on why it should be removed from the armamentarium and eventually the literature
- Managing expectations of patients with factitious disorders, the role of informed consent in preventing medicolegal issues, and the impact of complications on surgeons and patients

This unique and insightful resource will be invaluable in the practice of plastic, orthopaedic, and trauma surgeons specializing in hand and wrist surgery.

This book includes complimentary access to a digital copy on [https://medone.thieme.com.](https://medone.thieme.com.)

**Section 1 Tendon Surgery**
1. Management of Complications of Flexor Tendon Surgery
2. Management of Complications of Extensor Tendon Surgery
3. Treatment of Complications after Surgical Management of Tenosynovitis

**Section 2 Nerve Surgery**
5. Management of Complications of Surgery of the Median, Ulnar and Radial Nerves in the Forearm
6. Management of Complications of Nerve Decompression Surgery

**Section 3 Bone Surgery: Fracture**
7. Management of Finger Fracture Complications
8. Management of Complications in Carpal Fractures (Malunion, Nonunion)
9. Management of Complications of Scaphoid Fracture Fixation
10. Management of compiliation in Lunate Facet Fracture Fixation
11. Management of Complications Following Open Reduction and Plate Fixation of Distal Radius Fractures
12. Management of Distal Radius Malunion

**Section 4 Bone Surgery: Arthritis**
15. Treatment of Complications of Midcarpal Joints Arthritis

**Section 5 Ligament Surgery**
17. Management of Complications of Ligament Repair of Thumb and Finger Joints
18. Treatment of Complications after Scapholunate Ligament Repair
19. Management of Complications Following Surgery to the Triangular Fibrocartilage Complex

**Section 6 Soft-Tissue Surgery**
20. Complications Following Treatment of Dupuytren's Disease and Their Management
21. Management of Complications in the Treatment of Fingertip Injuries

**Section 7 Rehabilitation: How to Prevent and Manage Complications by Hand Therapy**
22. Flexor Tendon Repair in Zone 2: Prevention and Management of Complications by Hand Therapy
23. Peripheral Nerve Surgery: Prevention and Management of Complications by Hand Therapy

**Section 8 CRPS**
25. Debunking Complex Regional Pain Syndrome/Sudeck/Reflex Sympathetic Dystrophy

**Section 9 Social Issues**
26. Managing Expectations/Factitious Disorders
27. Informed Consent/How to Prevent Medicolegal Issues

29. Complications: What They Do to the Patient
A beautifully illustrated, multimedia guide to facial soft-tissue reconstruction from leading clinicians

Principles of Facial Reconstruction: A Subunit Approach to Cutaneous Repair, Third Edition by distinguished clinicians Wayne F. Larrabee Jr., David A. Sherris, Jeffrey C. Teixeira, and esteemed contributors presents evidence-based facial reconstruction techniques that simplify flap design based on location and defect. The book’s primary focus is soft-tissue defects of moderate size rather than larger flap reconstructions. Building on the acclaimed prior editions, the third edition features new content and images.

Key surgical principles are detailed graphically in an easy-to-navigate, concise layout. The two opening chapters cover a review of soft-tissue biomechanics and physiology, followed by fundamentals of wound closure, wound healing, grafts, and flaps. The seven consistently organized anatomic chapters present a brief overview of the anatomy of the region, followed by succinct descriptions of surgical approaches for relevant subunits in that region. The final two chapters provide details on free flaps and graft harvesting techniques. The reader-friendly format enables quick determination of the most reliable reconstruction options for repair of the scalp, forehead, eyes, nose, cheek, ears, and lips and chin.

Key Features

- Firsthand experience from renowned experts on the most reliable defect reconstructions
- Full-color clinical photographs, around 500 high-quality illustrations, and diagrams provide precise insights on key surgical concepts
- Following a facial unit principle, decision-making algorithms guide readers on selection of the most effective flap or graft for each case

This is a must-have resource for plastic surgeons, otolaryngologists, and oral-maxillofacial surgeons, and dermatology residents and fellows, as well as surgeons specializing in the field of facial plastic surgery.

Chapter 7: Cheek  
Chapter 8: Ears  
Chapter 9: Lips and Chin  
Chapter 10: Graft Harvest Techniques
Learn to master cleft palate and lip repair techniques with high-quality videos by renowned surgeons

In cleft surgery, a detailed understanding of the steps in the operation is uncompromisingly important to learning and mastering techniques. Step-by-step illustrations and photographs still leave much of the story untold. *The Duke Cleft Video Collection* by Jeffrey R. Marcus and Anna R. Carlson fills all gaps in existing step-wise instructional materials that have been the mainstay of traditional surgical teaching. ‘While a picture tells a thousand words, a video tells a million.’ This remarkable video collection provides unparalleled visual insights on a comprehensive selection of core surgical procedures for repair of cleft lip and palate. Presented on a convenient flash drive with a concise supplementary booklet, the videos feature a novel capture method, high-quality production, and expert insights.

Key features of the video collection:

- The intraoral videoscopic method, developed by the authors, provides a complete field of view of procedures that are challenging to teach and learn otherwise due to visibility constraints in the surgical field
- Different approaches for a wide range and severity of deformities are presented, covering flaps, bone grafting, and revision surgeries
- Twenty-seven high-quality videos with nearly six hours of total footage encompass a full spectrum of cleft repair procedures across the age continuum

This is a must-have, insightful video companion for pediatric plastic reconstructive and maxillofacial surgeons to access on computers, smartphones, or tablets. This book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

Mohs Micrographic Surgery
From Layers to Reconstruction
1st Edition

Christopher B. Harmon, MD, FAAD, FACMS, is a Dermatologic Surgeon, Surgical Dermatology Group, and Director of the ACGME Fellowship in Micrographic Surgery and Dermatologic Oncology, Birmingham, Alabama, USA.

Stanislav N. Tolkachjov, MD, FAAD, FACMS, is a Dermatologic Surgeon and the Dallas-Fort Worth Area Director of Mohs Micrographic & Reconstructive Surgery at Epiphany Dermatology; Clinical Assistant Professor at University of Texas, Southwestern and VA Medical Center, Dallas, Texas, USA.

A systematic approach to Mohs surgery and reconstruction from renowned skin cancer surgeons

More than 5.4 million cases of nonmelanoma skin cancer, most notably basal cell, squamous cell carcinoma, and melanoma, occur annually in the United States alone. The Mohs technique, developed in the 1950s and refined over the years, has the highest cure rate of any treatment for nonmelanoma skin cancer, is used increasingly for melanoma, and the lowest recurrence rate. Mohs Micrographic Surgery: From Layers to Reconstruction by renowned dermatologic and Mohs surgeons Christopher Harmon and Stanislav Tolkachjov provides a detailed yet succinct road map to learning and mastering Mohs and reconstruction.

The algorithmic organization coupled with instructive photographs and illustrations provide a reader-friendly format conducive to learning. The two opening chapters describe the principles of Mohs surgery including: progressive layer excision to determine if wound margins are cancer free, associated pitfalls, recurrences, special sites, reconstructive principles, and general considerations. The subsequent eight chapters are organized by facial site, from the nose to the eyelid/eyebrow. The final two chapters discuss combination reconstructions stretching over multiple subunits and perioperative management and wound care.

Key Highlights

- An impressive group of global Mohs and reconstruction experts provide firsthand pearls that guide optimal treatment
- Relevant anatomical aspects that impact excision and reconstruction are detailed, including structures, skin tension lines, tissue planes, and dangers zones
- More than 20 procedural videos provide hands-on guidance on how to perform specific steps in Mohs and reconstruction

This unique resource will help residents, fellows, and surgeons in dermatology, plastic surgery, and facial plastic surgery master nuances of Mohs reconstructive techniques to achieve the most functional and aesthetically pleasing outcomes for patients.

DESCRIPTION

A case-based guide to the interventional management of stroke from leading international experts!

Stroke is the most prevalent cerebrovascular emergency, impacting an estimated 15 million people worldwide every year. Endovascular treatment (EVT) of ischemic stroke has expanded at an unforeseen pace, with EVT the most common neurointerventional procedure performed at most large centers. Endovascular Management of Ischemic Stroke: A Case-Based Approach by renowned stroke pioneer Vitor Mendes Pereira and distinguished co-editors features contributions from a 'who's who' of global experts. This practical resource provides straightforward guidance for clinicians who need to learn and master state-of-the-art endovascular interventions reflecting the new, evidenced-based treatment paradigm for acute stroke.

This carefully crafted reference takes readers on a journey from the early building blocks that led to modern stroke interventions to meticulous step-by-step descriptions of the latest approaches. Fifty high-yield cases mirror real-life scenarios trainees and professionals are likely to encounter in clinical practice. Seven sections encompass a full spectrum of diverse patient presentations, anatomical variations, advanced techniques, complex pathologies, complications, and stroke mimics.

Key Highlights

• Discussion of emerging techniques likely to stand the test of time such as SAVE, ARTS, transradial access, and transcarotid access
• Stroke mimics important for differential diagnoses, including hemiplegic migraine, MELAS, RCVS, seizure, and more
• An appendix that covers fundamental terms, trials, and tools

This cutting-edge resource is essential reading for trainee and early-career interventionalists, as well as seasoned practitioners in interventional radiology, neuroradiology, endovascular neurosurgery, and interventional neurology.

Appendix: Essential Terms, Trials, and Tools
The quintessential guide to endoscopic skull base reconstruction from multidisciplinary experts

Due to close collaboration between otorhinolaryngologists and neurosurgeons, endoscopic endonasal brain surgery has become part of the surgical armamentarium for successful treatment of various cranial base pathologies. Today, it is considered the gold standard surgical technique for many types of skull base tumors. *Techniques and Key Points for Endoscopic Cranial Base Reconstruction* by pioneering otorhinolaryngologist Carlos D. Pinheiro-Neto and neurosurgeon Maria Peris-Celda, co-editor of Thieme’s acclaimed *Rhoton’s Atlas of Head, Neck, and Brain*, encompasses the most important endoscopic cranial base reconstruction techniques performed in the last two decades. The book features contributions from an impressive group of additional experts in this field.

Comprised of 26 reader-friendly chapters divided into seven sections, the book starts with discussion of general principles of endoscopic cranial base reconstruction. Sections II through VI provide step-by-step descriptions of reconstructive approaches utilizing diverse flaps including nasoseptal, intranasal, extranasal, and free grafts, followed by free flaps. The final section details management of seven challenging cases that enrich practical clinical experience, from free flap reconstruction to recalcitrant cerebrospinal fluid leak.

**Key Highlights**

- Decision-making rationales and pearls regarding selection of the most efficacious reconstructive techniques.
- Consistently formatted chapters feature a succinct review of anatomical concepts integral to each procedure, detailed descriptions for each surgical step, and alternative options.
- High-quality and meticulous anatomical dissections performed at the editors’ anatomy laboratory and beautiful illustrations depict the flow of operations essential to understanding surgical nuances.
- Nineteen narrated videos visually demonstrate techniques and consolidate learning.

This must-have, comprehensive resource will help skull base surgeons master the latest techniques, avoid complications, and achieve improved outcomes for their patients.

The Frontal Sinus
Surgical Approaches and Controversies
1st Edition

Christos Georgalas, MD, PhD, DLO, FRCS (ORL-HNS), FEBORL-HNS(Hon), is Professor of Head and Neck Surgery, University of Nicosia Medical School, Nicosia, Cyprus; and Director of Endoscopic Skull Base Centre, Hygeia Hospital, Athens, Greece.

Anshul Sama, MBBS, FRCS (Gen Surg), FRCS (ORL-HNS), is Consultant Rhinologist and Endoscopic Skull Base Surgeon, Nottingham University Hospital NHS Trust, Nottingham, UK.

This book will be a valuable resource for novice surgeons approaching one of the most challenging anatomical subsites, since it provides a stepwise approach to understanding the anatomical background, the radiological aspects, and the broad spectrum of different surgical approaches to the frontal sinuses. The authors are to be congratulated for this masterpiece, which will become the gold standard for experts and beginners. —Paolo Castelnuovo

Edited by renowned rhinologists and skull base surgeons Christos Georgalas and Anshul Sama, this complete guide to frontal sinus surgery covers surgical anatomy and radiology, frontal-specific pathology, surgical techniques, technical advancements, and controversies. It focuses on those starting surgical practice and it is also of interest to well-established surgeons.

This book brings together some of the leading surgeons across the globe to provide varied and complementary perspectives. The content is organized in five sections: surgical anatomy, specific conditions of the frontal sinus, open surgical approaches, endoscopic surgical approaches, and controversies.

Key Features

- More than 600 full-color images and diagrams illustrating surgical concepts and demonstrating detailed techniques
- Stepwise descriptions of surgical techniques with a "tips and tricks" section in each chapter drawn from the authors' experience
- Clinical case presentations in each chapter illustrating key concepts and techniques
- A truly global and balanced perspective with world-leading authors from all continents
- Controversial topics analyzed from evidence-based medicine (EBM) perspective

This is a must-have resource for otolaryngology–head and neck surgery residents, fellows, and specialists that may also benefit neurosurgeons, maxillofacial surgeons, plastic surgeons, and other clinicians who deal with this challenging and complex area.

CONTENTS
Section I Anatomy of the Frontal Sinus and Frontal Recess
Chapter 1 The developmental bases of the anatomy of the frontal sinuses
Chapter 2 Radiological Anatomy
Chapter 3 Applied Surgical Anatomy
Section II Endoscopic Surgical Approaches to Frontal Sinus Disease
Chapter 4 Balloon Sinuplasty
Chapter 5 Draf Frontal Sinusotomy I – IIa
Chapter 6 Draf IIb
Chapter 7 Draf Ilc / Extended Draf IIb / Mini-Lothrop (uni-transseptal approach)
Chapter 8 Frontal Sinus Rescue
Chapter 9 Draf III Frontal Sinusotomy
Chapter 10 Transseptal approach
Chapter 11 Endoscopic endonasal orbital transposition for lateral frontal sinus I
Chapter 12 The role of Frontal sinus in anterior skull base / transcribriform approach
Chapter 13 Extended endonasal anterior skull base approaches
Chapter 14 Revision endoscopic frontal sinus surgery
Chapter 15 Complications of frontal sinus surgery
Chapter 16 Delivery of topical therapy to the frontal sinus
Chapter 17 Postoperative Management – Dressings and Toilet
Chapter 18 Office based frontal sinus procedures
Section III Open Surgical Approaches to Frontal Sinus Disease
Chapter 19 Mini and Maxi-Trephines
Chapter 20 Osteoplastic Flaps approach (With/ Without Obliteration)
Chapter 21 Cranialization and Riedel’s
Section IV Management of Specific Frontal Sinus Conditions
Chapter 22 Frontal sinus Barosinusitis
Chapter 23 Frontal sinus in CF / Frontal sinus in Pediatric Patients
Chapter 24 Expansile frontal sinus / Pneumocele / Pneumosinus dilatans
Chapter 25 Frontal sinus in CRSsNP
Chapter 26 Frontal sinus in CRSwNP/AFS / ASA triad
Chapter 27 Frontal Sinus Mucoceles
Chapter 28 Frontoethmoidal Osteomas
Chapter 29 Frontal Inverted Papilloma
Chapter 30 Frontal Sinus Fibrous Dysplasia / Ossifying Fibroma
Chapter 31 Malignant Disease involving the Frontal Sinus
Chapter 32 Acute Frontal Osteomyelitis and Intracranial and Orbital complications
Chapter 33 Fungal Frontal Sinusitis – Allergic and Non-allergic
Chapter 34 Frontal Sinus Trauma and its Management
Chapter 35 CSF leak in the frontal sinus - endoscopic management
Section V Controversial Topics in Current Practice
Chapter 36 The use of flaps in Frontal sinus surgery
Chapter 37 Osteitis and frontal sinus
Chapter 38 Extreme lateral lesions - what is the limit of endoscopic surgery?
Chapter 39 Use of Image-guidance Technology – Mandatory or Not
Chapter 40 Balloon Technology in the Frontal Sinus - Useful or Gimmick?
Chapter 41 Minimum vs. Maximal Surgical Sinusotomy
Chapter 42 PROMS and Outcomes in Frontal sinus surgery - do they make a difference?
Chapter 43 Symptoms of Frontal Sinus Disease: Where is the evidence?
Chapter 44 Anatomy and Classification of Fronto-ethmoidal Cells / Ostium or pathway?
Chapter 45 Drill or Not to Drill
Chapter 46 Indications for Operating in the Frontal Sinus – Primary Surgery or Always Second-line?
Chapter 47 Economic and QOL evaluation of surgery versus medical treatment
Chapter 48 Training models and techniques in frontal sinus surgery
Chapter 49 Augmented reality in frontal sinus surgery
Chapter 50 Robotic surgery - beyond Da-Vinci
The quintessential reference on surgical and medical management of thyroid and parathyroid

Head & Neck Endocrine Surgery: A Comprehensive Textbook, Surgical, and Video Atlas by renowned head and neck surgical oncologist David Goldenberg, with chapters by esteemed contributors from various fields, is the most comprehensive textbook written on this topic to date. It covers all aspects of medical and surgical management of thyroid and parathyroid disease. In addition to classic and cutting-edge surgical procedures, the text discusses novel topics such as molecular testing, radiofrequency ablation of thyroid nodules, risk stratification, pathology, and remote access surgical techniques.

The book is organized in seven sections and 62 succinct chapters featuring a unique layout conducive to modern learning. Five sections on the thyroid gland start with historical perspectives and basic science, concluding with postoperative management and therapies including ethical and medicolegal concerns. The last two sections focus on historical perspectives, basic science, and surgical management of parathyroid diseases.

Key Highlights

- Well-illustrated high-yield case studies, key points, pearls, points to ponder, and annotated bibliographies noting the top references enhance acquisition of knowledge
- The text encompasses a full spectrum of thyroid and parathyroid diseases
- 29 narrated high-quality videos provide nuanced insights about physical appearance not realized solely from intraoperative photographs or illustrations

This is an essential resource for otolaryngologists–head and neck surgeons, endocrine surgeons, general surgeons, endocrinologists, residents, fellows, and allied health personnel.

4 Pathology of Thyroid Gland Neoplasia
5 Molecular Characterization of Thyroid Neoplasia
6 Thyroid Cytopathology
7 Medical Management of Thyroiditis and Hypothyroidism
8 Medical Management of Papillary Thyroid Microcarcinoma
9 Hyperthyroidism: Graves’ Disease and Toxic Nodules
10 The Contemporary Workup of the Thyroid Nodule

Section II. Surgical Management of Thyroid Disease

11 Decision-Making and Perioperative Assessment in Thyroid Surgery
12 Anesthesia Considerations for Thyroid and Parathyroid Surgery
13 Preoperative Imaging Applications in the Central Neck
14 Preoperative Evaluation of Cervical Lymph Nodes
15 Preoperative Examination of the Larynx in Thyroid Surgery
16 The Professional Voice and Thyroid Surgery: Special Considerations

Section III. Specific Surgical Applications for Thyroid Disease

17 Surgery for Ectopic Thyroid Tissue and Thyroglossal Duct Cyst
18 Surgery for Graves’ Disease and Hyperthyroidism
19 Cervical and Mediastinal Goiter
20 Thyroid Cancer: Risk Assessment and Stratification
21 Papillary Carcinoma of the Thyroid
22 Management of Papillary Thyroid Microcarcinoma
23 Follicular and Hürthle Carcinoma of the Thyroid
24 Medullary Carcinoma of the Thyroid: Sporadic, Familial and MEN Syndromes
25 Anaplastic Thyroid Carcinoma
26 Lymphoma and Lymphoproliferative Disorders of the Thyroid Gland
27 Pediatric Thyroid Cancer
28 Surgery for Locally Aggressive Thyroid Cancer
29 Hereditary Nonmedullary Thyroid Carcinoma

Section IV. Special Considerations and Techniques in Thyroid Surgery

30 Minimally Invasive Video-Assisted Thyroidectomy (MIVAT)
31 Surgical Anatomy of the Superior Laryngeal Nerve
32 Surgical Anatomy and Monitoring of the Recurrent Laryngeal Nerve
33 Central Neck Dissection: Indications and Technique
34 Lateral Neck Dissection: Indications and Technique
35 Thyroid Radiofrequency Ablation of Benign Nodules
36 Transoral Thyroid Surgery
37 Facelift Approach to Thyroid Surgery
38 Robotic Assisted Thyroid Surgery
39 Revision Thyroid Surgery
40 Management of Recurrent Laryngeal Nerve Paralysis: Injury and Intraoperative Repair

Section V. Postoperative Considerations and Therapy

41 Postoperative Management in Thyroid Surgery (Normal and Complicated)
42 Radioactive Iodine Applications
43 External Beam Radiation Therapy for Thyroid Malignancy
44 Treatment of Advanced Thyroid Cancer: The Era of Targeted Modalities
45 Ethical and Medicolegal Aspects of Thyroid Surgery
46 Thyroid Cancer Survivorship

Section VI. Historical Perspectives and Basic Science of the Parathyroid

47 The History of Parathyroid Surgery
48 Embryology of the Parathyroid Glands
49 Pathology of the Parathyroid Glands
50 Parathyroid Physiology and Calcium Homeostasis
51 Parathyroid Imaging and Preoperative Localization
52 Medical Management of Parathyroid Disease

Section VII. Surgical Management of Parathyroid Disease
53 Primary Hyperparathyroidism: Pathophysiology and Surgical Indications
54 Surgical Management of Primary Hyperparathyroidism
55 Conventional Four-Gland Parathyroid Exploration
56 Radioguided Parathyroid Surgery
57 Intraoperative Parathyroid Hormone Assessment and Applications
58 Surgical Management of Multiglandular Hyperparathyroidism
59 Surgical Management of Secondary and Tertiary Hyperparathyroidism
60 Familial Hyperparathyroidism and the MEN Syndromes: Parathyroid Management
61 Management of Parathyroid Carcinoma
62 Unsuccessful and Revision Parathyroid Surgery

A comprehensive and user-friendly guide on leveraging OCT for the management of glaucoma

Optical coherence tomography (OCT) is a noninvasive diagnostic imaging modality that enables ophthalmologists to visualize different layers of the optic nerve and retinal nerve fiber layer (RNFL) with astounding detail. Today, OCT is an instrumental tool for screening, diagnosing, and tracking the progression of glaucoma in patients. Optical Coherence Tomography in Glaucoma by renowned glaucoma specialist Jullia A. Rosdahl and esteemed contributors is a one-stop, unique resource that summarizes the clinical utility of this imaging technology, from basics to advanced analyses.

The book features 14 chapters, starting with introductory chapters that discuss development of OCT and its applications for visualizing the optic nerve and macula. In chapter 5, case studies illustrate OCT imaging of the optic nerve, RNFL, and macula in all stages of glaucoma, from patients at risk to those with mild, moderate, and severe diseases. The next chapters cover the intrinsic relationship between optic nerve structure and function, the use of structure–function maps, and examples of their relationship, followed by a comparison of commonly used devices and a chapter on artifacts. Anterior segment OCT is covered next, followed by chapters covering special considerations in pediatric glaucomas and in patients with high refractive errors. The final chapters cover innovations in OCT on the horizon including OCT angiography, swept-source OCT, and artificial intelligence.

Key Highlights

- Illustrative case examples provide firsthand clinical insights on how OCT can be leveraged to inform glaucoma treatment.
- In-depth guidance on recognizing and managing artifacts including case examples and key technical steps to help prevent their occurrence.
- Pearls on the use of OCT for less common patient scenarios such as pediatric glaucomas and high refractive errors.
- Future OCT directions including angiography, swept-source, and the use of artificial intelligence.

This practical resource is essential reading for ophthalmology trainees and ophthalmologists new to using OCT for glaucoma. The pearls, examples, and novel topics in this book will also help experienced clinicians deepen their knowledge and increase confidence using OCT in daily practice.

EDITORS
Julie M. Skrzat, PT, DPT, PhD, CCS, is Assistant Professor, Doctor of Physical Therapy Program, Murphy Deming College of Health Sciences, Mary Baldwin University, Fishersville, Virginia, USA.

Sean F. Griech, PT, DPT, PhD, OCS, COMT, is Assistant Professor, Doctor of Physical Therapy Program, DeSales University, Center Valley, Pennsylvania, USA.

DESCRIPTION
High-quality clinical case studies provide robust physical therapy learning and teaching tool

Direct access legislation and a growing aging population has led to a greater number of people with medical complexities seeking physical therapy services. To ensure physical therapy students are adequately prepared to enter the demanding workforce, academic educators must provide clinical case studies that match clinical demands. Clinical Case Studies Across the Medical Continuum for Physical Therapists by distinguished editors Julie Skrzat and Sean Griech and an impressive group of expert contributors was developed with that goal in mind.

Twenty medically complex case studies, each with three standalone cases covering three distinct clinical settings, are presented to show medical and physical therapy management throughout the continuum of care. These high-quality case studies cover all the body systems and detail conditions including chronic, neurological, oncologic, and traumatic, which closely mirror cases seen in clinical practice. Each case study includes extensive medical data from an interprofessional team, imaging/diagnostic tests, social history, and physical therapy information. The text promotes interprofessional education by requiring learners to consider elements beyond the physical therapy plan of care.

Key Highlights

- The design of the case studies enables learners to understand disease evolution, progression of medical management, and the reasoning behind subsequent changes in physical therapy care plans
- Questions and answers encompassing all levels of Bloom's Taxonomy, coupled with pause points and key points, promote critical thinking and problem solving
- Six videos demonstrate how experienced clinicians respond to real-time clinical challenges with effective patient management strategies

This must-have resource for doctorate-level physical therapy students promotes synthesis of information across all aspects of care. It provides a multidimensional representation of the patient, facilitating optimization of physical therapy plans of care, both in the classroom and clinic.

COMPETITION  McGraw Hill’s *Physical Therapy Case Files* series:
- *Orthopaedics*, 512 pages, 2013, $45
- *Pediatrics*, 512 pages, 2015, $40
- *Acute Care*, 512 pages, 2013, $45
- *Neurological and Rehabilitation*, 416 pages, 2013, $45
- *Sports*, 496 pages, 2015, $40

CONTENTS
1 Breast Cancer  
2 Burn, Full Thickness  
3 Cerebrovascular Accident from Atrial Fibrillation  
4 Cerebral Palsy  
5 Congestive Heart Failure  
6 Cystic Fibrosis  
7 Diabetes Mellitus  
8 Low Back Pain  
9 Multi Trauma  
10 Non-small Cell Lung Cancer  
11 Normal Pressure Hydrocephalus  
12 Osteoporosis  
13 Pneumonia with COPD  
14 Pregnancy with Pre-clampsia and Post-natal Urinary Incontinence  
15 Intertrochanteric Fracture  
16 Status Post Total Knee Arthroplasty, Resulting in Endocarditis  
17 Spinal Cord Injury  
18 Back Surgery  
19 Vestibular  
20 Adolescent Sports Injury
The Science of Synthesis Editorial Board, together with the volume editors and authors, is constantly reviewing the whole field of synthetic organic chemistry as presented in Science of Synthesis and evaluating significant developments in synthetic methodology. Several annual volumes updating content across all categories ensure that you always have access to state-of-the-art synthetic methodology.

Returns Policy

Effective from 1st January 2009

All consignments by Thieme Publishers are delivered without any automatic returns authorization provision. All returns are governed by the following rules:

General Remarks
- For all returns, authorization is granted strictly at the discretion of the publisher, except for faulty, damaged or wrongly delivered titles (see below)
- The basic principle for returns in any one year is that these should not exceed 5% of the previous year’s net turnover for any one company
- The publisher does not guarantee to send back any products that are outside these returns rules and reserves the right to destroy these without compensation.
- Transport costs for returns are covered by the sender (except for Item 4)

1) Full credit can be granted only if
- prior permission to return has been requested and authorized
- the request for permission to return states invoice number, date, and reason for return
- returns are in mint condition, without defacing marks, stickers or security devices
- the request for return authorization is made at the latest twelve (12) months from invoice date
- returns are made directly to our warehouse address

2) No credit will be granted if products are
- returned without prior authorization
- not returned in a resalable condition as described above
- not accompanied by a delivery note listing invoice numbers and dates
- old or out-of-print editions returned more than three (3) months after publication of the new edition

3) No returns can be accepted or authorized
- if made or requested later than twelve (12) months from invoice date
- if made for the previous edition of a newly published work later than 3 months from publication date
- for offline electronic or audiovisual material for continuation orders, series orders and reduced-price or special priced books or sets
- for books with a selling price value (gross) of less than Euro 50.

4) No prior permission is required for
- imperfect copies
- wrongly delivered books (publisher’s error)
In such cases, please include invoice number, date, and reason for return.

For our full terms and conditions please go to
www.thieme.com/termsoftrade
